Danicopan (Voydeya®)

Alexion Pharma Germany GmbH

**Modul 4 A, Anhang 4-G
Post-hoc Analysen Studie ALPHA**

*Zur Behandlung einer residualen hämolytischen Anämie
bei erwachsenen Patientinnen und Patienten mit
paroxysmaler nächtlicher Hämoglobinurie (PNH) als
Zusatztherapie zu Ravulizumab oder Eculizumab*

Dritter Datenschnitt vom 31.03.2023

Stand: 28.05.2024

Inhaltsverzeichnis

	Seite
Anhang 4-G – Post-hoc Analysen Studie ALPHA; Dritter Datenschnitt vom 31.03.2023	3
1 Morbidität.....	3
1.1 Hämoglobinwert-assoziierte Endpunkte	3
1.1.1 Veränderung des Hämoglobinwertes gegenüber Baseline.....	3
1.1.2 Anstieg des Hämoglobinwertes von ≥ 2 g/dl bei gleichzeitigem Fehlen von Transfusionen	264
1.1.3 Hämoglobin-Normalisierung	278
1.2 Transfusionsvermeidung und -bedarf	292
1.2.1 Transfusionsvermeidung.....	292
1.2.2 Transfundierte Erythrozyten-Einheiten und Transfusionsfälle.....	307
1.3 Veränderung des LDH-Wertes gegenüber Baseline	355
1.4 Veränderung der absoluten Retikulozytenzahl gegenüber Baseline	616
1.5 FACIT-Fatigue-Skala.....	877
1.5.1 Rücklaufquoten der FACIT-Fatigue-Skala.....	877
1.5.2 Veränderung der FACIT-Fatigue-Skala gegenüber Baseline	881
1.6 Symptomatik anhand des EORTC QLQ-C30	1016
1.6.1 Rücklaufquoten des EORTC QLQ-C30	1016
1.6.2 Veränderung der EORTC QLQ-C30 Symptomskalen im Vergleich zu Baseline	1021
1.7 Allgemeiner Gesundheitszustand anhand der EQ-5D VAS.....	2219
1.7.1 Rücklaufquote der EQ-5D VAS	2219
1.7.2 Veränderung der EQ-5D VAS gegenüber Baseline.....	2223
1.8 Work Productivity and Activity Impairment and Activity Impairment:Anemic Symptoms (WPAI:ANS)	2342
1.8.1 Rücklaufquote des WPAI:ANS	2342
1.8.2 Veränderung des WPAI:ANS gegenüber Baseline.....	2345
2 Gesundheitsbezogene Lebensqualität	2446
2.1 Gesundheitsbezogene Lebensqualität anhand des EORTC QLQ-C30	2446
2.1.1 Rücklaufquoten des EORTC QLQ-C30	2446
2.1.2 Veränderung des EORTC QLQ-C30 Gesundheitsstatus und der Funktionsskalen im Vergleich zu Baseline.....	2448
3 Sicherheit	3248
3.1 Unerwünschte Ereignisse.....	3248

Post-hoc Analysen Studie ALPHA

3.1.1 Unerwünschte Ereignisse innerhalb TP1	3248
3.1.2 Unerwünschte Ereignisse innerhalb der gesamten Behandlungsdauer (inkl. TP2 und LTE)	3265
3.2 Unerwünschte Ereignisse nach SOC/PT	3267
3.2.1 Unerwünschte Ereignisse nach SOC/PT innerhalb TP1	3267
3.2.2 Unerwünschte Ereignisse nach SOC/PT innerhalb der gesamten Behandlungsdauer (inkl. TP2 und LTE)	3281
3.3 Unerwünschte Ereignisse von besonderem Interesse (AESI)	3293
3.3.1 Unerwünschte Ereignisse von besonderem Interesse (AESI) innerhalb TP1	3293
3.3.2 Unerwünschte Ereignisse von besonderem Interesse (AESI) innerhalb der gesamten Behandlungsdauer (inkl. TP2 und LTE)	3297
3.4 Hospitalisierungen anhand des Healthcare Resource Utilization (HRU)	3300
3.4.1 Rücklaufquoten des HRU	3300
3.4.2 Veränderung der Hospitalisierungen anhand des HRU im Vergleich zu Baseline	3305
3.4.3 Anteil hospitalisierter Patienten anhand des HRU innerhalb TP1	3413
3.4.4 Listing der hospitalisierten Patienten anhand des HRU	3416
4 Weitere Analysen	3497
4.1 Demographische Charakteristika und Krankheitscharakteristika	3497
4.2 Patienten Disposition	3506
4.3 Behandlungsdauer	3511

Table GERMANY.2.6.2.1
Summary of Actual Values and Change from Baseline in Hemoglobin (g/L)
During Treatment Period 1 and Period 2 and Long Term Extension
Modified Randomized Set

Visit/Statistics	D->D (N = 57)		P->D (N = 26)		Total (N = 83)	
	Actual Value	Change from Baseline	Actual Value	Change from Baseline	Actual Value	Change from Baseline
Baseline						
n	57		26		83	
Mean (SD)	76.7 (9.47)		79.0 (10.42)		77.4 (9.77)	
Median	78.0		80.5		78.0	
Min, Max	55, 94		54, 93		54, 94	
Week 1						
n	50	50	23	23		
Mean (SD)	98.6 (11.73)	21.4 (10.29)	88.1 (15.54)	9.8 (10.18)		
Median	100.0	20.0	84.0	10.0		
Min, Max	70, 122	-2, 45	62, 121	-5, 36		
Week 2						
n	55	55	23	23		
Mean (SD)	104.6 (11.94)	27.8 (12.32)	87.7 (13.38)	9.6 (9.28)		
Median	105.0	26.0	86.0	8.0		
Min, Max	80, 133	3, 55	64, 111	-9, 32		

Baseline is defined as the lowest Hgb value observed between and including Screening and Day 1.

Change from baseline is summarized only for patients who have data at baseline and the specified time point.

Patients were randomized to Danicopan or Placebo for 12 weeks as Treatment Period 1. At Week 12, patients randomized to Placebo were switched to Danicopan for an additional 12 weeks as Treatment Period 2 and patients randomized to Danicopan continued on Danicopan during Treatment Period 2. At the end of the Treatment Period 2 (Week 24), patients entered the Long Term Extension (LTE) Period and continue to receive Danicopan.

D->D: Danicopan at Treatment Period 1 and Danicopan at Treatment Period 2; P->D: Placebo at Treatment Period 1 and Danicopan at Treatment Period 2.

Actual values for Total group is summarized only for baseline and the time points from Long Term Extension (LTE).

Baseline is defined as the lowest Hgb value observed between and including Screening and Day 1.

Change from baseline is summarized only for patients who have data at baseline and the specified time point.

Patients were randomized to Danicopan or Placebo for 12 weeks as Treatment Period 1. At Week 12, patients randomized to Placebo were switched to Danicopan for an additional 12 weeks as Treatment Period 2 and patients randomized to Danicopan continued on Danicopan during Treatment Period 2. At the end of the Treatment Period 2 (Week 24), patients entered the Long Term Extension (LTE) Period and continue to receive Danicopan.

D->D: Danicopan at Treatment Period 1 and Danicopan at Treatment Period 2; P->D: Placebo at Treatment Period 1 and Danicopan at Treatment Period 2.

Actual values for Total group is summarized only for baseline and the time points from Long Term Extension (LTE).

Table GERMANY.2.1.1.1
Change from Baseline in Hemoglobin (g/L) During 12-Week of Treatment Period 1
Analysis Using a Mixed Model for Repeated Measures (MMRM)
Modified Randomized Set

Visit	Statistics	Danicopan (N = 57)	Placebo (N = 25)	Difference (Danicopan-Placebo)	P-value
Week 1	LS Mean (SEM)	20.90 (1.444)	8.65 (2.118)	12.25 (2.545)	<0.0001
	95% CI for LS MEAN	(18.02, 23.78)	(4.42, 12.88)	(7.17, 17.33)	
Week 2	LS Mean (SEM)	27.11 (1.566)	6.89 (2.391)	20.22 (2.841)	<0.0001
	95% CI for LS MEAN	(23.99, 30.23)	(2.13, 11.66)	(14.55, 25.88)	
Week 3	LS Mean (SEM)	29.14 (1.718)	5.95 (2.706)	23.19 (3.190)	<0.0001
	95% CI for LS MEAN	(25.71, 32.57)	(0.56, 11.34)	(16.83, 29.55)	
Week 4	LS Mean (SEM)	30.51 (2.020)	4.56 (3.319)	25.95 (3.873)	<0.0001
	95% CI for LS MEAN	(26.47, 34.55)	(-2.06, 11.18)	(18.22, 33.68)	
Week 6	LS Mean (SEM)	30.12 (1.883)	2.95 (3.046)	27.17 (3.571)	<0.0001
	95% CI for LS MEAN	(26.35, 33.89)	(-3.13, 9.03)	(20.04, 34.30)	
Week 8	LS Mean (SEM)	28.24 (2.059)	4.77 (3.313)	23.47 (3.889)	<0.0001
	95% CI for LS MEAN	(24.13, 32.36)	(-1.83, 11.38)	(15.71, 31.23)	

LS=Least squares; CI=Confidence Interval; SEM=Standard error of the mean.

Baseline is defined as the lowest Hgb value observed between and including Screening and Day 1.

The difference of LSM is calculated as the Danicopan mean minus Placebo mean.

Mixed Model for Repeated Measures (MMRM) includes the fixed, categorical effects of treatment group, study visit, and study visit by treatment group interaction as well as the continuous, fixed covariate of baseline Hgb value and the randomization stratification factor of transfusion history (> 2 or ≤ 2 transfusions within 6 months of Screening). An Unstructured covariance structure was used.

P-value is from difference of LSM from MMRM model.

Hgb values collected within 4 weeks after transfusion are not included in the MMRM model.

Min, Max	77, 131	10, 51	54, 100	-7, 31		

Baseline is defined as the lowest Hgb value observed between and including Screening and Day 1.
Change from baseline is summarized only for patients who have data at baseline and the specified time point.
Patients were randomized to Danicopan or Placebo for 12 weeks as Treatment Period 1. At Week 12, patients randomized to Placebo were switched to Danicopan for an additional 12 weeks as Treatment Period 2 and patients randomized to Danicopan continued on Danicopan during Treatment Period 2. At the end of the Treatment Period 2 (Week 24), patients entered the Long Term Extension (LTE) Period and continue to receive Danicopan.

D->D: Danicopan at Treatment Period 1 and Danicopan at Treatment Period 2; P->D: Placebo at Treatment Period 1 and Danicopan at Treatment Period 2.

Actual values for Total group is summarized only for baseline and the time points from Long Term Extension (LTE).

Change from baseline is summarized only for patients who have data at baseline and the specified time point.

Patients were randomized to Danicopan or Placebo for 12 weeks as Treatment Period 1. At Week 12, patients randomized to Placebo were switched to Danicopan for an additional 12 weeks as Treatment Period 2 and patients randomized to Danicopan continued on Danicopan during Treatment Period 2. At the end of the Treatment Period 2 (Week 24), patients entered the Long Term Extension (LTE) Period and continue to receive Danicopan.

D->D: Danicopan at Treatment Period 1 and Danicopan at Treatment Period 2; P->D: Placebo at Treatment Period 1 and Danicopan at Treatment Period 2.

Actual values for Total group is summarized only for baseline and the time points from Long Term Extension (LTE).

Baseline is defined as the lowest Hgb value observed between and including Screening and Day 1.

Change from baseline is summarized only for patients who have data at baseline and the specified time point.

Patients were randomized to Danicopan or Placebo for 12 weeks as Treatment Period 1. At Week 12, patients randomized to Placebo were switched to Danicopan for an additional 12 weeks as Treatment Period 2 and patients randomized to Danicopan continued on Danicopan during Treatment Period 2. At the end of the Treatment Period 2 (Week 24), patients entered the Long Term Extension (LTE) Period and continue to receive Danicopan.

D->D: Danicopan at Treatment Period 1 and Danicopan at Treatment Period 2; P->D: Placebo at Treatment Period 1 and Danicopan at Treatment Period 2.

Actual values for Total group is summarized only for baseline and the time points from Long Term Extension (LTE).

Table GERMANY.2.6.2.3

Summary of Actual Values and Change from Baseline in Hemoglobin (g/L) During Treatment Period 1 and Period 2
and Long Term Extension by Age at Informed Consent (< 65 and ≥ 65 Years)
Modified Randomized Set

≥ 65 Years

Visit/Statistics	D->D (N = 16)		P->D (N = 6)		Total (N = 22)	
	Actual Value	Change from Baseline	Actual Value	Change from Baseline	Actual Value	Change from Baseline
Week 13						
n	10	10	5	5		
Mean (SD)	104.7 (11.91)	28.4 (10.33)	99.2 (9.86)	18.4 (6.35)		
Median	103.5	31.0	100.0	17.0		
Min, Max	88, 120	12, 45	86, 112	12, 28		
Week 14						
n	13	13	6	6		
Mean (SD)	103.2 (16.50)	26.6 (14.89)	116.7 (19.29)	34.0 (19.95)		
Median	103.0	32.0	113.5	28.0		
Min, Max	70, 125	-5, 46	93, 152	19, 72		
Week 15						
n	12	12	5	5		
Mean (SD)	100.5 (14.07)	24.6 (15.79)	112.8 (11.26)	30.2 (12.17)		
Median	100.0	26.5	110.0	30.0		
Min, Max	78, 125	-6, 50	97, 126	18, 50		

Baseline is defined as the lowest Hgb value observed between and including Screening and Day 1.

Change from baseline is summarized only for patients who have data at baseline and the specified time point.

Patients were randomized to Danicopan or Placebo for 12 weeks as Treatment Period 1. At Week 12, patients randomized to Placebo were switched to Danicopan for an additional 12 weeks as Treatment Period 2 and patients randomized to Danicopan continued on Danicopan during Treatment Period 2. At the end of the Treatment Period 2 (Week 24), patients entered the Long Term Extension (LTE) Period and continue to receive Danicopan.

D->D: Danicopan at Treatment Period 1 and Danicopan at Treatment Period 2; P->D: Placebo at Treatment Period 1 and Danicopan at Treatment Period 2.

Actual values for Total group is summarized only for baseline and the time points from Long Term Extension (LTE).

Min, Max	84, 133	3, 54	64, 111	-9, 27		

Baseline is defined as the lowest Hgb value observed between and including Screening and Day 1.

Change from baseline is summarized only for patients who have data at baseline and the specified time point.

Patients were randomized to Danicopan or Placebo for 12 weeks as Treatment Period 1. At Week 12, patients randomized to Placebo were switched to Danicopan for an additional 12 weeks as Treatment Period 2 and patients randomized to Danicopan continued on Danicopan during Treatment Period 2. At the end of the Treatment Period 2 (Week 24), patients entered the Long Term Extension (LTE) Period and continue to receive Danicopan.

D->D: Danicopan at Treatment Period 1 and Danicopan at Treatment Period 2; P->D: Placebo at Treatment Period 1 and Danicopan at Treatment Period 2.

Actual values for Total group is summarized only for baseline and the time points from Long Term Extension (LTE).

Min, Max	66, 155	-1, 74	57, 131	-5, 47	57, 155	-5, 74

Baseline is defined as the lowest Hgb value observed between and including Screening and Day 1.

Change from baseline is summarized only for patients who have data at baseline and the specified time point.

Patients were randomized to Danicopan or Placebo for 12 weeks as Treatment Period 1. At Week 12, patients randomized to Placebo were switched to Danicopan for an additional 12 weeks as Treatment Period 2 and patients randomized to Danicopan continued on Danicopan during Treatment Period 2. At the end of the Treatment Period 2 (Week 24), patients entered the Long Term Extension (LTE) Period and continue to receive Danicopan.

D->D: Danicopan at Treatment Period 1 and Danicopan at Treatment Period 2; P->D: Placebo at Treatment Period 1 and Danicopan at Treatment Period 2.

Actual values for Total group is summarized only for baseline and the time points from Long Term Extension (LTE).

Patients were randomized to Danicopan or Placebo for 12 weeks as Treatment Period 1. At Week 12, patients randomized to Placebo were switched to Danicopan for an additional 12 weeks as Treatment Period 2 and patients randomized to Danicopan continued on Danicopan during Treatment Period 2. At the end of the Treatment Period 2 (Week 24), patients entered the Long Term Extension (LTE) Period and continue to receive Danicopan.

D->D: Danicopan at Treatment Period 1 and Danicopan at Treatment Period 2; P->D: Placebo at Treatment Period 1 and Danicopan at Treatment Period 2.

Actual values for Total group is summarized only for baseline and the time points from Long Term Extension (LTE).

Baseline is defined as the lowest Hgb value observed between and including Screening and Day 1.

Change from baseline is summarized only for patients who have data at baseline and the specified time point.

Patients were randomized to Danicopan or Placebo for 12 weeks as Treatment Period 1. At Week 12, patients randomized to Placebo were switched to Danicopan for an additional 12 weeks as Treatment Period 2 and patients randomized to Danicopan continued on Danicopan during Treatment Period 2. At the end of the Treatment Period 2 (Week 24), patients entered the Long Term Extension (LTE) Period and continue to receive Danicopan.

D->D: Danicopan at Treatment Period 1 and Danicopan at Treatment Period 2; P->D: Placebo at Treatment Period 1 and Danicopan at Treatment Period 2.

Actual values for Total group is summarized only for baseline and the time points from Long Term Extension (LTE).

Baseline is defined as the lowest Hgb value observed between and including Screening and Day 1.

Change from baseline is summarized only for patients who have data at baseline and the specified time point.

Patients were randomized to Danicopan or Placebo for 12 weeks as Treatment Period 1. At Week 12, patients randomized to Placebo were switched to Danicopan for an additional 12 weeks as Treatment Period 2 and patients randomized to Danicopan continued on Danicopan during Treatment Period 2. At the end of the Treatment Period 2 (Week 24), patients entered the Long Term Extension (LTE) Period and continue to receive Danicopan.

D->D: Danicopan at Treatment Period 1 and Danicopan at Treatment Period 2; P->D: Placebo at Treatment Period 1 and Danicopan at Treatment Period 2.

Actual values for Total group is summarized only for baseline and the time points from Long Term Extension (LTE).

Median	113.0	27.0	114.0	29.0		
Min, Max	80, 125	-6, 44	93, 141	7, 48		

Baseline is defined as the lowest Hgb value observed between and including Screening and Day 1.

Change from baseline is summarized only for patients who have data at baseline and the specified time point.

Patients were randomized to Danicopan or Placebo for 12 weeks as Treatment Period 1. At Week 12, patients randomized to Placebo were switched to Danicopan for an additional 12 weeks as Treatment Period 2 and patients randomized to Danicopan continued on Danicopan during Treatment Period 2. At the end of the Treatment Period 2 (Week 24), patients entered the Long Term Extension (LTE) Period and continue to receive Danicopan.

D->D: Danicopan at Treatment Period 1 and Danicopan at Treatment Period 2; P->D: Placebo at Treatment Period 1 and Danicopan at Treatment Period 2.

Actual values for Total group is summarized only for baseline and the time points from Long Term Extension (LTE).

Mean (SD)	105.6 (12.35)	26.0 (12.96)	84.9 (13.95)	7.1 (6.24)		
Median	106.0	26.0	83.5	7.5		
Min, Max	84, 126	3, 54	64, 106	-6, 17		

Baseline is defined as the lowest Hgb value observed between and including Screening and Day 1.
Change from baseline is summarized only for patients who have data at baseline and the specified time point.
Patients were randomized to Danicopan or Placebo for 12 weeks as Treatment Period 1. At Week 12, patients randomized to Placebo were switched to Danicopan for an additional 12 weeks as Treatment Period 2 and patients randomized to Danicopan continued on Danicopan during Treatment Period 2. At the end of the Treatment Period 2 (Week 24), patients entered the Long Term Extension (LTE) Period and continue to receive Danicopan.

D->D: Danicopan at Treatment Period 1 and Danicopan at Treatment Period 2; P->D: Placebo at Treatment Period 1 and Danicopan at Treatment Period 2.

Actual values for Total group is summarized only for baseline and the time points from Long Term Extension (LTE).

Change from baseline is summarized only for patients who have data at baseline and the specified time point.

Patients were randomized to Danicopan or Placebo for 12 weeks as Treatment Period 1. At Week 12, patients randomized to Placebo were switched to Danicopan for an additional 12 weeks as Treatment Period 2 and patients randomized to Danicopan continued on Danicopan during Treatment Period 2. At the end of the Treatment Period 2 (Week 24), patients entered the Long Term Extension (LTE) Period and continue to receive Danicopan.

D->D: Danicopan at Treatment Period 1 and Danicopan at Treatment Period 2; P->D: Placebo at Treatment Period 1 and Danicopan at Treatment Period 2.

Actual values for Total group is summarized only for baseline and the time points from Long Term Extension (LTE).

Baseline is defined as the lowest Hgb value observed between and including Screening and Day 1.
Change from baseline is summarized only for patients who have data at baseline and the specified time point.
Patients were randomized to Danicopan or Placebo for 12 weeks as Treatment Period 1. At Week 12, patients randomized to Placebo were switched to Danicopan for an additional 12 weeks as Treatment Period 2 and patients randomized to Danicopan continued on Danicopan during Treatment Period 2. At the end of the Treatment Period 2 (Week 24), patients entered the Long Term Extension (LTE) Period and continue to receive Danicopan.

D->D: Danicopan at Treatment Period 1 and Danicopan at Treatment Period 2; P->D: Placebo at Treatment Period 1 and Danicopan at Treatment Period 2.

Actual values for Total group is summarized only for baseline and the time points from Long Term Extension (LTE).

Median	91.5	28.5	110.0	30.0		
Min, Max	75, 145	2, 64	97, 121	23, 30		

Baseline is defined as the lowest Hgb value observed between and including Screening and Day 1.

Change from baseline is summarized only for patients who have data at baseline and the specified time point.

Patients were randomized to Danicopan or Placebo for 12 weeks as Treatment Period 1. At Week 12, patients randomized to Placebo were switched to Danicopan for an additional 12 weeks as Treatment Period 2 and patients randomized to Danicopan continued on Danicopan during Treatment Period 2. At the end of the Treatment Period 2 (Week 24), patients entered the Long Term Extension (LTE) Period and continue to receive Danicopan.

D->D: Danicopan at Treatment Period 1 and Danicopan at Treatment Period 2; P->D: Placebo at Treatment Period 1 and Danicopan at Treatment Period 2.

Actual values for Total group is summarized only for baseline and the time points from Long Term Extension (LTE).

Table GERMANY.2.6.2.8

Summary of Actual Values and Change from Baseline in Hemoglobin (g/L) During Treatment Period 1 and Period 2 and Long Term Extension by the Randomization Stratification Factors of Japanese Patients (Patients Enrolled from Japan [Yes/No]) Modified Randomized Set

Patients Enrolled from Japan No

Visit/Statistics	D->D (N = 49)		P->D (N = 22)		Total (N = 71)	
	Actual Value	Change from Baseline	Actual Value	Change from Baseline	Actual Value	Change from Baseline
Week 8						
n	39	39	20	20		
Mean (SD)	105.4 (16.17)	27.2 (16.21)	87.2 (13.28)	9.4 (8.70)		
Median	106.0	26.0	89.0	10.0		
Min, Max	64, 130	-14, 68	66, 112	-9, 26		
Week 10						
n	32	32	18	18		
Mean (SD)	108.9 (13.41)	29.3 (13.50)	84.3 (14.60)	5.2 (10.00)		
Median	111.5	27.5	87.0	6.5		
Min, Max	81, 130	9, 54	51, 105	-20, 20		
Week 12						
n	39	39	20	20		
Mean (SD)	108.3 (12.73)	30.8 (13.28)	86.5 (10.83)	8.0 (8.82)		
Median	113.0	31.0	87.0	7.0		
Min, Max	77, 125	3, 58	54, 106	-7, 31		

Baseline is defined as the lowest Hgb value observed between and including Screening and Day 1.

Change from baseline is summarized only for patients who have data at baseline and the specified time point.

Patients were randomized to Danicopan or Placebo for 12 weeks as Treatment Period 1. At Week 12, patients randomized to Placebo were switched to Danicopan for an additional 12 weeks as Treatment Period 2 and patients randomized to Danicopan continued on Danicopan during Treatment Period 2. At the end of the Treatment Period 2 (Week 24), patients entered the Long Term Extension (LTE) Period and continue to receive Danicopan.

D->D: Danicopan at Treatment Period 1 and Danicopan at Treatment Period 2; P->D: Placebo at Treatment Period 1 and Danicopan at Treatment Period 2.

Actual values for Total group is summarized only for baseline and the time points from Long Term Extension (LTE).

Baseline is defined as the lowest Hgb value observed between and including Screening and Day 1.

Change from baseline is summarized only for patients who have data at baseline and the specified time point.

Patients were randomized to Danicopan or Placebo for 12 weeks as Treatment Period 1. At Week 12, patients randomized to Placebo were switched to Danicopan for an additional 12 weeks as Treatment Period 2 and patients randomized to Danicopan continued on Danicopan during Treatment Period 2. At the end of the Treatment Period 2 (Week 24), patients entered the Long Term Extension (LTE) Period and continue to receive Danicopan.

D->D: Danicopan at Treatment Period 1 and Danicopan at Treatment Period 2; P->D: Placebo at Treatment Period 1 and Danicopan at Treatment Period 2.

Actual values for Total group is summarized only for baseline and the time points from Long Term Extension (LTE).

Change from baseline is summarized only for patients who have data at baseline and the specified time point.

Patients were randomized to Danicopan or Placebo for 12 weeks as Treatment Period 1. At Week 12, patients randomized to Placebo were switched to Danicopan for an additional 12 weeks as Treatment Period 2 and patients randomized to Danicopan continued on Danicopan during Treatment Period 2. At the end of the Treatment Period 2 (Week 24), patients entered the Long Term Extension (LTE) Period and continue to receive Danicopan.

D->D: Danicopan at Treatment Period 1 and Danicopan at Treatment Period 2; P->D: Placebo at Treatment Period 1 and Danicopan at Treatment Period 2.

Actual values for Total group is summarized only for baseline and the time points from Long Term Extension (LTE).

Baseline is defined as the lowest Hgb value observed between and including Screening and Day 1.
Change from baseline is summarized only for patients who have data at baseline and the specified time point.
Patients were randomized to Danicopan or Placebo for 12 weeks as Treatment Period 1. At Week 12, patients randomized to Placebo were switched to Danicopan for an additional 12 weeks as Treatment Period 2 and patients randomized to Danicopan continued on Danicopan during Treatment Period 2. At the end of the Treatment Period 2 (Week 24), patients entered the Long Term Extension (LTE) Period and continue to receive Danicopan.

D->D: Danicopan at Treatment Period 1 and Danicopan at Treatment Period 2; P->D: Placebo at Treatment Period 1 and Danicopan at Treatment Period 2.

Actual values for Total group is summarized only for baseline and the time points from Long Term Extension (LTE).

Median	104.0	20.0	104.0	19.0		
Min, Max	99, 114	13, 36	93, 126	7, 50		

Baseline is defined as the lowest Hgb value observed between and including Screening and Day 1.

Change from baseline is summarized only for patients who have data at baseline and the specified time point.

Patients were randomized to Danicopan or Placebo for 12 weeks as Treatment Period 1. At Week 12, patients randomized to Placebo were switched to Danicopan for an additional 12 weeks as Treatment Period 2 and patients randomized to Danicopan continued on Danicopan during Treatment Period 2. At the end of the Treatment Period 2 (Week 24), patients entered the Long Term Extension (LTE) Period and continue to receive Danicopan.

D->D: Danicopan at Treatment Period 1 and Danicopan at Treatment Period 2; P->D: Placebo at Treatment Period 1 and Danicopan at Treatment Period 2.

Actual values for Total group is summarized only for baseline and the time points from Long Term Extension (LTE).

	95% CI for LS MEAN	(16.80, 33.71)	(-8.73, 17.88)	(5.10, 36.26)	

LS=Least squares; CI=Confidence Interval; SEM=Standard error of the mean.

Baseline is defined as the lowest Hgb value observed between and including Screening and Day 1.

The difference of LSM is calculated as the Danicopan mean minus Placebo mean.

Mixed Model for Repeated Measures (MMRM) includes the fixed, categorical effects of treatment group, study visit, and study visit by treatment group interaction as well as the continuous, fixed covariate of baseline Hgb value and the randomization stratification factor of transfusion history (> 2 or ≤ 2 transfusions within 6 months of Screening).

P-value is from difference of LSM from MMRM model. Interaction test p-value is from the same MMRM model with additional sex variable and sex by treatment interaction term.

Hgb values collected within 4 weeks after transfusion are not included in the MMRM model.

Baseline is defined as the lowest Hgb value observed between and including Screening and Day 1.

The difference of LSM is calculated as the Danicopan mean minus Placebo mean.

Mixed Model for Repeated Measures (MMRM) includes the fixed, categorical effects of treatment group, study visit, and study visit by treatment group interaction as well as the continuous, fixed covariate of baseline Hgb value and the randomization stratification factor of transfusion history (> 2 or ≤ 2 transfusions within 6 months of Screening).

P-value is from difference of LSM from MMRM model. Interaction test p-value is from the same MMRM model with additional age variable and age by treatment interaction term.

Hgb values collected within 4 weeks after transfusion are not included in the MMRM model.

Baseline is defined as the lowest Hgb value observed between and including Screening and Day 1.
The difference of LSM is calculated as the Danicopan mean minus Placebo mean.
Mixed Model for Repeated Measures (MMRM) includes the fixed, categorical effects of treatment group, study visit, and study visit by treatment group interaction as well as the continuous, fixed covariate of baseline Hgb value.
P-value is from difference of LSM from MMRM model. Interaction test p-value is from the same MMRM model with additional transfusion history variable and transfusion history by treatment interaction term.
Hgb values collected within 4 weeks after transfusion are not included in the MMRM model.

	95% CI for LS MEAN	(26.55, 36.99)	(-6.32, 11.70)	(18.68, 39.49)	
Week 8	LS Mean (SEM)	28.68 (2.788)	6.24 (4.633)	22.45 (5.403)	0.0001
	95% CI for LS MEAN	(23.06, 34.30)	(-3.09, 15.56)	(11.56, 33.33)	

LS=Least squares; CI=Confidence Interval; SEM=Standard error of the mean.

Baseline is defined as the lowest Hgb value observed between and including Screening and Day 1.

The difference of LSM is calculated as the Danicopan mean minus Placebo mean.

Mixed Model for Repeated Measures (MMRM) includes the fixed, categorical effects of treatment group, study visit, and study visit by treatment group interaction as well as the continuous, fixed covariate of baseline Hgb value and the randomization stratification factor of transfusion history (> 2 or ≤ 2 transfusions within 6 months of Screening).

P-value is from difference of LSM from MMRM model. Interaction test p-value is from the same MMRM model with additional background C5 inhibitor therapy variable and background C5 inhibitor therapy by treatment interaction term.

Hgb values collected within 4 weeks after transfusion are not included in the MMRM model.

	95% CI for LS MEAN	(16.99, 32.38)	(-9.39, 16.20)	(6.41, 36.15)	

LS=Least squares; CI=Confidence Interval; SEM=Standard error of the mean.

Baseline is defined as the lowest Hgb value observed between and including Screening and Day 1.

The difference of LSM is calculated as the Danicopan mean minus Placebo mean.

Mixed Model for Repeated Measures (MMRM) includes the fixed, categorical effects of treatment group, study visit, and study visit by treatment group interaction as well as the continuous, fixed covariate of baseline Hgb value and the randomization stratification factor of transfusion history (> 2 or ≤ 2 transfusions within 6 months of Screening).

P-value is from difference of LSM from MMRM model. Interaction test p-value is from the same MMRM model with additional race variable and race by treatment interaction term.

Hgb values collected within 4 weeks after transfusion are not included in the MMRM model.

Page 1 of 1

Table GERMANY.2.2.1.1
Proportion of Patients with Hgb Increase of ≥ 2 g/dL at Week 12 in the Absence of Transfusion
During 12-Week of Treatment Period 1
Modified Randomized Set

Variable/Statistics	Danicopan (N = 57)	Placebo (N = 26)	Treatment Difference (Danicopan-Placebo)
Patients with Hgb increase of ≥ 2 g/dL at Week 12 in the absence of transfusion			
Number of Patients (n)	31	0	
Percentage (%)	54.4	0.0	46.9
95% CI	(40.66, 67.64)	(0.00, 13.23)	(31.45, 62.36)
Stratified CMH P-value			<.0001
Odds Ratio (95% CI)			NA
Relative Risk (95% CI)			NA

CI=Confidence Interval

The criterion is defined as ≥ 2 g/dL increase in Hgb from baseline to Week 12 and remaining transfusion free during 12-Week Treatment Period 1. Patients who withdraw from the study early during the 12-Week Treatment Period 1 or have missing Hgb value at Week 12 are considered as not achieving the criterion.

Percentages are based on the total number of patients in each group.

95% CI for difference between treatment is produced using the Miettinen and Nurminen method. 95% CI for each treatment group is computed by Clopper-Pearson method. Exact unconditional approach is used for calculating the 95% CI for odds ratio and relative risk.

P-value are from Cochran-Mantel-Haenszel test controlling for stratification factors of transfusion history (> 2 or ≤ 2 transfusions within 6 months of Screening) and screening Hgb (< 8.5 g/dL or ≥ 8.5 g/dL).

Table GERMANY.2.3.5.1
Proportion of Patients with Hemoglobin Normalization at Week 12
Modified Randomized Set

Variable/Statistics	Danicopan (N = 57)	Placebo (N = 26)	Treatment Difference (Danicopan-Placebo)
Achieving Hemoglobin Normalization at Week 12			
Number of Patients (n)	15	0	
Percentage (%)	26.3	0.0	18.4
95% CI	(15.54, 39.66)	(0.00, 13.23)	(1.84, 35.02)
Stratified CMH P-value			0.0032
Odds Ratio (95% CI)			NA
Relative Risk (95% CI)			NA

Hemoglobin normalization is defined as hemoglobin value above lower limit of normal reference range.

Percentages are based on the total number of patients in each group.

95% CI for difference between treatment is produced using the Miettinen and Nurminen method. 95% CI for each treatment group is computed by Clopper-Pearson method. Exact unconditional approach is used for calculating the 95% CI for odds ratio and relative risk.

Patients with transfusions within 4 weeks prior to Week 12 are considered as not meeting hemoglobin normalization regardless of actual value observed at Week 12.

P-value are from Cochran-Mantel-Haenszel test controlling for stratification factors of transfusion history (> 2 or ≤ 2 transfusions within 6 months of Screening) and screening Hgb (< 8.5 g/dL or ≥ 8.5 g/dL).

Female (N=51)	m=34 14 (41.2) (24.6, 59.3)	m=17 0 (0.0, 19.5)	NA	NA	0.41 (0.14, 0.59)	0.0018	

CI=Confidence Interval, m = number of patients in each subgroup and treatment group, % = n/m*100 , RR = Relative Risk, OR = Odds Ratio, RD = Risk Difference.
Hemoglobin normalization is defined as hemoglobin value above lower limit of normal reference range.

Percentages are based on the total number of patients in each group.

Patients with transfusions within 4 weeks prior to Week 12 are considered as not meeting hemoglobin normalization regardless of actual value observed at Week 12.

[a] P-value is from the fisher exact test for treatment comparison. [b] P-value is from the Breslow-Day test of homogeneity of odds ratios for subgroup. The 95% CI for each treatment group is computed by Clopper-Pearson method. Exact unconditional approach is used for calculating the 95% CI for RD, RR and OR.

The subgroup with at least 10 patients in each level and at least 10 patients with response in at least one level is summarized.

Table GERMANY.2.2.2.1
Proportion of Patients Achieving Transfusion Avoidance During 12-Week of Treatment Period 1
Modified Randomized Set

Variable/Statistics	Danicopan (N = 57)	Placebo (N = 26)	Treatment Difference (Danicopan-Placebo)
Achieving pRBC/Whole Blood Transfusion Avoidance through Week 12			
Number of Patients (n)	45	8	
Percentage (%)	78.9	30.8	46.4
95% CI	(66.11, 88.62)	(14.33, 51.79)	(29.30, 63.53)
Stratified CMH P-value			<.0001
Odds Ratio (95% CI)			8.44 (2.65, 27.72)
Relative Risk (95% CI)			2.57 (1.50, 6.82)

CI=Confidence Interval; pRBC=packed red blood cells.

Transfusion Avoidance is defined as the proportion of patients who remain transfusion free and do not require a transfusion per protocol specified guidelines through Week 12.

Patients who withdraw from the study during randomized treatment period are considered as non-responders and are counted in the group requiring transfusions. Percentages are based on the total number of patients in each group.

95% CI for difference between treatment is produced using the Miettinen and Nurminen method. 95% CI for each treatment group is computed by Clopper-Pearson method. Exact unconditional approach is used for calculating the 95% CI for odds ratio and relative risk.

P-value are from Cochran-Mantel-Haenszel test controlling for stratification factors of transfusion history (> 2 or ≤ 2 transfusions within 6 months of Screening) and screening Hgb (< 8.5 g/dL or ≥ 8.5 g/dL).

≥ 65 Years (N=22)	m=16 12 (75.0) (47.6, 92.7)	m= 6 1 (16.7) (0.4, 64.1)	4.50 (1.12, 134.41)	15.00 (1.03, 766.47)	0.58 (0.07, 0.86)	0.0231	

CI=Confidence Interval, pRBC=packed red blood cells, m = number of patients in each subgroup and treatment group, % = n/m*100 , RR = Relative Risk, OR = Odds Ratio, RD = Risk Difference.

Transfusion Avoidance is defined as the proportion of patients who remain transfusion free and do not require a transfusion per protocol specified guidelines through Week 12.

Patients who withdraw from the study during randomized treatment period are considered as non-responders and are counted in the group requiring transfusions. Percentages are based on the total number of patients in each group.

[a] P-value is from the fisher exact test for treatment comparison. [b] P-value is from the Breslow-Day test of homogeneity of odds ratios for subgroup. The 95% CI for each treatment group is computed by Clopper-Pearson method. Exact unconditional approach is used for calculating the 95% CI for RD, RR and OR.

The subgroup with at least 10 patients in each level and at least 10 patients with response in at least one level is summarized.

Baseline is defined as the average of all available assessments prior to the first dose of study drug.

Change from baseline is summarized only for patients who have data at baseline and the specified time point.

Patients were randomized to Danicopan or Placebo for 12 weeks as Treatment Period 1. At Week 12, patients randomized to Placebo were switched to Danicopan for an additional 12 weeks as Treatment Period 2 and patients randomized to Danicopan continued on Danicopan during Treatment Period 2. At the end of the Treatment Period 2 (Week 24), patients entered the Long Term Extension (LTE) Period and continue to receive Danicopan.

D->D: Danicopan at Treatment Period 1 and Danicopan at Treatment Period 2; P->D: Placebo at Treatment Period 1 and Danicopan at Treatment Period 2.

LDH values in samples affected by table-top hemolysis (TTH) are not used in the analysis. Lab samples with serum potassium ≥ 6 mmol/L and LDH $\geq 2 \times$ ULN are defined as having TTH.

Actual values for Total group is summarized only for baseline and the time points from Long Term Extension (LTE).

Change from baseline is summarized only for patients who have data at baseline and the specified time point.
Patients were randomized to Danicopan or Placebo for 12 weeks as Treatment Period 1. At Week 12, patients randomized to Placebo were switched to Danicopan for an additional 12 weeks as Treatment Period 2 and patients randomized to Danicopan continued on Danicopan during Treatment Period 2. At the end of the Treatment Period 2 (Week 24), patients entered the Long Term Extension (LTE) Period and continue to receive Danicopan.
D->D: Danicopan at Treatment Period 1 and Danicopan at Treatment Period 2; P->D: Placebo at Treatment Period 1 and Danicopan at Treatment Period 2.
LDH values in samples affected by table-top hemolysis (TTH) are not used in the analysis. Lab samples with serum potassium ≥ 6 mmol/L and LDH $\geq 2 \times$ ULN are defined as having TTH.
Actual values for Total group is summarized only for baseline and the time points from Long Term Extension (LTE).

	95% CI for LS MEAN	(-56.93, -4.89)	(-33.41, 44.13)	(-82.84, 10.31)	
Week 8	LS Mean (SEM)	-16.91 (11.211)	8.83 (16.858)	-25.74 (20.175)	0.2060
	95% CI for LS MEAN	(-39.26, 5.43)	(-24.76, 42.42)	(-65.95, 14.47)	

LS=Least squares; CI=Confidence Interval; SEM=Standard error of the LS mean.

The difference of LS Means is calculated as the Danicopan mean minus Placebo mean

Baseline is defined as the average of all available assessments prior to the first dose of study drug.

Estimates are based on MMRM that includes treatment group, the observed randomization stratification factors of transfusion history (> 2 or ≤ 2 transfusions within 6 months of Screening) and screening Hgb (< 8.5 g/dL or ≥ 8.5 g/dL), baseline LDH, study visit and study visit by treatment group interaction. An Unstructured covariance structure was used.

LDH values in samples affected by table-top hemolysis (TTH) are not used in the analysis. Lab samples with serum potassium ≥ 6 mmol/L and LDH ≥ 2x ULN are defined as having TTH.

P-value are from testing treatment difference of MMRM.

Baseline is defined as the average of all available assessments prior to the first dose of study drug.
Change from baseline is summarized only for patients who have data at baseline and the specified time point.
Patients were randomized to Danicopan or Placebo for 12 weeks as Treatment Period 1. At Week 12, patients randomized to Placebo were switched to Danicopan for an additional 12 weeks as Treatment Period 2 and patients randomized to Danicopan continued on Danicopan during Treatment Period 2. At the end of the Treatment Period 2 (Week 24), patients entered the Long Term Extension (LTE) Period and continue to receive Danicopan.
D->D: Danicopan at Treatment Period 1 and Danicopan at Treatment Period 2; P->D: Placebo at Treatment Period 1 and Danicopan at Treatment Period 2.
LDH values in samples affected by table-top hemolysis (TTH) are not used in the analysis. Lab samples with serum potassium ≥ 6 mmol/L and LDH $\geq 2 \times$ ULN are defined as having TTH.
Actual values for Total group is summarized only for baseline and the time points from Long Term Extension (LTE).

Baseline is defined as the average of all available assessments prior to the first dose of study drug.
Change from baseline is summarized only for patients who have data at baseline and the specified time point.
Patients were randomized to Danicopan or Placebo for 12 weeks as Treatment Period 1. At Week 12, patients randomized to Placebo were switched to Danicopan for an additional 12 weeks as Treatment Period 2 and patients randomized to Danicopan continued on Danicopan during Treatment Period 2. At the end of the Treatment Period 2 (Week 24), patients entered the Long Term Extension (LTE) Period and continue to receive Danicopan.
D->D: Danicopan at Treatment Period 1 and Danicopan at Treatment Period 2; P->D: Placebo at Treatment Period 1 and Danicopan at Treatment Period 2.
LDH values in samples affected by table-top hemolysis (TTH) are not used in the analysis. Lab samples with serum potassium ≥ 6 mmol/L and LDH ≥ 2x ULN are defined as having TTH.
Actual values for Total group is summarized only for baseline and the time points from Long Term Extension (LTE).

Min, Max	134.0, 521.0	-198.0, 283.5	123.0, 361.0	-168.0, 11.5		

Baseline is defined as the average of all available assessments prior to the first dose of study drug.
Change from baseline is summarized only for patients who have data at baseline and the specified time point.
Patients were randomized to Danicopan or Placebo for 12 weeks as Treatment Period 1. At Week 12, patients randomized to Placebo were switched to Danicopan for an additional 12 weeks as Treatment Period 2 and patients randomized to Danicopan continued on Danicopan during Treatment Period 2. At the end of the Treatment Period 2 (Week 24), patients entered the Long Term Extension (LTE) Period and continue to receive Danicopan.
D->D: Danicopan at Treatment Period 1 and Danicopan at Treatment Period 2; P->D: Placebo at Treatment Period 1 and Danicopan at Treatment Period 2.
LDH values in samples affected by table-top hemolysis (TTH) are not used in the analysis. Lab samples with serum potassium ≥ 6 mmol/L and LDH $\geq 2 \times$ ULN are defined as having TTH.
Actual values for Total group is summarized only for baseline and the time points from Long Term Extension (LTE).

Baseline is defined as the average of all available assessments prior to the first dose of study drug.
Change from baseline is summarized only for patients who have data at baseline and the specified time point.
Patients were randomized to Danicopan or Placebo for 12 weeks as Treatment Period 1. At Week 12, patients randomized to Placebo were switched to Danicopan for an additional 12 weeks as Treatment Period 2 and patients randomized to Danicopan continued on Danicopan during Treatment Period 2. At the end of the Treatment Period 2 (Week 24), patients entered the Long Term Extension (LTE) Period and continue to receive Danicopan.
D->D: Danicopan at Treatment Period 1 and Danicopan at Treatment Period 2; P->D: Placebo at Treatment Period 1 and Danicopan at Treatment Period 2.
LDH values in samples affected by table-top hemolysis (TTH) are not used in the analysis. Lab samples with serum potassium ≥ 6 mmol/L and LDH ≥ 2x ULN are defined as having TTH.
Actual values for Total group is summarized only for baseline and the time points from Long Term Extension (LTE).

Baseline is defined as the average of all available assessments prior to the first dose of study drug.

Change from baseline is summarized only for patients who have data at baseline and the specified time point.

Patients were randomized to Danicopan or Placebo for 12 weeks as Treatment Period 1. At Week 12, patients randomized to Placebo were switched to Danicopan for an additional 12 weeks as Treatment Period 2 and patients randomized to Danicopan continued on Danicopan during Treatment Period 2. At the end of the Treatment Period 2 (Week 24), patients entered the Long Term Extension (LTE) Period and continue to receive Danicopan.

D->D: Danicopan at Treatment Period 1 and Danicopan at Treatment Period 2; P->D: Placebo at Treatment Period 1 and Danicopan at Treatment Period 2.

LDH values in samples affected by table-top hemolysis (TTH) are not used in the analysis. Lab samples with serum potassium ≥ 6 mmol/L and LDH ≥ 2x ULN are defined as having TTH.

Actual values for Total group is summarized only for baseline and the time points from Long Term Extension (LTE).

Week 8						
n	16	16	6	5		
Mean (SD)	286.94 (99.220)	1.84 (62.605)	413.33 (415.774)	3.00 (28.456)		
Median	288.00	1.75	261.00	0.50		
Min, Max	145.0, 482.0	-95.5, 123.0	204.0, 1260.0	-31.0, 42.5		
Week 10						
n	15	15	6	5		
Mean (SD)	282.73 (64.118)	4.87 (42.624)	395.50 (423.836)	-18.40 (21.864)		
Median	285.00	9.00	227.00	-17.50		
Min, Max	174.0, 399.0	-63.0, 82.5	200.0, 1260.0	-48.0, 13.5		
Week 12						
n	14	14	6	5		
Mean (SD)	280.64 (62.448)	8.07 (50.778)	398.33 (422.708)	-15.00 (19.666)		
Median	306.50	14.50	234.00	-7.50		
Min, Max	142.0, 342.0	-95.0, 99.5	188.0, 1260.0	-49.0, 1.5		

Baseline is defined as the average of all available assessments prior to the first dose of study drug.

Change from baseline is summarized only for patients who have data at baseline and the specified time point.

Patients were randomized to Danicopan or Placebo for 12 weeks as Treatment Period 1. At Week 12, patients randomized to Placebo were switched to Danicopan for an additional 12 weeks as Treatment Period 2 and patients randomized to Danicopan continued on Danicopan during Treatment Period 2. At the end of the Treatment Period 2 (Week 24), patients entered the Long Term Extension (LTE) Period and continue to receive Danicopan.

D->D: Danicopan at Treatment Period 1 and Danicopan at Treatment Period 2; P->D: Placebo at Treatment Period 1 and Danicopan at Treatment Period 2.

LDH values in samples affected by table-top hemolysis (TTH) are not used in the analysis. Lab samples with serum potassium ≥ 6 mmol/L and LDH ≥ 2x ULN are defined as having TTH.

Actual values for Total group is summarized only for baseline and the time points from Long Term Extension (LTE).

Median	276.50	0.50			276.50	0.50
Min, Max	214.0, 304.0	-51.0, 61.5			214.0, 304.0	-51.0, 61.5

Baseline is defined as the average of all available assessments prior to the first dose of study drug.
Change from baseline is summarized only for patients who have data at baseline and the specified time point.
Patients were randomized to Danicopan or Placebo for 12 weeks as Treatment Period 1. At Week 12, patients randomized to Placebo were switched to Danicopan for an additional 12 weeks as Treatment Period 2 and patients randomized to Danicopan continued on Danicopan during Treatment Period 2. At the end of the Treatment Period 2 (Week 24), patients entered the Long Term Extension (LTE) Period and continue to receive Danicopan.
D->D: Danicopan at Treatment Period 1 and Danicopan at Treatment Period 2; P->D: Placebo at Treatment Period 1 and Danicopan at Treatment Period 2.
LDH values in samples affected by table-top hemolysis (TTH) are not used in the analysis. Lab samples with serum potassium ≥ 6 mmol/L and LDH ≥ 2x ULN are defined as having TTH.
Actual values for Total group is summarized only for baseline and the time points from Long Term Extension (LTE).

Mean (SD)	248.00 (95.365)	-51.69 (119.311)	269.92 (66.759)	-5.69 (85.274)	256.64 (84.790)	-33.57 (108.166)
Median	240.00	-28.00	254.00	1.00	246.00	-15.50
Min, Max	134.0, 591.0	-467.5, 83.7	173.0, 433.0	-161.0, 127.0	134.0, 591.0	-467.5, 127.0

Baseline is defined as the average of all available assessments prior to the first dose of study drug.

Change from baseline is summarized only for patients who have data at baseline and the specified time point.

Patients were randomized to Danicopan or Placebo for 12 weeks as Treatment Period 1. At Week 12, patients randomized to Placebo were switched to Danicopan for an additional 12 weeks as Treatment Period 2 and patients randomized to Danicopan continued on Danicopan during Treatment Period 2. At the end of the Treatment Period 2 (Week 24), patients entered the Long Term Extension (LTE) Period and continue to receive Danicopan.

D->D: Danicopan at Treatment Period 1 and Danicopan at Treatment Period 2; P->D: Placebo at Treatment Period 1 and Danicopan at Treatment Period 2.

LDH values in samples affected by table-top hemolysis (TTH) are not used in the analysis. Lab samples with serum potassium ≥ 6 mmol/L and LDH ≥ 2x ULN are defined as having TTH.

Actual values for Total group is summarized only for baseline and the time points from Long Term Extension (LTE).

Baseline is defined as the average of all available assessments prior to the first dose of study drug.

Change from baseline is summarized only for patients who have data at baseline and the specified time point.

Patients were randomized to Danicopan or Placebo for 12 weeks as Treatment Period 1. At Week 12, patients randomized to Placebo were switched to Danicopan for an additional 12 weeks as Treatment Period 2 and patients randomized to Danicopan continued on Danicopan during Treatment Period 2. At the end of the Treatment Period 2 (Week 24), patients entered the Long Term Extension (LTE) Period and continue to receive Danicopan.

D->D: Danicopan at Treatment Period 1 and Danicopan at Treatment Period 2; P->D: Placebo at Treatment Period 1 and Danicopan at Treatment Period 2.

LDH values in samples affected by table-top hemolysis (TTH) are not used in the analysis. Lab samples with serum potassium ≥ 6 mmol/L and LDH ≥ 2x ULN are defined as having TTH.

Actual values for Total group is summarized only for baseline and the time points from Long Term Extension (LTE).

Baseline is defined as the average of all available assessments prior to the first dose of study drug.

Change from baseline is summarized only for patients who have data at baseline and the specified time point.

Patients were randomized to Danicopan or Placebo for 12 weeks as Treatment Period 1. At Week 12, patients randomized to Placebo were switched to Danicopan for an additional 12 weeks as Treatment Period 2 and patients randomized to Danicopan continued on Danicopan during Treatment Period 2. At the end of the Treatment Period 2 (Week 24), patients entered the Long Term Extension (LTE) Period and continue to receive Danicopan.

D->D: Danicopan at Treatment Period 1 and Danicopan at Treatment Period 2; P->D: Placebo at Treatment Period 1 and Danicopan at Treatment Period 2.

LDH values in samples affected by table-top hemolysis (TTH) are not used in the analysis. Lab samples with serum potassium ≥ 6 mmol/L and LDH ≥ 2x ULN are defined as having TTH.

Actual values for Total group is summarized only for baseline and the time points from Long Term Extension (LTE).

Mean (SD)	295.94 (140.983)	-36.46 (61.529)	241.70 (64.483)	-37.40 (63.103)		
Median	260.50	-28.17	253.00	-20.50		
Min, Max	157.0, 725.0	-228.5, 23.0	137.0, 343.0	-127.0, 71.0		

Baseline is defined as the average of all available assessments prior to the first dose of study drug.

Change from baseline is summarized only for patients who have data at baseline and the specified time point.

Patients were randomized to Danicopan or Placebo for 12 weeks as Treatment Period 1. At Week 12, patients randomized to Placebo were switched to Danicopan for an additional 12 weeks as Treatment Period 2 and patients randomized to Danicopan continued on Danicopan during Treatment Period 2. At the end of the Treatment Period 2 (Week 24), patients entered the Long Term Extension (LTE) Period and continue to receive Danicopan.

D->D: Danicopan at Treatment Period 1 and Danicopan at Treatment Period 2; P->D: Placebo at Treatment Period 1 and Danicopan at Treatment Period 2.

LDH values in samples affected by table-top hemolysis (TTH) are not used in the analysis. Lab samples with serum potassium ≥ 6 mmol/L and LDH ≥ 2x ULN are defined as having TTH.

Actual values for Total group is summarized only for baseline and the time points from Long Term Extension (LTE).

Baseline is defined as the average of all available assessments prior to the first dose of study drug.
Change from baseline is summarized only for patients who have data at baseline and the specified time point.
Patients were randomized to Danicopan or Placebo for 12 weeks as Treatment Period 1. At Week 12, patients randomized to Placebo were switched to Danicopan for an additional 12 weeks as Treatment Period 2 and patients randomized to Danicopan continued on Danicopan during Treatment Period 2. At the end of the Treatment Period 2 (Week 24), patients entered the Long Term Extension (LTE) Period and continue to receive Danicopan.
D->D: Danicopan at Treatment Period 1 and Danicopan at Treatment Period 2; P->D: Placebo at Treatment Period 1 and Danicopan at Treatment Period 2.
LDH values in samples affected by table-top hemolysis (TTH) are not used in the analysis. Lab samples with serum potassium ≥ 6 mmol/L and LDH ≥ 2x ULN are defined as having TTH.
Actual values for Total group is summarized only for baseline and the time points from Long Term Extension (LTE).

Baseline is defined as the average of all available assessments prior to the first dose of study drug.

Change from baseline is summarized only for patients who have data at baseline and the specified time point.

Patients were randomized to Danicopan or Placebo for 12 weeks as Treatment Period 1. At Week 12, patients randomized to Placebo were switched to Danicopan for an additional 12 weeks as Treatment Period 2 and patients randomized to Danicopan continued on Danicopan during Treatment Period 2. At the end of the Treatment Period 2 (Week 24), patients entered the Long Term Extension (LTE) Period and continue to receive Danicopan.

D->D: Danicopan at Treatment Period 1 and Danicopan at Treatment Period 2; P->D: Placebo at Treatment Period 1 and Danicopan at Treatment Period 2.

LDH values in samples affected by table-top hemolysis (TTH) are not used in the analysis. Lab samples with serum potassium ≥ 6 mmol/L and LDH ≥ 2x ULN are defined as having TTH.

Actual values for Total group is summarized only for baseline and the time points from Long Term Extension (LTE).

D->D: Danicopan at Treatment Period 1 and Danicopan at Treatment Period 2; P->D: Placebo at Treatment Period 1 and Danicopan at Treatment Period 2.

LDH values in samples affected by table-top hemolysis (TTH) are not used in the analysis. Lab samples with serum potassium ≥ 6 mmol/L and LDH ≥ 2x ULN are defined as having TTH.

Actual values for Total group is summarized only for baseline and the time points from Long Term Extension (LTE).

Baseline is defined as the average of all available assessments prior to the first dose of study drug.

Change from baseline is summarized only for patients who have data at baseline and the specified time point.

Patients were randomized to Danicopan or Placebo for 12 weeks as Treatment Period 1. At Week 12, patients randomized to Placebo were switched to Danicopan for an additional 12 weeks as Treatment Period 2 and patients randomized to Danicopan continued on Danicopan during Treatment Period 2. At the end of the Treatment Period 2 (Week 24), patients entered the Long Term Extension (LTE) Period and continue to receive Danicopan.

D->D: Danicopan at Treatment Period 1 and Danicopan at Treatment Period 2; P->D: Placebo at Treatment Period 1 and Danicopan at Treatment Period 2.

LDH values in samples affected by table-top hemolysis (TTH) are not used in the analysis. Lab samples with serum potassium ≥ 6 mmol/L and LDH ≥ 2x ULN are defined as having TTH.

Actual values for Total group is summarized only for baseline and the time points from Long Term Extension (LTE).

Min, Max	173.0, 341.0	-208.0, 114.0	193.0, 433.0	-101.0, 143.5	173.0, 433.0	-208.0, 143.5

Baseline is defined as the average of all available assessments prior to the first dose of study drug.

Change from baseline is summarized only for patients who have data at baseline and the specified time point.

Patients were randomized to Danicopan or Placebo for 12 weeks as Treatment Period 1. At Week 12, patients randomized to Placebo were switched to Danicopan for an additional 12 weeks as Treatment Period 2 and patients randomized to Danicopan continued on Danicopan during Treatment Period 2. At the end of the Treatment Period 2 (Week 24), patients entered the Long Term Extension (LTE) Period and continue to receive Danicopan.

D->D: Danicopan at Treatment Period 1 and Danicopan at Treatment Period 2; P->D: Placebo at Treatment Period 1 and Danicopan at Treatment Period 2.

LDH values in samples affected by table-top hemolysis (TTH) are not used in the analysis. Lab samples with serum potassium ≥ 6 mmol/L and LDH ≥ 2x ULN are defined as having TTH.

Actual values for Total group is summarized only for baseline and the time points from Long Term Extension (LTE).

Week 6						
n	20	19	11	11		
Mean (SD)	280.15 (149.140)	-14.12 (51.893)	321.64 (184.677)	39.50 (200.666)		
Median	254.50	-25.50	264.00	11.00		
Min, Max	124.0, 794.0	-116.5, 78.0	167.0, 843.0	-167.0, 603.0		

Baseline is defined as the average of all available assessments prior to the first dose of study drug.

Change from baseline is summarized only for patients who have data at baseline and the specified time point.

Patients were randomized to Danicopan or Placebo for 12 weeks as Treatment Period 1. At Week 12, patients randomized to Placebo were switched to Danicopan for an additional 12 weeks as Treatment Period 2 and patients randomized to Danicopan continued on Danicopan during Treatment Period 2. At the end of the Treatment Period 2 (Week 24), patients entered the Long Term Extension (LTE) Period and continue to receive Danicopan.

D->D: Danicopan at Treatment Period 1 and Danicopan at Treatment Period 2; P->D: Placebo at Treatment Period 1 and Danicopan at Treatment Period 2.

LDH values in samples affected by table-top hemolysis (TTH) are not used in the analysis. Lab samples with serum potassium ≥ 6 mmol/L and LDH ≥ 2x ULN are defined as having TTH.

Actual values for Total group is summarized only for baseline and the time points from Long Term Extension (LTE).

Baseline is defined as the average of all available assessments prior to the first dose of study drug.

Change from baseline is summarized only for patients who have data at baseline and the specified time point.

Patients were randomized to Danicopan or Placebo for 12 weeks as Treatment Period 1. At Week 12, patients randomized to Placebo were switched to Danicopan for an additional 12 weeks as Treatment Period 2 and patients randomized to Danicopan continued on Danicopan during Treatment Period 2. At the end of the Treatment Period 2 (Week 24), patients entered the Long Term Extension (LTE) Period and continue to receive Danicopan.

D->D: Danicopan at Treatment Period 1 and Danicopan at Treatment Period 2; P->D: Placebo at Treatment Period 1 and Danicopan at Treatment Period 2.

LDH values in samples affected by table-top hemolysis (TTH) are not used in the analysis. Lab samples with serum potassium ≥ 6 mmol/L and LDH $\geq 2x$ ULN are defined as having TTH.

Actual values for Total group is summarized only for baseline and the time points from Long Term Extension (LTE).

Min, Max	171.0, 725.0	-243.5, 235.5	137.0, 348.0	-127.0, 84.5		

Baseline is defined as the average of all available assessments prior to the first dose of study drug.

Change from baseline is summarized only for patients who have data at baseline and the specified time point.

Patients were randomized to Danicopan or Placebo for 12 weeks as Treatment Period 1. At Week 12, patients randomized to Placebo were switched to Danicopan for an additional 12 weeks as Treatment Period 2 and patients randomized to Danicopan continued on Danicopan during Treatment Period 2. At the end of the Treatment Period 2 (Week 24), patients entered the Long Term Extension (LTE) Period and continue to receive Danicopan.

D->D: Danicopan at Treatment Period 1 and Danicopan at Treatment Period 2; P->D: Placebo at Treatment Period 1 and Danicopan at Treatment Period 2.

LDH values in samples affected by table-top hemolysis (TTH) are not used in the analysis. Lab samples with serum potassium ≥ 6 mmol/L and LDH ≥ 2x ULN are defined as having TTH.

Actual values for Total group is summarized only for baseline and the time points from Long Term Extension (LTE).

Min, Max	193.0, 193.0	-44.5, -44.5	221.0, 221.0	34.0, 34.0	193.0, 221.0	-44.5, 34.0

Baseline is defined as the average of all available assessments prior to the first dose of study drug.

Change from baseline is summarized only for patients who have data at baseline and the specified time point.

Patients were randomized to Danicopan or Placebo for 12 weeks as Treatment Period 1. At Week 12, patients randomized to Placebo were switched to Danicopan for an additional 12 weeks as Treatment Period 2 and patients randomized to Danicopan continued on Danicopan during Treatment Period 2. At the end of the Treatment Period 2 (Week 24), patients entered the Long Term Extension (LTE) Period and continue to receive Danicopan.

D->D: Danicopan at Treatment Period 1 and Danicopan at Treatment Period 2; P->D: Placebo at Treatment Period 1 and Danicopan at Treatment Period 2.

LDH values in samples affected by table-top hemolysis (TTH) are not used in the analysis. Lab samples with serum potassium ≥ 6 mmol/L and LDH ≥ 2x ULN are defined as having TTH.

Actual values for Total group is summarized only for baseline and the time points from Long Term Extension (LTE).

Week 20						
n	41	40	20	20		
Mean (SD)	282.98 (116.046)	-24.35 (87.478)	260.85 (82.433)	-11.18 (74.863)		
Median	257.00	-12.25	248.50	-5.50		
Min, Max	157.0, 725.0	-243.5, 235.5	137.0, 535.0	-127.0, 229.0		

Baseline is defined as the average of all available assessments prior to the first dose of study drug.

Change from baseline is summarized only for patients who have data at baseline and the specified time point.

Patients were randomized to Danicopan or Placebo for 12 weeks as Treatment Period 1. At Week 12, patients randomized to Placebo were switched to Danicopan for an additional 12 weeks as Treatment Period 2 and patients randomized to Danicopan continued on Danicopan during Treatment Period 2. At the end of the Treatment Period 2 (Week 24), patients entered the Long Term Extension (LTE) Period and continue to receive Danicopan.

D->D: Danicopan at Treatment Period 1 and Danicopan at Treatment Period 2; P->D: Placebo at Treatment Period 1 and Danicopan at Treatment Period 2.

LDH values in samples affected by table-top hemolysis (TTH) are not used in the analysis. Lab samples with serum potassium ≥ 6 mmol/L and LDH $\geq 2 \times$ ULN are defined as having TTH.

Actual values for Total group is summarized only for baseline and the time points from Long Term Extension (LTE).

Baseline is defined as the average of all available assessments prior to the first dose of study drug.

Change from baseline is summarized only for patients who have data at baseline and the specified time point.

Patients were randomized to Danicopan or Placebo for 12 weeks as Treatment Period 1. At Week 12, patients randomized to Placebo were switched to Danicopan for an additional 12 weeks as Treatment Period 2 and patients randomized to Danicopan continued on Danicopan during Treatment Period 2. At the end of the Treatment Period 2 (Week 24), patients entered the Long Term Extension (LTE) Period and continue to receive Danicopan.

D->D: Danicopan at Treatment Period 1 and Danicopan at Treatment Period 2; P->D: Placebo at Treatment Period 1 and Danicopan at Treatment Period 2.

LDH values in samples affected by table-top hemolysis (TTH) are not used in the analysis. Lab samples with serum potassium ≥ 6 mmol/L and LDH ≥ 2x ULN are defined as having TTH.

Actual values for Total group is summarized only for baseline and the time points from Long Term Extension (LTE).

Min, Max	134.0, 627.0	-486.5, 283.5	166.0, 279.0	-168.0, 29.0		

Baseline is defined as the average of all available assessments prior to the first dose of study drug.

Change from baseline is summarized only for patients who have data at baseline and the specified time point.

Patients were randomized to Danicopan or Placebo for 12 weeks as Treatment Period 1. At Week 12, patients randomized to Placebo were switched to Danicopan for an additional 12 weeks as Treatment Period 2 and patients randomized to Danicopan continued on Danicopan during Treatment Period 2. At the end of the Treatment Period 2 (Week 24), patients entered the Long Term Extension (LTE) Period and continue to receive Danicopan.

D->D: Danicopan at Treatment Period 1 and Danicopan at Treatment Period 2; P->D: Placebo at Treatment Period 1 and Danicopan at Treatment Period 2.

LDH values in samples affected by table-top hemolysis (TTH) are not used in the analysis. Lab samples with serum potassium ≥ 6 mmol/L and LDH $\geq 2 \times$ ULN are defined as having TTH.

Actual values for Total group is summarized only for baseline and the time points from Long Term Extension (LTE).

Baseline is defined as the average of all available assessments prior to the first dose of study drug.

Change from baseline is summarized only for patients who have data at baseline and the specified time point.

Patients were randomized to Danicopan or Placebo for 12 weeks as Treatment Period 1. At Week 12, patients randomized to Placebo were switched to Danicopan for an additional 12 weeks as Treatment Period 2 and patients randomized to Danicopan continued on Danicopan during Treatment Period 2. At the end of the Treatment Period 2 (Week 24), patients entered the Long Term Extension (LTE) Period and continue to receive Danicopan.

D->D: Danicopan at Treatment Period 1 and Danicopan at Treatment Period 2; P->D: Placebo at Treatment Period 1 and Danicopan at Treatment Period 2.

LDH values in samples affected by table-top hemolysis (TTH) are not used in the analysis. Lab samples with serum potassium ≥ 6 mmol/L and LDH $\geq 2x$ ULN are defined as having TTH.

Actual values for Total group is summarized only for baseline and the time points from Long Term Extension (LTE).

Min, Max	239.0, 347.0	-230.5, 153.0	222.0, 394.0	-120.0, 94.5	222.0, 394.0	-230.5, 153.0

Baseline is defined as the average of all available assessments prior to the first dose of study drug.

Change from baseline is summarized only for patients who have data at baseline and the specified time point.

Patients were randomized to Danicopan or Placebo for 12 weeks as Treatment Period 1. At Week 12, patients randomized to Placebo were switched to Danicopan for an additional 12 weeks as Treatment Period 2 and patients randomized to Danicopan continued on Danicopan during Treatment Period 2. At the end of the Treatment Period 2 (Week 24), patients entered the Long Term Extension (LTE) Period and continue to receive Danicopan.

D->D: Danicopan at Treatment Period 1 and Danicopan at Treatment Period 2; P->D: Placebo at Treatment Period 1 and Danicopan at Treatment Period 2.

LDH values in samples affected by table-top hemolysis (TTH) are not used in the analysis. Lab samples with serum potassium ≥ 6 mmol/L and LDH ≥ 2x ULN are defined as having TTH.

Actual values for Total group is summarized only for baseline and the time points from Long Term Extension (LTE).

	95% CI for LS MEAN	(-78.01, 5.52)	(-56.39, 71.30)	(-120.05, 32.65)	

LS=Least squares; CI=Confidence Interval; SEM=Standard error of the LS mean.

The difference of LS Means is calculated as the Danicopan mean minus Placebo mean

Baseline is defined as the average of all available assessments prior to the first dose of study drug.

Estimates are based on MMRM that includes treatment group, the observed randomization stratification factors of transfusion history (> 2 or ≤ 2 transfusions within 6 months of Screening) and screening Hgb (< 8.5 g/dL or ≥ 8.5 g/dL), baseline LDH, study visit and study visit by treatment group interaction. LDH values in samples affected by table-top hemolysis (TTH) are not used in the analysis. Lab samples with serum potassium ≥ 6 mmol/L and LDH ≥ 2x ULN are defined as having TTH.

P-value are from testing treatment difference of MMRM. Interaction test p-value is from the same MMRM model with additional sex variable and sex by treatment interaction term.

The difference of LS Means is calculated as the Danicopan mean minus Placebo mean

Baseline is defined as the average of all available assessments prior to the first dose of study drug.

Estimates are based on MMRM that includes treatment group, the observed randomization stratification factors of transfusion history (> 2 or ≤ 2 transfusions within 6 months of Screening) and screening Hgb (< 8.5 g/dL or ≥ 8.5 g/dL), baseline LDH, study visit and study visit by treatment group interaction. LDH values in samples affected by table-top hemolysis (TTH) are not used in the analysis. Lab samples with serum potassium ≥ 6 mmol/L and LDH $\geq 2x$ ULN are defined as having TTH.

P-value are from testing treatment difference of MMRM. Interaction test p-value is from the same MMRM model with additional age variable and age by treatment interaction term.

	95% CI for LS MEAN	(-48.69, -9.52)	(-40.72, 17.14)	(-52.31, 17.68)	

LS=Least squares; CI=Confidence Interval; SEM=Standard error of the LS mean.

The difference of LS Means is calculated as the Danicopan mean minus Placebo mean

Baseline is defined as the average of all available assessments prior to the first dose of study drug.

Estimates are based on MMRM that includes treatment group, the observed randomization stratification factors of screening Hgb (< 8.5 g/dL or ≥ 8.5 g/dL), baseline LDH, study visit and study visit by treatment group interaction.

LDH values in samples affected by table-top hemolysis (TTH) are not used in the analysis. Lab samples with serum potassium ≥ 6 mmol/L and LDH ≥ 2x ULN are defined as having TTH.

P-value are from testing treatment difference of MMRM. Interaction test p-value is from the same MMRM model with additional transfusion history variable and transfusion history by treatment interaction term.

	95% CI for LS MEAN	(-45.54, -8.06)	(-43.71, 17.13)	(-49.09, 22.07)	

LS=Least squares; CI=Confidence Interval; SEM=Standard error of the LS mean.

The difference of LS Means is calculated as the Danicopan mean minus Placebo mean

Baseline is defined as the average of all available assessments prior to the first dose of study drug.

Estimates are based on MMRM that includes treatment group, the observed randomization stratification factors of transfusion history (> 2 or ≤ 2 transfusions within 6 months of Screening) and screening Hgb (< 8.5 g/dL or ≥ 8.5 g/dL), baseline LDH, study visit and study visit by treatment group interaction. LDH values in samples affected by table-top hemolysis (TTH) are not used in the analysis. Lab samples with serum potassium ≥ 6 mmol/L and LDH ≥ 2x ULN are defined as having TTH.

P-value are from testing treatment difference of MMRM. Interaction test p-value is from the same MMRM model with additional background C5 inhibitor therapy variable and background C5 inhibitor therapy by treatment interaction term.

White

Visit	Statistics	Danicopan (N = 28)	Placebo (N = 11)	Difference (Danicopan-Placebo)	P-value
Week 1	LS Mean (SEM)	-52.27 (13.420)	-14.33 (20.494)	-37.94 (24.410)	0.1312
	95% CI for LS MEAN	(-79.69, -24.85)	(-56.30, 27.64)	(-87.91, 12.03)	
Week 2	LS Mean (SEM)	-64.61 (32.015)	48.40 (51.075)	-113.01 (60.258)	0.0688
	95% CI for LS MEAN	(-129.52, 0.30)	(-55.15, 151.95)	(-235.19, 9.16)	
Week 3	LS Mean (SEM)	-73.68 (12.312)	-17.38 (19.665)	-56.30 (23.152)	0.0212
	95% CI for LS MEAN	(-98.83, -48.52)	(-57.54, 22.79)	(-103.59, -9.01)	
Week 4	LS Mean (SEM)	-41.08 (12.891)	-11.49 (24.819)	-29.59 (27.955)	0.3247
	95% CI for LS MEAN	(-72.75, -9.40)	(-69.32, 46.34)	(-95.56, 36.39)	
Week 6	LS Mean (SEM)	-11.72 (24.950)	25.82 (39.505)	-37.54 (46.702)	0.4269
	95% CI for LS MEAN	(-62.36, 38.92)	(-54.36, 106.00)	(-132.33, 57.25)	
Week 8	LS Mean (SEM)	-8.92 (23.120)	5.51 (37.284)	-14.43 (43.849)	0.7442
	95% CI for LS MEAN	(-56.05, 38.22)	(-70.42, 81.44)	(-103.76, 74.90)	

LS=Least squares; CI=Confidence Interval; SEM=Standard error of the LS mean.

The difference of LS Means is calculated as the Danicopan mean minus Placebo mean

Baseline is defined as the average of all available assessments prior to the first dose of study drug.

Estimates are based on MMRM that includes treatment group, the observed randomization stratification factors of transfusion history (> 2 or ≤ 2 transfusions within 6 months of Screening) and screening Hgb (< 8.5 g/dL or ≥ 8.5 g/dL), baseline LDH, study visit and study visit by treatment group interaction. LDH values in samples affected by table-top hemolysis (TTH) are not used in the analysis. Lab samples with serum potassium ≥ 6 mmol/L and LDH ≥ 2x ULN are defined as having TTH.

P-value are from testing treatment difference of MMRM. Interaction test p-value is from the same MMRM model with additional race variable and race by treatment interaction term.

Baseline is defined as the last non-missing value prior to the first dose of study drug.

Change from baseline is summarized only for patients who have data at baseline and the specified time point.

Patients were randomized to Danicopan or Placebo for 12 weeks as Treatment Period 1. At Week 12, patients randomized to Placebo were switched to Danicopan for an additional 12 weeks as Treatment Period 2 and patients randomized to Danicopan continued on Danicopan during Treatment Period 2. At the end of the Treatment Period 2 (Week 24), patients entered the Long Term Extension (LTE) Period and continue to receive Danicopan.

D->D: Danicopan at Treatment Period 1 and Danicopan at Treatment Period 2; P->D: Placebo at Treatment Period 1 and Danicopan at Treatment Period 2.

Actual values for Total group is summarized only for baseline and the time points from Long Term Extension (LTE).

Baseline is defined as the last non-missing value prior to the first dose of study drug.
Change from baseline is summarized only for patients who have data at baseline and the specified time point.
Patients were randomized to Danicopan or Placebo for 12 weeks as Treatment Period 1. At Week 12, patients randomized to Placebo were switched to Danicopan for an additional 12 weeks as Treatment Period 2 and patients randomized to Danicopan continued on Danicopan during Treatment Period 2. At the end of the Treatment Period 2 (Week 24), patients entered the Long Term Extension (LTE) Period and continue to receive Danicopan.

D->D: Danicopan at Treatment Period 1 and Danicopan at Treatment Period 2; P->D: Placebo at Treatment Period 1 and Danicopan at Treatment Period 2.

Actual values for Total group is summarized only for baseline and the time points from Long Term Extension (LTE).

Week 4	LS Mean (SEM)	-0.1215 (0.00949)	-0.0119 (0.01466)	-0.1096 (0.01734)	<0.0001
	95% CI for LS MEAN	(-0.1404, -0.1026)	(-0.0412, 0.0174)	(-0.1442, -0.0750)	
Week 6	LS Mean (SEM)	-0.1128 (0.00738)	-0.0042 (0.01116)	-0.1086 (0.01322)	<0.0001
	95% CI for LS MEAN	(-0.1276, -0.0981)	(-0.0266, 0.0181)	(-0.1350, -0.0822)	
Week 8	LS Mean (SEM)	-0.1028 (0.00693)	-0.0094 (0.01016)	-0.0934 (0.01211)	<0.0001
	95% CI for LS MEAN	(-0.1166, -0.0890)	(-0.0297, 0.0109)	(-0.1176, -0.0692)	

LS=Least squares; CI=Confidence Interval; SEM=Standard error of the LS mean.

The difference of LS Means is calculated as the Danicopan mean minus Placebo mean.

Estimates are based on a MMRM model which includes categorical variables for treatment, study visit, and study visit by treatment group interaction as well as continuous covariates baseline absolute reticulocyte count, and the randomization stratification factors of transfusion history (> 2 or ≤ 2 transfusions within 6 months of Screening) and screening Hgb (< 8.5 g/dL or ≥ 8.5 g/dL). An Unstructured covariance structure was used.

P-value is from difference of LSM from MMRM model.

Baseline is defined as the last non-missing value prior to the first dose of study drug.

Baseline is defined as the last non-missing value prior to the first dose of study drug.
Change from baseline is summarized only for patients who have data at baseline and the specified time point.
Patients were randomized to Danicopan or Placebo for 12 weeks as Treatment Period 1. At Week 12, patients randomized to Placebo were switched to Danicopan for an additional 12 weeks as Treatment Period 2 and patients randomized to Danicopan continued on Danicopan during Treatment Period 2. At the end of the Treatment Period 2 (Week 24), patients entered the Long Term Extension (LTE) Period and continue to receive Danicopan.

D->D: Danicopan at Treatment Period 1 and Danicopan at Treatment Period 2; P->D: Placebo at Treatment Period 1 and Danicopan at Treatment Period 2.

Actual values for Total group is summarized only for baseline and the time points from Long Term Extension (LTE).

Baseline is defined as the last non-missing value prior to the first dose of study drug.

Change from baseline is summarized only for patients who have data at baseline and the specified time point.

Patients were randomized to Danicopan or Placebo for 12 weeks as Treatment Period 1. At Week 12, patients randomized to Placebo were switched to Danicopan for an additional 12 weeks as Treatment Period 2 and patients randomized to Danicopan continued on Danicopan during Treatment Period 2. At the end of the Treatment Period 2 (Week 24), patients entered the Long Term Extension (LTE) Period and continue to receive Danicopan.

D->D: Danicopan at Treatment Period 1 and Danicopan at Treatment Period 2; P->D: Placebo at Treatment Period 1 and Danicopan at Treatment Period 2.

Actual values for Total group is summarized only for baseline and the time points from Long Term Extension (LTE).

Patients were randomized to Danicopan or Placebo for 12 weeks as Treatment Period 1. At Week 12, patients randomized to Placebo were switched to Danicopan for an additional 12 weeks as Treatment Period 2 and patients randomized to Danicopan continued on Danicopan during Treatment Period 2. At the end of the Treatment Period 2 (Week 24), patients entered the Long Term Extension (LTE) Period and continue to receive Danicopan.

D->D: Danicopan at Treatment Period 1 and Danicopan at Treatment Period 2; P->D: Placebo at Treatment Period 1 and Danicopan at Treatment Period 2.

Actual values for Total group is summarized only for baseline and the time points from Long Term Extension (LTE).

Baseline is defined as the last non-missing value prior to the first dose of study drug.
Change from baseline is summarized only for patients who have data at baseline and the specified time point.
Patients were randomized to Danicopan or Placebo for 12 weeks as Treatment Period 1. At Week 12, patients randomized to Placebo were switched to Danicopan for an additional 12 weeks as Treatment Period 2 and patients randomized to Danicopan continued on Danicopan during Treatment Period 2. At the end of the Treatment Period 2 (Week 24), patients entered the Long Term Extension (LTE) Period and continue to receive Danicopan.
D->D: Danicopan at Treatment Period 1 and Danicopan at Treatment Period 2; P->D: Placebo at Treatment Period 1 and Danicopan at Treatment Period 2.
Actual values for Total group is summarized only for baseline and the time points from Long Term Extension (LTE).

Baseline is defined as the last non-missing value prior to the first dose of study drug.

Change from baseline is summarized only for patients who have data at baseline and the specified time point.

Patients were randomized to Danicopan or Placebo for 12 weeks as Treatment Period 1. At Week 12, patients randomized to Placebo were switched to Danicopan for an additional 12 weeks as Treatment Period 2 and patients randomized to Danicopan continued on Danicopan during Treatment Period 2. At the end of the Treatment Period 2 (Week 24), patients entered the Long Term Extension (LTE) Period and continue to receive Danicopan.

D->D: Danicopan at Treatment Period 1 and Danicopan at Treatment Period 2; P->D: Placebo at Treatment Period 1 and Danicopan at Treatment Period 2.

Actual values for Total group is summarized only for baseline and the time points from Long Term Extension (LTE).

Baseline is defined as the last non-missing value prior to the first dose of study drug.

Change from baseline is summarized only for patients who have data at baseline and the specified time point.

Patients were randomized to Danicopan or Placebo for 12 weeks as Treatment Period 1. At Week 12, patients randomized to Placebo were switched to Danicopan for an additional 12 weeks as Treatment Period 2 and patients randomized to Danicopan continued on Danicopan during Treatment Period 2. At the end of the Treatment Period 2 (Week 24), patients entered the Long Term Extension (LTE) Period and continue to receive Danicopan.

D->D: Danicopan at Treatment Period 1 and Danicopan at Treatment Period 2; P->D: Placebo at Treatment Period 1 and Danicopan at Treatment Period 2.

Actual values for Total group is summarized only for baseline and the time points from Long Term Extension (LTE).

Baseline is defined as the last non-missing value prior to the first dose of study drug.

Change from baseline is summarized only for patients who have data at baseline and the specified time point.

Patients were randomized to Danicopan or Placebo for 12 weeks as Treatment Period 1. At Week 12, patients randomized to Placebo were switched to Danicopan for an additional 12 weeks as Treatment Period 2 and patients randomized to Danicopan continued on Danicopan during Treatment Period 2. At the end of the Treatment Period 2 (Week 24), patients entered the Long Term Extension (LTE) Period and continue to receive Danicopan.

D->D: Danicopan at Treatment Period 1 and Danicopan at Treatment Period 2; P->D: Placebo at Treatment Period 1 and Danicopan at Treatment Period 2.

Actual values for Total group is summarized only for baseline and the time points from Long Term Extension (LTE).

Baseline is defined as the last non-missing value prior to the first dose of study drug.

Change from baseline is summarized only for patients who have data at baseline and the specified time point.

Patients were randomized to Danicopan or Placebo for 12 weeks as Treatment Period 1. At Week 12, patients randomized to Placebo were switched to Danicopan for an additional 12 weeks as Treatment Period 2 and patients randomized to Danicopan continued on Danicopan during Treatment Period 2. At the end of the Treatment Period 2 (Week 24), patients entered the Long Term Extension (LTE) Period and continue to receive Danicopan.

D->D: Danicopan at Treatment Period 1 and Danicopan at Treatment Period 2; P->D: Placebo at Treatment Period 1 and Danicopan at Treatment Period 2.

Actual values for Total group is summarized only for baseline and the time points from Long Term Extension (LTE).

Change from baseline is summarized only for patients who have data at baseline and the specified time point.
Patients were randomized to Danicopan or Placebo for 12 weeks as Treatment Period 1. At Week 12, patients randomized to Placebo were switched to Danicopan for an additional 12 weeks as Treatment Period 2 and patients randomized to Danicopan continued on Danicopan during Treatment Period 2. At the end of the Treatment Period 2 (Week 24), patients entered the Long Term Extension (LTE) Period and continue to receive Danicopan.
D->D: Danicopan at Treatment Period 1 and Danicopan at Treatment Period 2; P->D: Placebo at Treatment Period 1 and Danicopan at Treatment Period 2.
Actual values for Total group is summarized only for baseline and the time points from Long Term Extension (LTE).

Baseline is defined as the last non-missing value prior to the first dose of study drug.
Change from baseline is summarized only for patients who have data at baseline and the specified time point.
Patients were randomized to Danicopan or Placebo for 12 weeks as Treatment Period 1. At Week 12, patients randomized to Placebo were switched to Danicopan for an additional 12 weeks as Treatment Period 2 and patients randomized to Danicopan continued on Danicopan during Treatment Period 2. At the end of the Treatment Period 2 (Week 24), patients entered the Long Term Extension (LTE) Period and continue to receive Danicopan.
D->D: Danicopan at Treatment Period 1 and Danicopan at Treatment Period 2; P->D: Placebo at Treatment Period 1 and Danicopan at Treatment Period 2.
Actual values for Total group is summarized only for baseline and the time points from Long Term Extension (LTE).

Baseline is defined as the last non-missing value prior to the first dose of study drug.

Change from baseline is summarized only for patients who have data at baseline and the specified time point.

Patients were randomized to Danicopan or Placebo for 12 weeks as Treatment Period 1. At Week 12, patients randomized to Placebo were switched to Danicopan for an additional 12 weeks as Treatment Period 2 and patients randomized to Danicopan continued on Danicopan during Treatment Period 2. At the end of the Treatment Period 2 (Week 24), patients entered the Long Term Extension (LTE) Period and continue to receive Danicopan.

D->D: Danicopan at Treatment Period 1 and Danicopan at Treatment Period 2; P->D: Placebo at Treatment Period 1 and Danicopan at Treatment Period 2.

Actual values for Total group is summarized only for baseline and the time points from Long Term Extension (LTE).

Baseline is defined as the last non-missing value prior to the first dose of study drug.

Change from baseline is summarized only for patients who have data at baseline and the specified time point.

Patients were randomized to Danicopan or Placebo for 12 weeks as Treatment Period 1. At Week 12, patients randomized to Placebo were switched to Danicopan for an additional 12 weeks as Treatment Period 2 and patients randomized to Danicopan continued on Danicopan during Treatment Period 2. At the end of the Treatment Period 2 (Week 24), patients entered the Long Term Extension (LTE) Period and continue to receive Danicopan.

D->D: Danicopan at Treatment Period 1 and Danicopan at Treatment Period 2; P->D: Placebo at Treatment Period 1 and Danicopan at Treatment Period 2.

Actual values for Total group is summarized only for baseline and the time points from Long Term Extension (LTE).

Baseline is defined as the last non-missing value prior to the first dose of study drug.

Change from baseline is summarized only for patients who have data at baseline and the specified time point.

Patients were randomized to Danicopan or Placebo for 12 weeks as Treatment Period 1. At Week 12, patients randomized to Placebo were switched to Danicopan for an additional 12 weeks as Treatment Period 2 and patients randomized to Danicopan continued on Danicopan during Treatment Period 2. At the end of the Treatment Period 2 (Week 24), patients entered the Long Term Extension (LTE) Period and continue to receive Danicopan.

D->D: Danicopan at Treatment Period 1 and Danicopan at Treatment Period 2; P->D: Placebo at Treatment Period 1 and Danicopan at Treatment Period 2.

Actual values for Total group is summarized only for baseline and the time points from Long Term Extension (LTE).

Baseline is defined as the last non-missing value prior to the first dose of study drug.

Change from baseline is summarized only for patients who have data at baseline and the specified time point.

Patients were randomized to Danicopan or Placebo for 12 weeks as Treatment Period 1. At Week 12, patients randomized to Placebo were switched to Danicopan for an additional 12 weeks as Treatment Period 2 and patients randomized to Danicopan continued on Danicopan during Treatment Period 2. At the end of the Treatment Period 2 (Week 24), patients entered the Long Term Extension (LTE) Period and continue to receive Danicopan.

D->D: Danicopan at Treatment Period 1 and Danicopan at Treatment Period 2; P->D: Placebo at Treatment Period 1 and Danicopan at Treatment Period 2.

Actual values for Total group is summarized only for baseline and the time points from Long Term Extension (LTE).

Baseline is defined as the last non-missing value prior to the first dose of study drug.

Change from baseline is summarized only for patients who have data at baseline and the specified time point.

Patients were randomized to Danicopan or Placebo for 12 weeks as Treatment Period 1. At Week 12, patients randomized to Placebo were switched to Danicopan for an additional 12 weeks as Treatment Period 2 and patients randomized to Danicopan continued on Danicopan during Treatment Period 2. At the end of the Treatment Period 2 (Week 24), patients entered the Long Term Extension (LTE) Period and continue to receive Danicopan.

D->D: Danicopan at Treatment Period 1 and Danicopan at Treatment Period 2; P->D: Placebo at Treatment Period 1 and Danicopan at Treatment Period 2.

Actual values for Total group is summarized only for baseline and the time points from Long Term Extension (LTE).

At the end of the Treatment Period 2 (Week 24), patients entered the Long Term Extension (LTE) Period and continue to receive Danicopan.

D->D: Danicopan at Treatment Period 1 and Danicopan at Treatment Period 2; P->D: Placebo at Treatment Period 1 and Danicopan at Treatment Period 2.

Actual values for Total group is summarized only for baseline and the time points from Long Term Extension (LTE).

Baseline is defined as the last non-missing value prior to the first dose of study drug.

Change from baseline is summarized only for patients who have data at baseline and the specified time point.

Patients were randomized to Danicopan or Placebo for 12 weeks as Treatment Period 1. At Week 12, patients randomized to Placebo were switched to Danicopan for an additional 12 weeks as Treatment Period 2 and patients randomized to Danicopan continued on Danicopan during Treatment Period 2. At the end of the Treatment Period 2 (Week 24), patients entered the Long Term Extension (LTE) Period and continue to receive Danicopan.

D->D: Danicopan at Treatment Period 1 and Danicopan at Treatment Period 2; P->D: Placebo at Treatment Period 1 and Danicopan at Treatment Period 2.

Actual values for Total group is summarized only for baseline and the time points from Long Term Extension (LTE).

Baseline is defined as the last non-missing value prior to the first dose of study drug.

Change from baseline is summarized only for patients who have data at baseline and the specified time point.

Patients were randomized to Danicopan or Placebo for 12 weeks as Treatment Period 1. At Week 12, patients randomized to Placebo were switched to Danicopan for an additional 12 weeks as Treatment Period 2 and patients randomized to Danicopan continued on Danicopan during Treatment Period 2. At the end of the Treatment Period 2 (Week 24), patients entered the Long Term Extension (LTE) Period and continue to receive Danicopan.

D->D: Danicopan at Treatment Period 1 and Danicopan at Treatment Period 2; P->D: Placebo at Treatment Period 1 and Danicopan at Treatment Period 2.

Actual values for Total group is summarized only for baseline and the time points from Long Term Extension (LTE).

Baseline is defined as the last non-missing value prior to the first dose of study drug.
Change from baseline is summarized only for patients who have data at baseline and the specified time point.
Patients were randomized to Danicopan or Placebo for 12 weeks as Treatment Period 1. At Week 12, patients randomized to Placebo were switched to Danicopan for an additional 12 weeks as Treatment Period 2 and patients randomized to Danicopan continued on Danicopan during Treatment Period 2. At the end of the Treatment Period 2 (Week 24), patients entered the Long Term Extension (LTE) Period and continue to receive Danicopan.
D->D: Danicopan at Treatment Period 1 and Danicopan at Treatment Period 2; P->D: Placebo at Treatment Period 1 and Danicopan at Treatment Period 2.
Actual values for Total group is summarized only for baseline and the time points from Long Term Extension (LTE).

Baseline is defined as the last non-missing value prior to the first dose of study drug.

Change from baseline is summarized only for patients who have data at baseline and the specified time point.

Patients were randomized to Danicopan or Placebo for 12 weeks as Treatment Period 1. At Week 12, patients randomized to Placebo were switched to Danicopan for an additional 12 weeks as Treatment Period 2 and patients randomized to Danicopan continued on Danicopan during Treatment Period 2. At the end of the Treatment Period 2 (Week 24), patients entered the Long Term Extension (LTE) Period and continue to receive Danicopan.

D->D: Danicopan at Treatment Period 1 and Danicopan at Treatment Period 2; P->D: Placebo at Treatment Period 1 and Danicopan at Treatment Period 2.

Actual values for Total group is summarized only for baseline and the time points from Long Term Extension (LTE).

Baseline is defined as the last non-missing value prior to the first dose of study drug.

Change from baseline is summarized only for patients who have data at baseline and the specified time point.

Patients were randomized to Danicopan or Placebo for 12 weeks as Treatment Period 1. At Week 12, patients randomized to Placebo were switched to Danicopan for an additional 12 weeks as Treatment Period 2 and patients randomized to Danicopan continued on Danicopan during Treatment Period 2. At the end of the Treatment Period 2 (Week 24), patients entered the Long Term Extension (LTE) Period and continue to receive Danicopan.

D->D: Danicopan at Treatment Period 1 and Danicopan at Treatment Period 2; P->D: Placebo at Treatment Period 1 and Danicopan at Treatment Period 2.

Actual values for Total group is summarized only for baseline and the time points from Long Term Extension (LTE).

Baseline is defined as the last non-missing value prior to the first dose of study drug.

Change from baseline is summarized only for patients who have data at baseline and the specified time point.

Patients were randomized to Danicopan or Placebo for 12 weeks as Treatment Period 1. At Week 12, patients randomized to Placebo were switched to Danicopan for an additional 12 weeks as Treatment Period 2 and patients randomized to Danicopan continued on Danicopan during Treatment Period 2. At the end of the Treatment Period 2 (Week 24), patients entered the Long Term Extension (LTE) Period and continue to receive Danicopan.

D->D: Danicopan at Treatment Period 1 and Danicopan at Treatment Period 2; P->D: Placebo at Treatment Period 1 and Danicopan at Treatment Period 2.

Actual values for Total group is summarized only for baseline and the time points from Long Term Extension (LTE).

Baseline is defined as the last non-missing value prior to the first dose of study drug.

Change from baseline is summarized only for patients who have data at baseline and the specified time point.

Patients were randomized to Danicopan or Placebo for 12 weeks as Treatment Period 1. At Week 12, patients randomized to Placebo were switched to Danicopan for an additional 12 weeks as Treatment Period 2 and patients randomized to Danicopan continued on Danicopan during Treatment Period 2. At the end of the Treatment Period 2 (Week 24), patients entered the Long Term Extension (LTE) Period and continue to receive Danicopan.

D->D: Danicopan at Treatment Period 1 and Danicopan at Treatment Period 2; P->D: Placebo at Treatment Period 1 and Danicopan at Treatment Period 2.

Actual values for Total group is summarized only for baseline and the time points from Long Term Extension (LTE).

Baseline is defined as the last non-missing value prior to the first dose of study drug.

Change from baseline is summarized only for patients who have data at baseline and the specified time point.

Patients were randomized to Danicopan or Placebo for 12 weeks as Treatment Period 1. At Week 12, patients randomized to Placebo were switched to Danicopan for an additional 12 weeks as Treatment Period 2 and patients randomized to Danicopan continued on Danicopan during Treatment Period 2. At the end of the Treatment Period 2 (Week 24), patients entered the Long Term Extension (LTE) Period and continue to receive Danicopan.

D->D: Danicopan at Treatment Period 1 and Danicopan at Treatment Period 2; P->D: Placebo at Treatment Period 1 and Danicopan at Treatment Period 2.

Actual values for Total group is summarized only for baseline and the time points from Long Term Extension (LTE).

Baseline is defined as the last non-missing value prior to the first dose of study drug.

Change from baseline is summarized only for patients who have data at baseline and the specified time point.

Patients were randomized to Danicopan or Placebo for 12 weeks as Treatment Period 1. At Week 12, patients randomized to Placebo were switched to Danicopan for an additional 12 weeks as Treatment Period 2 and patients randomized to Danicopan continued on Danicopan during Treatment Period 2. At the end of the Treatment Period 2 (Week 24), patients entered the Long Term Extension (LTE) Period and continue to receive Danicopan.

D->D: Danicopan at Treatment Period 1 and Danicopan at Treatment Period 2; P->D: Placebo at Treatment Period 1 and Danicopan at Treatment Period 2.

Actual values for Total group is summarized only for baseline and the time points from Long Term Extension (LTE).

Baseline is defined as the last non-missing value prior to the first dose of study drug.

Change from baseline is summarized only for patients who have data at baseline and the specified time point.

Patients were randomized to Danicopan or Placebo for 12 weeks as Treatment Period 1. At Week 12, patients randomized to Placebo were switched to Danicopan for an additional 12 weeks as Treatment Period 2 and patients randomized to Danicopan continued on Danicopan during Treatment Period 2. At the end of the Treatment Period 2 (Week 24), patients entered the Long Term Extension (LTE) Period and continue to receive Danicopan.

D->D: Danicopan at Treatment Period 1 and Danicopan at Treatment Period 2; P->D: Placebo at Treatment Period 1 and Danicopan at Treatment Period 2.

Actual values for Total group is summarized only for baseline and the time points from Long Term Extension (LTE).

Baseline is defined as the last non-missing value prior to the first dose of study drug.

Change from baseline is summarized only for patients who have data at baseline and the specified time point.

Patients were randomized to Danicopan or Placebo for 12 weeks as Treatment Period 1. At Week 12, patients randomized to Placebo were switched to Danicopan for an additional 12 weeks as Treatment Period 2 and patients randomized to Danicopan continued on Danicopan during Treatment Period 2. At the end of the Treatment Period 2 (Week 24), patients entered the Long Term Extension (LTE) Period and continue to receive Danicopan.

D->D: Danicopan at Treatment Period 1 and Danicopan at Treatment Period 2; P->D: Placebo at Treatment Period 1 and Danicopan at Treatment Period 2.

Actual values for Total group is summarized only for baseline and the time points from Long Term Extension (LTE).

Change from baseline is summarized only for patients who have data at baseline and the specified time point.

Patients were randomized to Danicopan or Placebo for 12 weeks as Treatment Period 1. At Week 12, patients randomized to Placebo were switched to Danicopan for an additional 12 weeks as Treatment Period 2 and patients randomized to Danicopan continued on Danicopan during Treatment Period 2. At the end of the Treatment Period 2 (Week 24), patients entered the Long Term Extension (LTE) Period and continue to receive Danicopan.

D->D: Danicopan at Treatment Period 1 and Danicopan at Treatment Period 2; P->D: Placebo at Treatment Period 1 and Danicopan at Treatment Period 2.

Actual values for Total group is summarized only for baseline and the time points from Long Term Extension (LTE).

Baseline is defined as the last non-missing value prior to the first dose of study drug.
Change from baseline is summarized only for patients who have data at baseline and the specified time point.
Patients were randomized to Danicopan or Placebo for 12 weeks as Treatment Period 1. At Week 12, patients randomized to Placebo were switched to Danicopan for an additional 12 weeks as Treatment Period 2 and patients randomized to Danicopan continued on Danicopan during Treatment Period 2. At the end of the Treatment Period 2 (Week 24), patients entered the Long Term Extension (LTE) Period and continue to receive Danicopan.
D->D: Danicopan at Treatment Period 1 and Danicopan at Treatment Period 2; P->D: Placebo at Treatment Period 1 and Danicopan at Treatment Period 2.
Actual values for Total group is summarized only for baseline and the time points from Long Term Extension (LTE).

	95% CI for LS MEAN	(-0.1120, -0.0662)	(-0.0617, 0.0068)	(-0.1027, -0.0206)	

LS=Least squares; CI=Confidence Interval; SEM=Standard error of the LS mean.

The difference of LS Means is calculated as the Danicopan mean minus Placebo mean.

Estimates are based on a MMRM model which includes categorical variables for treatment, study visit, and study visit by treatment group interaction as well as continuous covariates baseline absolute reticulocyte count, and the randomization stratification factors of transfusion history (> 2 or ≤ 2 transfusions within 6 months of Screening) and screening Hgb (< 8.5 g/dL or ≥ 8.5 g/dL).

P-value is from difference of LSM from MMRM model. Interaction test p-value is from the same MMRM model with additional sex variable and sex by treatment interaction term.

Baseline is defined as the last non-missing value prior to the first dose of study drug.

Estimates are based on a MMRM model which includes categorical variables for treatment, study visit, and study visit by treatment group interaction as well as continuous covariates baseline absolute reticulocyte count, and the randomization stratification factors of transfusion history (> 2 or ≤ 2 transfusions within 6 months of Screening) and screening Hgb (< 8.5 g/dL or ≥ 8.5 g/dL).

P-value is from difference of LSM from MMRM model. Interaction test p-value is from the same MMRM model with additional sex variable and sex by treatment interaction term.

Baseline is defined as the last non-missing value prior to the first dose of study drug.

	95% CI for LS MEAN	(-0.1203, -0.0745)	(-0.0495, 0.0233)	(-0.1269, -0.0416)	

LS=Least squares; CI=Confidence Interval; SEM=Standard error of the LS mean.

The difference of LS Means is calculated as the Danicopan mean minus Placebo mean.

Estimates are based on a MMRM model which includes categorical variables for treatment, study visit, and study visit by treatment group interaction as well as continuous covariates baseline absolute reticulocyte count, and the randomization stratification factors of transfusion history (> 2 or ≤ 2 transfusions within 6 months of Screening) and screening Hgb (< 8.5 g/dL or ≥ 8.5 g/dL).

P-value is from difference of LSM from MMRM model. Interaction test p-value is from the same MMRM model with additional region variable and region by treatment interaction term.

Baseline is defined as the last non-missing value prior to the first dose of study drug.

Week 6	LS Mean (SEM)	-0.1327 (0.01013)	-0.0174 (0.01379)	-0.1153 (0.01668)	<0.0001
	95% CI for LS MEAN	(-0.1536, -0.1118)	(-0.0460, 0.0113)	(-0.1500, -0.0807)	
Week 8	LS Mean (SEM)	-0.1207 (0.01004)	-0.0170 (0.01291)	-0.1037 (0.01591)	<0.0001
	95% CI for LS MEAN	(-0.1415, -0.0999)	(-0.0440, 0.0100)	(-0.1369, -0.0705)	

LS=Least squares; CI=Confidence Interval; SEM=Standard error of the LS mean.

The difference of LS Means is calculated as the Danicopan mean minus Placebo mean.

Estimates are based on a MMRM model which includes categorical variables for treatment, study visit, and study visit by treatment group interaction as well as continuous covariates baseline absolute reticulocyte count, and the randomization stratification factor of transfusion history (> 2 or ≤ 2 transfusions within 6 months of Screening).

P-value is from difference of LSM from MMRM model. Interaction test p-value is from the same MMRM model with additional screening Hgb level variable and screening Hgb level by treatment interaction term.

Baseline is defined as the last non-missing value prior to the first dose of study drug.

LS=Least squares; CI=Confidence Interval; SEM=Standard error of the LS mean.

The difference of LS Means is calculated as the Danicopan mean minus Placebo mean.

Estimates are based on a MMRM model which includes categorical variables for treatment, study visit, and study visit by treatment group interaction as well as continuous covariates baseline absolute reticulocyte count, and the randomization stratification factors of transfusion history (> 2 or ≤ 2 transfusions within 6 months of Screening) and screening Hgb (< 8.5 g/dL or ≥ 8.5 g/dL).

P-value is from difference of LSM from MMRM model. Interaction test p-value is from the same MMRM model with additional Japanese patients variable and Japanese patients by treatment interaction term.

Baseline is defined as the last non-missing value prior to the first dose of study drug.

	95% CI for LS MEAN	(-0.2287, -0.0771)	(-0.1303, 0.0321)	(-0.1989, -0.0088)	
Week 12	LS Mean (SEM)	-0.1520 (0.03276)	-0.0484 (0.03697)	-0.1036 (0.04343)	0.0366
	95% CI for LS MEAN	(-0.2271, -0.0768)	(-0.1308, 0.0341)	(-0.1995, -0.0078)	

LS=Least squares; CI=Confidence Interval; SEM=Standard error of the LS mean.

The difference of LS Means is calculated as the Danicopan mean minus Placebo mean.

Estimates are based on a MMRM model which includes categorical variables for treatment, study visit, and study visit by treatment group interaction as well as continuous covariates baseline absolute reticulocyte count, and the randomization stratification factors of transfusion history (> 2 or ≤ 2 transfusions within 6 months of Screening) and screening Hgb (< 8.5 g/dL or ≥ 8.5 g/dL).

P-value is from difference of LSM from MMRM model. Interaction test p-value is from the same MMRM model with additional race variable and race by treatment interaction term.

Baseline is defined as the last non-missing value prior to the first dose of study drug.

Min, Max	7.0, 52.0	-10.0, 36.0	13.0, 52.0	-13.0, 19.0		

Baseline is defined as the last non-missing value prior to the first dose of study drug.
Change from baseline is summarized only for patients who have data at baseline and the specified time point.
FACIT-Fatigue score ranges from 0-52, with a higher score indicating less fatigue.
Patients were randomized to Danicopan or Placebo for 12 weeks as Treatment Period 1. At Week 12, patients randomized to Placebo were switched to Danicopan for an additional 12 weeks as Treatment Period 2 and patients randomized to Danicopan continued on Danicopan during Treatment Period 2. At the end of the Treatment Period 2 (Week 24), patients entered the Long Term Extension (LTE) Period and continue to receive Danicopan.
D->D: Danicopan at Treatment Period 1 and Danicopan at Treatment Period 2; P->D: Placebo at Treatment Period 1 and Danicopan at Treatment Period 2.
Actual values for Total group is summarized only for baseline and the time points from Long Term Extension (LTE).

Page 1 of 1

Table GERMANY.2.2.3.1
Change from Baseline in FACIT Fatigue Scores During 12-Week of Treatment Period 1
Analysis Using a Mixed Model for Repeated Measures (MMRM)
Modified Randomized Set

Visit	Statistics	Danicopan (N = 56)	Placebo (N = 25)	Difference (Danicopan-Placebo)	P-value
Week 2	LS Mean (SEM)	5.66 (0.955)	1.19 (1.426)	4.48 (1.689)	0.0098
	95% CI for LS MEAN	(3.76, 7.57)	(-1.65, 4.02)	(1.11, 7.84)	
Week 4	LS Mean (SEM)	7.13 (1.062)	2.65 (1.572)	4.48 (1.874)	0.0194
	95% CI for LS MEAN	(5.02, 9.24)	(-0.48, 5.78)	(0.74, 8.21)	
Week 8	LS Mean (SEM)	7.44 (1.142)	-0.41 (1.703)	7.85 (2.028)	0.0003
	95% CI for LS MEAN	(5.16, 9.72)	(-3.81, 2.99)	(3.80, 11.90)	
Week 12	LS Mean (SEM)	8.00 (0.917)	2.29 (1.321)	5.71 (1.581)	0.0006
	95% CI for LS MEAN	(6.18, 9.83)	(-0.34, 4.93)	(2.56, 8.86)	

LS=Least squares; CI=Confidence Interval; SEM=Standard error of the LS mean.

The difference of LS Means is calculated as the Danicopan mean minus Placebo mean.

Estimates are based on an MMRM that includes fixed, categorical effects of treatment group, study visit, and study visit by treatment group interaction as well as the continuous, fixed covariate of baseline FACIT Fatigue scores value and the randomization stratification factors of transfusion history (> 2 or ≤ 2 transfusions within 6 months of Screening) and screening Hgb (< 8.5 g/dL or ≥ 8.5 g/dL). An Unstructured covariance matrix was used. FACIT Fatigue score ranges from 0-52, with a higher score indicating less fatigue.

P-value is from difference of LSM from MMRM model.

Baseline is defined as the last non-missing value prior to the first dose of study drug.

Table GERMANY.2.6.3.1.1
Summary of Actual Values and Change from Baseline in FACIT Fatigue Scores
During Treatment Period 1 and Period 2 and Long Term Extension by Sex
Modified Randomized Set

Male

Visit/Statistics	D->D (N = 23)		P->D (N = 9)		Total (N = 32)	
	Actual Value	Change from Baseline	Actual Value	Change from Baseline	Actual Value	Change from Baseline
Week 88						
n	6	6	2	2	8	8
Mean (SD)	46.33 (2.338)	10.50 (7.503)	43.00 (12.728)	-1.50 (14.849)	45.50 (5.425)	7.50 (10.128)
Median	47.00	9.50	43.00	-1.50	47.00	8.50
Min, Max	42.0, 48.0	0.0, 22.0	34.0, 52.0	-12.0, 9.0	34.0, 52.0	-12.0, 22.0
Week 104						
n	1	1	0	0	1	1
Mean (SD)	44.00 (NA)	-2.00 (NA)			44.00 (NA)	-2.00 (NA)
Median	44.00	-2.00			44.00	-2.00
Min, Max	44.0, 44.0	-2.0, -2.0			44.0, 44.0	-2.0, -2.0

Baseline is defined as the last non-missing value prior to the first dose of study drug.
Change from baseline is summarized only for patients who have data at baseline and the specified time point.
FACIT-Fatigue score ranges from 0-52, with a higher score indicating less fatigue.
Patients were randomized to Danicopan or Placebo for 12 weeks as Treatment Period 1. At Week 12, patients randomized to Placebo were switched to Danicopan for an additional 12 weeks as Treatment Period 2 and patients randomized to Danicopan continued on Danicopan during Treatment Period 2. At the end of the Treatment Period 2 (Week 24), patients entered the Long Term Extension (LTE) Period and continue to receive Danicopan.
D->D: Danicopan at Treatment Period 1 and Danicopan at Treatment Period 2; P->D: Placebo at Treatment Period 1 and Danicopan at Treatment Period 2.
Actual values for Total group is summarized only for baseline and the time points from Long Term Extension (LTE).

Min, Max	7.0, 52.0	-10.0, 36.0	13.0, 52.0	-13.0, 19.0		

Baseline is defined as the last non-missing value prior to the first dose of study drug.

Change from baseline is summarized only for patients who have data at baseline and the specified time point.

FACIT-Fatigue score ranges from 0-52, with a higher score indicating less fatigue.

Patients were randomized to Danicopan or Placebo for 12 weeks as Treatment Period 1. At Week 12, patients randomized to Placebo were switched to Danicopan for an additional 12 weeks as Treatment Period 2 and patients randomized to Danicopan continued on Danicopan during Treatment Period 2. At the end of the Treatment Period 2 (Week 24), patients entered the Long Term Extension (LTE) Period and continue to receive Danicopan.

D->D: Danicopan at Treatment Period 1 and Danicopan at Treatment Period 2; P->D: Placebo at Treatment Period 1 and Danicopan at Treatment Period 2.

Actual values for Total group is summarized only for baseline and the time points from Long Term Extension (LTE).

Min, Max	9.0, 51.0	-14.0, 27.0	16.0, 49.0	-6.0, 21.0		

Baseline is defined as the last non-missing value prior to the first dose of study drug.

Change from baseline is summarized only for patients who have data at baseline and the specified time point.

FACIT-Fatigue score ranges from 0-52, with a higher score indicating less fatigue.

Patients were randomized to Danicopan or Placebo for 12 weeks as Treatment Period 1. At Week 12, patients randomized to Placebo were switched to Danicopan for an additional 12 weeks as Treatment Period 2 and patients randomized to Danicopan continued on Danicopan during Treatment Period 2. At the end of the Treatment Period 2 (Week 24), patients entered the Long Term Extension (LTE) Period and continue to receive Danicopan.

D->D: Danicopan at Treatment Period 1 and Danicopan at Treatment Period 2; P->D: Placebo at Treatment Period 1 and Danicopan at Treatment Period 2.

Actual values for Total group is summarized only for baseline and the time points from Long Term Extension (LTE).

Baseline is defined as the last non-missing value prior to the first dose of study drug.
Change from baseline is summarized only for patients who have data at baseline and the specified time point.
FACIT-Fatigue score ranges from 0-52, with a higher score indicating less fatigue.
Patients were randomized to Danicopan or Placebo for 12 weeks as Treatment Period 1. At Week 12, patients randomized to Placebo were switched to Danicopan for an additional 12 weeks as Treatment Period 2 and patients randomized to Danicopan continued on Danicopan during Treatment Period 2. At the end of the Treatment Period 2 (Week 24), patients entered the Long Term Extension (LTE) Period and continue to receive Danicopan.
D->D: Danicopan at Treatment Period 1 and Danicopan at Treatment Period 2; P->D: Placebo at Treatment Period 1 and Danicopan at Treatment Period 2.
Actual values for Total group is summarized only for baseline and the time points from Long Term Extension (LTE).

Mean (SD)	42.13 (7.660)	8.92 (7.755)	34.13 (12.569)	0.07 (9.968)		
Median	43.50	6.42	36.00	-2.00		
Min, Max	20.0, 52.0	-2.0, 26.0	10.0, 52.0	-10.0, 26.0		
Week 14						
n	30	30	14	14		
Mean (SD)	43.10 (7.087)	9.32 (9.492)	38.34 (10.866)	2.70 (8.261)		
Median	44.00	7.00	41.50	3.50		
Min, Max	19.0, 52.0	-2.0, 35.0	18.0, 52.0	-15.0, 21.0		

Baseline is defined as the last non-missing value prior to the first dose of study drug.

Change from baseline is summarized only for patients who have data at baseline and the specified time point.

FACIT-Fatigue score ranges from 0-52, with a higher score indicating less fatigue.

Patients were randomized to Danicopan or Placebo for 12 weeks as Treatment Period 1. At Week 12, patients randomized to Placebo were switched to Danicopan for an additional 12 weeks as Treatment Period 2 and patients randomized to Danicopan continued on Danicopan during Treatment Period 2. At the end of the Treatment Period 2 (Week 24), patients entered the Long Term Extension (LTE) Period and continue to receive Danicopan.

D->D: Danicopan at Treatment Period 1 and Danicopan at Treatment Period 2; P->D: Placebo at Treatment Period 1 and Danicopan at Treatment Period 2.

Actual values for Total group is summarized only for baseline and the time points from Long Term Extension (LTE).

Mean (SD)	41.22 (7.635)	6.21 (6.960)	40.27 (9.572)	7.27 (8.900)		
Median	41.00	5.50	43.00	9.00		
Min, Max	25.0, 52.0	-3.0, 22.0	21.0, 52.0	-12.0, 20.0		
Week 20						
n	15	15	8	8		
Mean (SD)	40.60 (9.085)	3.59 (5.056)	33.50 (14.521)	0.38 (15.454)		
Median	43.00	2.83	37.00	4.50		
Min, Max	23.0, 52.0	-3.0, 13.0	9.0, 52.0	-24.0, 15.0		
Week 24						
n	15	15	11	11		
Mean (SD)	38.27 (11.774)	3.12 (6.056)	37.55 (13.148)	4.55 (11.049)		
Median	43.00	2.00	40.00	7.00		
Min, Max	19.0, 52.0	-7.0, 15.0	13.0, 52.0	-13.0, 19.0		

Baseline is defined as the last non-missing value prior to the first dose of study drug.

Change from baseline is summarized only for patients who have data at baseline and the specified time point.

FACIT-Fatigue score ranges from 0-52, with a higher score indicating less fatigue.

Patients were randomized to Danicopan or Placebo for 12 weeks as Treatment Period 1. At Week 12, patients randomized to Placebo were switched to Danicopan for an additional 12 weeks as Treatment Period 2 and patients randomized to Danicopan continued on Danicopan during Treatment Period 2. At the end of the Treatment Period 2 (Week 24), patients entered the Long Term Extension (LTE) Period and continue to receive Danicopan.

D->D: Danicopan at Treatment Period 1 and Danicopan at Treatment Period 2; P->D: Placebo at Treatment Period 1 and Danicopan at Treatment Period 2.

Actual values for Total group is summarized only for baseline and the time points from Long Term Extension (LTE).

Median	41.50	6.50	39.50	-2.50		
Min, Max	32.0, 50.0	-3.0, 22.0	36.0, 46.0	-9.0, 13.0		

Baseline is defined as the last non-missing value prior to the first dose of study drug.
 Change from baseline is summarized only for patients who have data at baseline and the specified time point.
 FACIT-Fatigue score ranges from 0-52, with a higher score indicating less fatigue.
 Patients were randomized to Danicopan or Placebo for 12 weeks as Treatment Period 1. At Week 12, patients randomized to Placebo were switched to Danicopan for an additional 12 weeks as Treatment Period 2 and patients randomized to Danicopan continued on Danicopan during Treatment Period 2. At the end of the Treatment Period 2 (Week 24), patients entered the Long Term Extension (LTE) Period and continue to receive Danicopan.
 D->D: Danicopan at Treatment Period 1 and Danicopan at Treatment Period 2; P->D: Placebo at Treatment Period 1 and Danicopan at Treatment Period 2.
 Actual values for Total group is summarized only for baseline and the time points from Long Term Extension (LTE).
