EORTC QLQ-C30 is European Organization for Research and Treatment of Cancer Quality of Life Questionnaire-Core 30 Scale. Symptom scales include fatigue, nausea and vomiting, pain, dyspnoea, insomnia, appetite loss, constipation, diarrhoea, and financial difficulties.

Each subscale has a range of 0 - 100%. A high scale score represents a higher response level. Thus a high score for a functional scale represents a high level of functioning but a high score for a symptom scale represents a high level of symptomatology/problem.

Patients were randomized to Danicopan or Placebo for 12 weeks as Treatment Period 1. At Week 12, patients randomized to Placebo were switched to Danicopan for an additional 12 weeks as Treatment Period 2 and patients randomized to Danicopan continued on Danicopan during Treatment Period 2. At the end of the Treatment Period 2 (Week 24), patients entered the Long Term Extension (LTE) Period and continue to receive Danicopan.

D->D: Danicopan at Treatment Period 1 and Danicopan at Treatment Period 2; P->D: Placebo at Treatment Period 1 and Danicopan at Treatment Period 2. Change from baseline is summarized only for patients who have data at baseline and the specified time point.

Baseline is defined as the last non-missing value prior to the first dose of study drug.

Actual values for Total group is summarized only for baseline and the time points from Long Term Extension (LTE).

Min, Max	0.0, 100.0	-77.8, 33.3	0.0, 100.0	-55.6, 77.8		

EORTC QLQ-C30 is European Organization for Research and Treatment of Cancer Quality of Life Questionnaire-Core 30 Scale. Symptom scales include fatigue, nausea and vomiting, pain, dyspnoea, insomnia, appetite loss, constipation, diarrhoea, and financial difficulties.

Each subscale has a range of 0 - 100%. A high scale score represents a higher response level. Thus a high score for a functional scale represents a high level of functioning but a high score for a symptom scale represents a high level of symptomatology/problem.

Patients were randomized to Danicopan or Placebo for 12 weeks as Treatment Period 1. At Week 12, patients randomized to Placebo were switched to Danicopan for an additional 12 weeks as Treatment Period 2 and patients randomized to Danicopan continued on Danicopan during Treatment Period 2. At the end of the Treatment Period 2 (Week 24), patients entered the Long Term Extension (LTE) Period and continue to receive Danicopan.

D->D: Danicopan at Treatment Period 1 and Danicopan at Treatment Period 2; P->D: Placebo at Treatment Period 1 and Danicopan at Treatment Period 2.

Change from baseline is summarized only for patients who have data at baseline and the specified time point.

Baseline is defined as the last non-missing value prior to the first dose of study drug.

Actual values for Total group is summarized only for baseline and the time points from Long Term Extension (LTE).

EORTC QLQ-C30 is European Organization for Research and Treatment of Cancer Quality of Life Questionnaire-Core 30 Scale. Symptom scales include fatigue, nausea and vomiting, pain, dyspnoea, insomnia, appetite loss, constipation, diarrhoea, and financial difficulties.

Each subscale has a range of 0 - 100%. A high scale score represents a higher response level. Thus a high score for a functional scale represents a high level of functioning but a high score for a symptom scale represents a high level of symptomatology/problem.

Patients were randomized to Danicopan or Placebo for 12 weeks as Treatment Period 1. At Week 12, patients randomized to Placebo were switched to Danicopan for an additional 12 weeks as Treatment Period 2 and patients randomized to Danicopan continued on Danicopan during Treatment Period 2. At the end of the Treatment Period 2 (Week 24), patients entered the Long Term Extension (LTE) Period and continue to receive Danicopan.

D->D: Danicopan at Treatment Period 1 and Danicopan at Treatment Period 2; P->D: Placebo at Treatment Period 1 and Danicopan at Treatment Period 2. Change from baseline is summarized only for patients who have data at baseline and the specified time point.

Baseline is defined as the last non-missing value prior to the first dose of study drug.

Actual values for Total group is summarized only for baseline and the time points from Long Term Extension (LTE).

EORTC QLQ-C30 is European Organization for Research and Treatment of Cancer Quality of Life Questionnaire-Core 30 Scale. Symptom scales include fatigue, nausea and vomiting, pain, dyspnoea, insomnia, appetite loss, constipation, diarrhoea, and financial difficulties.

Each subscale has a range of 0 - 100%. A high scale score represents a higher response level. Thus a high score for a functional scale represents a high level of functioning but a high score for a symptom scale represents a high level of symptomatology/problem.

Patients were randomized to Danicopan or Placebo for 12 weeks as Treatment Period 1. At Week 12, patients randomized to Placebo were switched to Danicopan for an additional 12 weeks as Treatment Period 2 and patients randomized to Danicopan continued on Danicopan during Treatment Period 2. At the end of the Treatment Period 2 (Week 24), patients entered the Long Term Extension (LTE) Period and continue to receive Danicopan.

D->D: Danicopan at Treatment Period 1 and Danicopan at Treatment Period 2; P->D: Placebo at Treatment Period 1 and Danicopan at Treatment Period 2.

Change from baseline is summarized only for patients who have data at baseline and the specified time point.

Baseline is defined as the last non-missing value prior to the first dose of study drug.

Actual values for Total group is summarized only for baseline and the time points from Long Term Extension (LTE).

EORTC QLQ-C30 is European Organization for Research and Treatment of Cancer Quality of Life Questionnaire-Core 30 Scale. Symptom scales include fatigue, nausea and vomiting, pain, dyspnoea, insomnia, appetite loss, constipation, diarrhoea, and financial difficulties.

Each subscale has a range of 0 - 100%. A high scale score represents a higher response level. Thus a high score for a functional scale represents a high level of functioning but a high score for a symptom scale represents a high level of symptomatology/problem.

Patients were randomized to Danicopan or Placebo for 12 weeks as Treatment Period 1. At Week 12, patients randomized to Placebo were switched to Danicopan for an additional 12 weeks as Treatment Period 2 and patients randomized to Danicopan continued on Danicopan during Treatment Period 2. At the end of the Treatment Period 2 (Week 24), patients entered the Long Term Extension (LTE) Period and continue to receive Danicopan.

D->D: Danicopan at Treatment Period 1 and Danicopan at Treatment Period 2; P->D: Placebo at Treatment Period 1 and Danicopan at Treatment Period 2.

Change from baseline is summarized only for patients who have data at baseline and the specified time point.

Baseline is defined as the last non-missing value prior to the first dose of study drug.

Actual values for Total group is summarized only for baseline and the time points from Long Term Extension (LTE).

At Week 12, patients randomized to Placebo were switched to Danicopan for an additional 12 weeks as Treatment Period 2 and patients randomized to Danicopan continued on Danicopan during Treatment Period 2. At the end of the Treatment Period 2 (Week 24), patients entered the Long Term Extension (LTE) Period and continue to receive Danicopan.

D->D: Danicopan at Treatment Period 1 and Danicopan at Treatment Period 2; P->D: Placebo at Treatment Period 1 and Danicopan at Treatment Period 2. Change from baseline is summarized only for patients who have data at baseline and the specified time point.

Baseline is defined as the last non-missing value prior to the first dose of study drug.

Actual values for Total group is summarized only for baseline and the time points from Long Term Extension (LTE).

EORTC QLQ-C30 is European Organization for Research and Treatment of Cancer Quality of Life Questionnaire-Core 30 Scale. Symptom scales include fatigue, nausea and vomiting, pain, dyspnoea, insomnia, appetite loss, constipation, diarrhoea, and financial difficulties.

Each subscale has a range of 0 - 100%. A high scale score represents a higher response level. Thus a high score for a functional scale represents a high level of functioning but a high score for a symptom scale represents a high level of symptomatology/problem.

Patients were randomized to Danicopan or Placebo for 12 weeks as Treatment Period 1. At Week 12, patients randomized to Placebo were switched to Danicopan for an additional 12 weeks as Treatment Period 2 and patients randomized to Danicopan continued on Danicopan during Treatment Period 2. EORTC QLQ-C30 is European Organization for Research and Treatment of Cancer Quality of Life Questionnaire-Core 30 Scale. Symptom scales include fatigue, nausea and vomiting, pain, dyspnoea, insomnia, appetite loss, constipation, diarrhoea, and financial difficulties. Each subscale has a range of 0 - 100%. A high scale score represents a higher response level. Thus a high score for a functional scale represents a high level of functioning but a high score for a symptom scale represents a high level of symptomatology/problem. Patients were randomized to Danicopan or Placebo for 12 weeks as Treatment Period 1. At Week 12, patients randomized to Placebo were switched to Danicopan for an additional 12 weeks as Treatment Period 2 and patients randomized to Danicopan continued on Danicopan during Treatment Period 2. At the end of the Treatment Period 2 (Week 24), patients entered the Long Term Extension (LTE) Period and continue to receive Danicopan. D->D: Danicopan at Treatment Period 1 and Danicopan at Treatment Period 2; P->D: Placebo at Treatment Period 1 and Danicopan at Treatment Period 2. Change from baseline is summarized only for patients who have data at baseline and the specified time point. Baseline is defined as the last non-missing value prior to the first dose of study drug. Actual values for Total group is summarized only for baseline and the time points from Long Term Extension (LTE).

EORTC QLQ-C30 is European Organization for Research and Treatment of Cancer Quality of Life Questionnaire-Core 30 Scale. Symptom scales include fatigue, nausea and vomiting, pain, dyspnoea, insomnia, appetite loss, constipation, diarrhoea, and financial difficulties. Each subscale has a range of 0 - 100%. A high scale score represents a higher response level. Thus a high score for a functional scale represents a high level of functioning but a high score for a symptom scale represents a high level of symptomatology/problem. Patients were randomized to Danicopan or Placebo for 12 weeks as Treatment Period 1. At Week 12, patients randomized to Placebo were switched to Danicopan for an additional 12 weeks as Treatment Period 2 and patients randomized to Danicopan continued on Danicopan during Treatment Period 2. At the end of the Treatment Period 2 (Week 24), patients entered the Long Term Extension (LTE) Period and continue to receive Danicopan. D->D: Danicopan at Treatment Period 1 and Danicopan at Treatment Period 2; P->D: Placebo at Treatment Period 1 and Danicopan at Treatment Period 2. Change from baseline is summarized only for patients who have data at baseline and the specified time point. Baseline is defined as the last non-missing value prior to the first dose of study drug. Actual values for Total group is summarized only for baseline and the time points from Long Term Extension (LTE).

EORTC QLQ-C30 is European Organization for Research and Treatment of Cancer Quality of Life Questionnaire-Core 30 Scale. Symptom scales include fatigue, nausea and vomiting, pain, dyspnoea, insomnia, appetite loss, constipation, diarrhoea, and financial difficulties.

Each subscale has a range of 0 - 100%. A high scale score represents a higher response level. Thus a high score for a functional scale represents a high level of functioning but a high score for a symptom scale represents a high level of symptomatology/problem.

Patients were randomized to Danicopan or Placebo for 12 weeks as Treatment Period 1. At Week 12, patients randomized to Placebo were switched to Danicopan for an additional 12 weeks as Treatment Period 2 and patients randomized to Danicopan continued on Danicopan during Treatment Period 2. At the end of the Treatment Period 2 (Week 24), patients entered the Long Term Extension (LTE) Period and continue to receive Danicopan.

D->D: Danicopan at Treatment Period 1 and Danicopan at Treatment Period 2; P->D: Placebo at Treatment Period 1 and Danicopan at Treatment Period 2.

Change from baseline is summarized only for patients who have data at baseline and the specified time point.

Baseline is defined as the last non-missing value prior to the first dose of study drug.

Actual values for Total group is summarized only for baseline and the time points from Long Term Extension (LTE).

EORTC QLQ-C30 is European Organization for Research and Treatment of Cancer Quality of Life Questionnaire-Core 30 Scale. Symptom scales include fatigue, nausea and vomiting, pain, dyspnoea, insomnia, appetite loss, constipation, diarrhoea, and financial difficulties. Each subscale has a range of 0 - 100%. A high scale score represents a higher response level. Thus a high score for a functional scale represents a high level of functioning but a high score for a symptom scale represents a high level of symptomatology/problem. Patients were randomized to Danicopan or Placebo for 12 weeks as Treatment Period 1. At Week 12, patients randomized to Placebo were switched to Danicopan for an additional 12 weeks as Treatment Period 2 and patients randomized to Danicopan continued on Danicopan during Treatment Period 2. At the end of the Treatment Period 2 (Week 24), patients entered the Long Term Extension (LTE) Period and continue to receive Danicopan. D->D: Danicopan at Treatment Period 1 and Danicopan at Treatment Period 2; P->D: Placebo at Treatment Period 1 and Danicopan at Treatment Period 2. Change from baseline is summarized only for patients who have data at baseline and the specified time point. Baseline is defined as the last non-missing value prior to the first dose of study drug. Actual values for Total group is summarized only for baseline and the time points from Long Term Extension (LTE).

EORTC QLQ-C30 is European Organization for Research and Treatment of Cancer Quality of Life Questionnaire-Core 30 Scale. Symptom scales include fatigue, nausea and vomiting, pain, dyspnoea, insomnia, appetite loss, constipation, diarrhoea, and financial difficulties.

Each subscale has a range of 0 - 100%. A high scale score represents a higher response level. Thus a high score for a functional scale represents a high level of functioning but a high score for a symptom scale represents a high level of symptomatology/problem.

Patients were randomized to Danicopan or Placebo for 12 weeks as Treatment Period 1. At Week 12, patients randomized to Placebo were switched to Danicopan for an additional 12 weeks as Treatment Period 2 and patients randomized to Danicopan continued on Danicopan during Treatment Period 2. At the end of the Treatment Period 2 (Week 24), patients entered the Long Term Extension (LTE) Period and continue to receive Danicopan.

D->D: Danicopan at Treatment Period 1 and Danicopan at Treatment Period 2; P->D: Placebo at Treatment Period 1 and Danicopan at Treatment Period 2.

Change from baseline is summarized only for patients who have data at baseline and the specified time point.

Baseline is defined as the last non-missing value prior to the first dose of study drug.

Actual values for Total group is summarized only for baseline and the time points from Long Term Extension (LTE).

EORTC QLQ-C30 is European Organization for Research and Treatment of Cancer Quality of Life Questionnaire-Core 30 Scale. Symptom scales include fatigue, nausea and vomiting, pain, dyspnoea, insomnia, appetite loss, constipation, diarrhoea, and financial difficulties. Each subscale has a range of 0 - 100%. A high scale score represents a higher response level. Thus a high score for a functional scale represents a high level of functioning but a high score for a symptom scale represents a high level of symptomatology/problem. Patients were randomized to Danicopan or Placebo for 12 weeks as Treatment Period 1. At Week 12, patients randomized to Placebo were switched to Danicopan for an additional 12 weeks as Treatment Period 2 and patients randomized to Danicopan continued on Danicopan during Treatment Period 2. At the end of the Treatment Period 2 (Week 24), patients entered the Long Term Extension (LTE) Period and continue to receive Danicopan.

D->D: Danicopan at Treatment Period 1 and Danicopan at Treatment Period 2; P->D: Placebo at Treatment Period 1 and Danicopan at Treatment Period 2. Change from baseline is summarized only for patients who have data at baseline and the specified time point.

Baseline is defined as the last non-missing value prior to the first dose of study drug.

Actual values for Total group is summarized only for baseline and the time points from Long Term Extension (LTE).

EORTC QLQ-C30 is European Organization for Research and Treatment of Cancer Quality of Life Questionnaire-Core 30 Scale. Symptom scales include fatigue, nausea and vomiting, pain, dyspnoea, insomnia, appetite loss, constipation, diarrhoea, and financial difficulties.

Each subscale has a range of 0 - 100%. A high scale score represents a higher response level. Thus a high score for a functional scale represents a high level of functioning but a high score for a symptom scale represents a high level of symptomatology/problem.

Patients were randomized to Danicopan or Placebo for 12 weeks as Treatment Period 1. At Week 12, patients randomized to Placebo were switched to Danicopan for an additional 12 weeks as Treatment Period 2 and patients randomized to Danicopan continued on Danicopan during Treatment Period 2. At the end of the Treatment Period 2 (Week 24), patients entered the Long Term Extension (LTE) Period and continue to receive Danicopan.

D->D: Danicopan at Treatment Period 1 and Danicopan at Treatment Period 2; P->D: Placebo at Treatment Period 1 and Danicopan at Treatment Period 2.

Change from baseline is summarized only for patients who have data at baseline and the specified time point.

Baseline is defined as the last non-missing value prior to the first dose of study drug.

Actual values for Total group is summarized only for baseline and the time points from Long Term Extension (LTE).

EORTC QLQ-C30 is European Organization for Research and Treatment of Cancer Quality of Life Questionnaire-Core 30 Scale. Symptom scales include fatigue, nausea and vomiting, pain, dyspnoea, insomnia, appetite loss, constipation, diarrhoea, and financial difficulties.

Each subscale has a range of 0 - 100%. A high scale score represents a higher response level. Thus a high score for a functional scale represents a high level of functioning but a high score for a symptom scale represents a high level of symptomatology/problem.

Patients were randomized to Danicopan or Placebo for 12 weeks as Treatment Period 1. At Week 12, patients randomized to Placebo were switched to Danicopan for an additional 12 weeks as Treatment Period 2 and patients randomized to Danicopan continued on Danicopan during Treatment Period 2. At the end of the Treatment Period 2 (Week 24), patients entered the Long Term Extension (LTE) Period and continue to receive Danicopan.

D->D: Danicopan at Treatment Period 1 and Danicopan at Treatment Period 2; P->D: Placebo at Treatment Period 1 and Danicopan at Treatment Period 2. Change from baseline is summarized only for patients who have data at baseline and the specified time point.

Baseline is defined as the last non-missing value prior to the first dose of study drug.

Actual values for Total group is summarized only for baseline and the time points from Long Term Extension (LTE).

EORTC QLQ-C30 is European Organization for Research and Treatment of Cancer Quality of Life Questionnaire-Core 30 Scale. Symptom scales include fatigue, nausea and vomiting, pain, dyspnoea, insomnia, appetite loss, constipation, diarrhoea, and financial difficulties. Each subscale has a range of 0 - 100%. A high scale score represents a higher response level. Thus a high score for a functional scale represents a high level of functioning but a high score for a symptom scale represents a high level of symptomatology/problem.

Patients were randomized to Danicopan or Placebo for 12 weeks as Treatment Period 1. At Week 12, patients randomized to Placebo were switched to Danicopan for an additional 12 weeks as Treatment Period 2 and patients randomized to Danicopan continued on Danicopan during Treatment Period 2. At the end of the Treatment Period 2 (Week 24), patients entered the Long Term Extension (LTE) Period and continue to receive Danicopan.

D->D: Danicopan at Treatment Period 1 and Danicopan at Treatment Period 2; P->D: Placebo at Treatment Period 1 and Danicopan at Treatment Period 2. Change from baseline is summarized only for patients who have data at baseline and the specified time point.

Baseline is defined as the last non-missing value prior to the first dose of study drug.

Actual values for Total group is summarized only for baseline and the time points from Long Term Extension (LTE).

EORTC QLQ-C30 is European Organization for Research and Treatment of Cancer Quality of Life Questionnaire-Core 30 Scale. Symptom scales include fatigue, nausea and vomiting, pain, dyspnoea, insomnia, appetite loss, constipation, diarrhoea, and financial difficulties.

Each subscale has a range of 0 - 100%. A high scale score represents a higher response level. Thus a high score for a functional scale represents a high level of functioning but a high score for a symptom scale represents a high level of symptomatology/problem.

Patients were randomized to Danicopan or Placebo for 12 weeks as Treatment Period 1. At Week 12, patients randomized to Placebo were switched to Danicopan for an additional 12 weeks as Treatment Period 2 and patients randomized to Danicopan continued on Danicopan during Treatment Period 2. At the end of the Treatment Period 2 (Week 24), patients entered the Long Term Extension (LTE) Period and continue to receive Danicopan.

D->D: Danicopan at Treatment Period 1 and Danicopan at Treatment Period 2; P->D: Placebo at Treatment Period 1 and Danicopan at Treatment Period 2.

Change from baseline is summarized only for patients who have data at baseline and the specified time point.

Baseline is defined as the last non-missing value prior to the first dose of study drug.

Actual values for Total group is summarized only for baseline and the time points from Long Term Extension (LTE).

EORTC QLQ-C30 is European Organization for Research and Treatment of Cancer Quality of Life Questionnaire-Core 30 Scale. Symptom scales include fatigue, nausea and vomiting, pain, dyspnoea, insomnia, appetite loss, constipation, diarrhoea, and financial difficulties.

Each subscale has a range of 0 - 100%. A high scale score represents a higher response level. Thus a high score for a functional scale represents a high level of functioning but a high score for a symptom scale represents a high level of symptomatology/problem.

Patients were randomized to Danicopan or Placebo for 12 weeks as Treatment Period 1. At Week 12, patients randomized to Placebo were switched to Danicopan for an additional 12 weeks as Treatment Period 2 and patients randomized to Danicopan continued on Danicopan during Treatment Period 2. At the end of the Treatment Period 2 (Week 24), patients entered the Long Term Extension (LTE) Period and continue to receive Danicopan.

D->D: Danicopan at Treatment Period 1 and Danicopan at Treatment Period 2; P->D: Placebo at Treatment Period 1 and Danicopan at Treatment Period 2. Change from baseline is summarized only for patients who have data at baseline and the specified time point.

Baseline is defined as the last non-missing value prior to the first dose of study drug.

Actual values for Total group is summarized only for baseline and the time points from Long Term Extension (LTE).

EORTC QLQ-C30 is European Organization for Research and Treatment of Cancer Quality of Life Questionnaire-Core 30 Scale. Symptom scales include fatigue, nausea and vomiting, pain, dyspnoea, insomnia, appetite loss, constipation, diarrhoea, and financial difficulties. Each subscale has a range of 0 - 100%. A high scale score represents a higher response level. Thus a high score for a functional scale represents a high level of functioning but a high score for a symptom scale represents a high level of symptomatology/problem. Patients were randomized to Danicopan or Placebo for 12 weeks as Treatment Period 1. At Week 12, patients randomized to Placebo were switched to Danicopan for an additional 12 weeks as Treatment Period 2 and patients randomized to Danicopan continued on Danicopan during Treatment Period 2. At the end of the Treatment Period 2 (Week 24), patients entered the Long Term Extension (LTE) Period and continue to receive Danicopan.

D->D: Danicopan at Treatment Period 1 and Danicopan at Treatment Period 2; P->D: Placebo at Treatment Period 1 and Danicopan at Treatment Period 2. Change from baseline is summarized only for patients who have data at baseline and the specified time point.

Baseline is defined as the last non-missing value prior to the first dose of study drug.

Actual values for Total group is summarized only for baseline and the time points from Long Term Extension (LTE).

EORTC QLQ-C30 is European Organization for Research and Treatment of Cancer Quality of Life Questionnaire-Core 30 Scale. Symptom scales include fatigue, nausea and vomiting, pain, dyspnoea, insomnia, appetite loss, constipation, diarrhoea, and financial difficulties. Each subscale has a range of 0 - 100%. A high scale score represents a higher response level. Thus a high score for a functional scale represents a high level of functioning but a high score for a symptom scale represents a high level of symptomatology/problem. Patients were randomized to Danicopan or Placebo for 12 weeks as Treatment Period 1. At Week 12, patients randomized to Placebo were switched to Danicopan for an additional 12 weeks as Treatment Period 2 and patients randomized to Danicopan continued on Danicopan during Treatment Period 2. At the end of the Treatment Period 2 (Week 24), patients entered the Long Term Extension (LTE) Period and continue to receive Danicopan.

D->D: Danicopan at Treatment Period 1 and Danicopan at Treatment Period 2; P->D: Placebo at Treatment Period 1 and Danicopan at Treatment Period 2. Change from baseline is summarized only for patients who have data at baseline and the specified time point.

Baseline is defined as the last non-missing value prior to the first dose of study drug.

Actual values for Total group is summarized only for baseline and the time points from Long Term Extension (LTE).

EORTC QLQ-C30 is European Organization for Research and Treatment of Cancer Quality of Life Questionnaire-Core 30 Scale. Symptom scales include fatigue, nausea and vomiting, pain, dyspnoea, insomnia, appetite loss, constipation, diarrhoea, and financial difficulties.

Each subscale has a range of 0 - 100%. A high scale score represents a higher response level. Thus a high score for a functional scale represents a high level of functioning but a high score for a symptom scale represents a high level of symptomatology/problem.

Patients were randomized to Danicopan or Placebo for 12 weeks as Treatment Period 1. At Week 12, patients randomized to Placebo were switched to Danicopan for an additional 12 weeks as Treatment Period 2 and patients randomized to Danicopan continued on Danicopan during Treatment Period 2. At the end of the Treatment Period 2 (Week 24), patients entered the Long Term Extension (LTE) Period and continue to receive Danicopan.

D->D: Danicopan at Treatment Period 1 and Danicopan at Treatment Period 2; P->D: Placebo at Treatment Period 1 and Danicopan at Treatment Period 2. Change from baseline is summarized only for patients who have data at baseline and the specified time point.

Baseline is defined as the last non-missing value prior to the first dose of study drug.

Actual values for Total group is summarized only for baseline and the time points from Long Term Extension (LTE).

EORTC QLQ-C30 is European Organization for Research and Treatment of Cancer Quality of Life Questionnaire-Core 30 Scale. Symptom scales include fatigue, nausea and vomiting, pain, dyspnoea, insomnia, appetite loss, constipation, diarrhoea, and financial difficulties.

Each subscale has a range of 0 - 100%. A high scale score represents a higher response level. Thus a high score for a functional scale represents a high level of functioning but a high score for a symptom scale represents a high level of symptomatology/problem.

Patients were randomized to Danicopan or Placebo for 12 weeks as Treatment Period 1. At Week 12, patients randomized to Placebo were switched to Danicopan for an additional 12 weeks as Treatment Period 2 and patients randomized to Danicopan continued on Danicopan during Treatment Period 2. At the end of the Treatment Period 2 (Week 24), patients entered the Long Term Extension (LTE) Period and continue to receive Danicopan.

D->D: Danicopan at Treatment Period 1 and Danicopan at Treatment Period 2; P->D: Placebo at Treatment Period 1 and Danicopan at Treatment Period 2. Change from baseline is summarized only for patients who have data at baseline and the specified time point.

Baseline is defined as the last non-missing value prior to the first dose of study drug.

Actual values for Total group is summarized only for baseline and the time points from Long Term Extension (LTE).

EORTC QLQ-C30 is European Organization for Research and Treatment of Cancer Quality of Life Questionnaire-Core 30 Scale. Symptom scales include fatigue, nausea and vomiting, pain, dyspnoea, insomnia, appetite loss, constipation, diarrhoea, and financial difficulties.

Each subscale has a range of 0 - 100%. A high scale score represents a higher response level. Thus a high score for a functional scale represents a high level of functioning but a high score for a symptom scale represents a high level of symptomatology/problem.

Patients were randomized to Danicopan or Placebo for 12 weeks as Treatment Period 1. At Week 12, patients randomized to Placebo were switched to Danicopan for an additional 12 weeks as Treatment Period 2 and patients randomized to Danicopan continued on Danicopan during Treatment Period 2. At the end of the Treatment Period 2 (Week 24), patients entered the Long Term Extension (LTE) Period and continue to receive Danicopan.

D->D: Danicopan at Treatment Period 1 and Danicopan at Treatment Period 2; P->D: Placebo at Treatment Period 1 and Danicopan at Treatment Period 2.

Change from baseline is summarized only for patients who have data at baseline and the specified time point.

Baseline is defined as the last non-missing value prior to the first dose of study drug.

Actual values for Total group is summarized only for baseline and the time points from Long Term Extension (LTE).

EORTC QLQ-C30 is European Organization for Research and Treatment of Cancer Quality of Life Questionnaire-Core 30 Scale. Symptom scales include fatigue, nausea and vomiting, pain, dyspnoea, insomnia, appetite loss, constipation, diarrhoea, and financial difficulties.

Each subscale has a range of 0 - 100%. A high scale score represents a higher response level. Thus a high score for a functional scale represents a high level of functioning but a high score for a symptom scale represents a high level of symptomatology/problem.

Patients were randomized to Danicopan or Placebo for 12 weeks as Treatment Period 1. At Week 12, patients randomized to Placebo were switched to Danicopan for an additional 12 weeks as Treatment Period 2 and patients randomized to Danicopan continued on Danicopan during Treatment Period 2. At the end of the Treatment Period 2 (Week 24), patients entered the Long Term Extension (LTE) Period and continue to receive Danicopan.

D->D: Danicopan at Treatment Period 1 and Danicopan at Treatment Period 2; P->D: Placebo at Treatment Period 1 and Danicopan at Treatment Period 2. Change from baseline is summarized only for patients who have data at baseline and the specified time point.

Baseline is defined as the last non-missing value prior to the first dose of study drug.

Actual values for Total group is summarized only for baseline and the time points from Long Term Extension (LTE).

EORTC QLQ-C30 is European Organization for Research and Treatment of Cancer Quality of Life Questionnaire-Core 30 Scale. Symptom scales include fatigue, nausea and vomiting, pain, dyspnoea, insomnia, appetite loss, constipation, diarrhoea, and financial difficulties.

Each subscale has a range of 0 - 100%. A high scale score represents a higher response level. Thus a high score for a functional scale represents a high level of functioning but a high score for a symptom scale represents a high level of symptomatology/problem.

Patients were randomized to Danicopan or Placebo for 12 weeks as Treatment Period 1. At Week 12, patients randomized to Placebo were switched to Danicopan for an additional 12 weeks as Treatment Period 2 and patients randomized to Danicopan continued on Danicopan during Treatment Period 2. At the end of the Treatment Period 2 (Week 24), patients entered the Long Term Extension (LTE) Period and continue to receive Danicopan.

D->D: Danicopan at Treatment Period 1 and Danicopan at Treatment Period 2; P->D: Placebo at Treatment Period 1 and Danicopan at Treatment Period 2.

Change from baseline is summarized only for patients who have data at baseline and the specified time point.

Baseline is defined as the last non-missing value prior to the first dose of study drug.

Actual values for Total group is summarized only for baseline and the time points from Long Term Extension (LTE).

EORTC QLQ-C30 is European Organization for Research and Treatment of Cancer Quality of Life Questionnaire-Core 30 Scale. Symptom scales include fatigue, nausea and vomiting, pain, dyspnoea, insomnia, appetite loss, constipation, diarrhoea, and financial difficulties. Each subscale has a range of 0 - 100%. A high scale score represents a higher response level. Thus a high score for a functional scale represents a high level of functioning but a high score for a symptom scale represents a high level of symptomatology/problem. Patients were randomized to Danicopan or Placebo for 12 weeks as Treatment Period 1. At Week 12, patients randomized to Placebo were switched to Danicopan for an additional 12 weeks as Treatment Period 2 and patients randomized to Danicopan continued on Danicopan during Treatment Period 2. At the end of the Treatment Period 2 (Week 24), patients entered the Long Term Extension (LTE) Period and continue to receive Danicopan. D->D: Danicopan at Treatment Period 1 and Danicopan at Treatment Period 2; P->D: Placebo at Treatment Period 1 and Danicopan at Treatment Period 2. Change from baseline is summarized only for patients who have data at baseline and the specified time point. Baseline is defined as the last non-missing value prior to the first dose of study drug.

Actual values for Total group is summarized only for baseline and the time points from Long Term Extension (LTE).

At Week 12, patients randomized to Placebo were switched to Danicopan for an additional 12 weeks as Treatment Period 2 and patients randomized to Danicopan continued on Danicopan during Treatment Period 2. At the end of the Treatment Period 2 (Week 24), patients entered the Long Term Extension (LTE) Period and continue to receive Danicopan.

D->D: Danicopan at Treatment Period 1 and Danicopan at Treatment Period 2; P->D: Placebo at Treatment Period 1 and Danicopan at Treatment Period 2.

Change from baseline is summarized only for patients who have data at baseline and the specified time point.

Baseline is defined as the last non-missing value prior to the first dose of study drug.

Actual values for Total group is summarized only for baseline and the time points from Long Term Extension (LTE).

EORTC QLQ-C30 is European Organization for Research and Treatment of Cancer Quality of Life Questionnaire-Core 30 Scale. Symptom scales include fatigue, nausea and vomiting, pain, dyspnoea, insomnia, appetite loss, constipation, diarrhoea, and financial difficulties.

Each subscale has a range of 0 - 100%. A high scale score represents a higher response level. Thus a high score for a functional scale represents a high level of functioning but a high score for a symptom scale represents a high level of symptomatology/problem.

Patients were randomized to Danicopan or Placebo for 12 weeks as Treatment Period 1. At Week 12, patients randomized to Placebo were switched to Danicopan for an additional 12 weeks as Treatment Period 2 and patients randomized to Danicopan continued on Danicopan during Treatment Period 2. EORTC QLQ-C30 is European Organization for Research and Treatment of Cancer Quality of Life Questionnaire-Core 30 Scale. Symptom scales include fatigue, nausea and vomiting, pain, dyspnoea, insomnia, appetite loss, constipation, diarrhoea, and financial difficulties.

Each subscale has a range of 0 - 100%. A high scale score represents a higher response level. Thus a high score for a functional scale represents a high level of functioning but a high score for a symptom scale represents a high level of symptomatology/problem.

LS=Least squares; CI=Confidence Interval; SEM=Standard error of the LS mean.

The difference of LS Means is calculated as the Danicopan mean minus Placebo mean.

Estimates are based on an MMRM that includes fixed, categorical effects of treatment group, study visit, and study visit by treatment group interaction as well as the continuous, fixed covariate of baseline EORTC QLQ-C30 score value and the randomization stratification factors of transfusion history (> 2 or ≤ 2 transfusions within 6 months of Screening) and screening Hgb (< 8.5 g/dL or ≥ 8.5 g/dL).

P-value is from difference of LSM from MMRM model. Interaction test p-value is from the same MMRM model with additional sex variable and sex by treatment interaction term.

Baseline is defined as the last non-missing value prior to the first dose of study drug.

EORTC QLQ-C30 is European Organization for Research and Treatment of Cancer Quality of Life Questionnaire-Core 30 Scale. Symptom scales include fatigue, nausea and vomiting, pain, dyspnoea, insomnia, appetite loss, constipation, diarrhoea, and financial difficulties.

Each subscale has a range of 0 - 100%. A high scale score represents a higher response level. Thus a high score for a functional scale represents a high level of functioning but a high score for a symptom scale represents a high level of symptomatology/problem.

LS=Least squares; CI=Confidence Interval; SEM=Standard error of the LS mean.

The difference of LS Means is calculated as the Danicopan mean minus Placebo mean.

Estimates are based on an MMRM that includes fixed, categorical effects of treatment group, study visit, and study visit by treatment group interaction as well as the continuous, fixed covariate of baseline EORTC QLQ-C30 score value and the randomization stratification factors of transfusion history (> 2 or ≤ 2 transfusions within 6 months of Screening) and screening Hgb (< 8.5 g/dL or ≥ 8.5 g/dL).

P-value is from difference of LSM from MMRM model. Interaction test p-value is from the same MMRM model with additional sex variable and sex by treatment interaction term.

Baseline is defined as the last non-missing value prior to the first dose of study drug.

EORTC QLQ-C30 is European Organization for Research and Treatment of Cancer Quality of Life Questionnaire-Core 30 Scale. Symptom scales include fatigue, nausea and vomiting, pain, dyspnoea, insomnia, appetite loss, constipation, diarrhoea, and financial difficulties.

Each subscale has a range of 0 - 100%. A high scale score represents a higher response level. Thus a high score for a functional scale represents a high level of functioning but a high score for a symptom scale represents a high level of symptomatology/problem.

LS=Least squares; CI=Confidence Interval; SEM=Standard error of the LS mean.

The difference of LS Means is calculated as the Danicopan mean minus Placebo mean.

Estimates are based on an MMRM that includes fixed, categorical effects of treatment group, study visit, and study visit by treatment group interaction as well as the continuous, fixed covariate of baseline EORTC QLQ-C30 score value and the randomization stratification factors of transfusion history (> 2 or ≤ 2 transfusions within 6 months of Screening) and screening Hgb (< 8.5 g/dL or ≥ 8.5 g/dL).

P-value is from difference of LSM from MMRM model. Interaction test p-value is from the same MMRM model with additional sex variable and sex by treatment interaction term.

Baseline is defined as the last non-missing value prior to the first dose of study drug.

Estimates are based on an MMRM that includes fixed, categorical effects of treatment group, study visit, and study visit by treatment group interaction as well as the continuous, fixed covariate of baseline EORTC QLQ-C30 score value and the randomization stratification factors of transfusion history (> 2 or ≤ 2 transfusions within 6 months of Screening) and screening Hgb (< 8.5 g/dL or ≥ 8.5 g/dL).

P-value is from difference of LSM from MMRM model. Interaction test p-value is from the same MMRM model with additional sex variable and sex by treatment interaction term.

Baseline is defined as the last non-missing value prior to the first dose of study drug.

EORTC QLQ-C30 is European Organization for Research and Treatment of Cancer Quality of Life Questionnaire-Core 30 Scale. Symptom scales include fatigue, nausea and vomiting, pain, dyspnoea, insomnia, appetite loss, constipation, diarrhoea, and financial difficulties.

Each subscale has a range of 0 - 100%. A high scale score represents a higher response level. Thus a high score for a functional scale represents a high level of functioning but a high score for a symptom scale represents a high level of symptomatology/problem.

LS=Least squares; CI=Confidence Interval; SEM=Standard error of the LS mean.

The difference of LS Means is calculated as the Danicopan mean minus Placebo mean.

Estimates are based on an MMRM that includes fixed, categorical effects of treatment group, study visit, and study visit by treatment group interaction as well as the continuous, fixed covariate of baseline EORTC QLQ-C30 score value and the randomization stratification factors of transfusion history (> 2 or ≤ 2 transfusions within 6 months of Screening) and screening Hgb (< 8.5 g/dL or ≥ 8.5 g/dL).

Table GERMANY.2.5.2.3
Change from Baseline in EORTC QLQ-C30 Scores Symptom Scales During 12-Week of Treatment Period 1
by Age at Informed Consent (< 65 and ≥ 65 Years)
Analysis Using a Mixed Model for Repeated Measures (MMRM)
Modified Randomized Set

Fatigue

Subgroup by treatment interaction p-value	0.6429
---	--------

EORTC QLQ-C30 is European Organization for Research and Treatment of Cancer Quality of Life Questionnaire-Core 30 Scale. Symptom scales include fatigue, nausea and vomiting, pain, dyspnoea, insomnia, appetite loss, constipation, diarrhoea, and financial difficulties.

Each subscale has a range of 0 - 100%. A high scale score represents a higher response level. Thus a high score for a functional scale represents a high level of functioning but a high score for a symptom scale represents a high level of symptomatology/problem.

LS=Least squares; CI=Confidence Interval; SEM=Standard error of the LS mean.

The difference of LS Means is calculated as the Danicopan mean minus Placebo mean.

Estimates are based on an MMRM that includes fixed, categorical effects of treatment group, study visit, and study visit by treatment group interaction as well as the continuous, fixed covariate of baseline EORTC QLQ-C30 score value and the randomization stratification factors of transfusion history (> 2 or ≤ 2 transfusions within 6 months of Screening) and screening Hgb (< 8.5 g/dL or ≥ 8.5 g/dL).

P-value is from difference of LSM from MMRM model. Interaction test p-value is from the same MMRM model with additional age variable and age by treatment interaction term.

Baseline is defined as the last non-missing value prior to the first dose of study drug.

---	--------

EORTC QLQ-C30 is European Organization for Research and Treatment of Cancer Quality of Life Questionnaire-Core 30 Scale. Symptom scales include fatigue, nausea and vomiting, pain, dyspnoea, insomnia, appetite loss, constipation, diarrhoea, and financial difficulties.

Each subscale has a range of 0 - 100%. A high scale score represents a higher response level. Thus a high score for a functional scale represents a high level of functioning but a high score for a symptom scale represents a high level of symptomatology/problem.

LS=Least squares; CI=Confidence Interval; SEM=Standard error of the LS mean.

The difference of LS Means is calculated as the Danicopan mean minus Placebo mean.

Estimates are based on an MMRM that includes fixed, categorical effects of treatment group, study visit, and study visit by treatment group interaction as well as the continuous, fixed covariate of baseline EORTC QLQ-C30 score value and the randomization stratification factors of transfusion history (> 2 or ≤ 2 transfusions within 6 months of Screening) and screening Hgb (< 8.5 g/dL or ≥ 8.5 g/dL).

P-value is from difference of LSM from MMRM model. Interaction test p-value is from the same MMRM model with additional age variable and age by treatment interaction term.

Baseline is defined as the last non-missing value prior to the first dose of study drug.

EORTC QLQ-C30 is European Organization for Research and Treatment of Cancer Quality of Life Questionnaire-Core 30 Scale. Symptom scales include fatigue, nausea and vomiting, pain, dyspnoea, insomnia, appetite loss, constipation, diarrhoea, and financial difficulties.

Each subscale has a range of 0 - 100%. A high scale score represents a higher response level. Thus a high score for a functional scale represents a high level of functioning but a high score for a symptom scale represents a high level of symptomatology/problem.

LS=Least squares; CI=Confidence Interval; SEM=Standard error of the LS mean.

The difference of LS Means is calculated as the Danicopan mean minus Placebo mean.

Estimates are based on an MMRM that includes fixed, categorical effects of treatment group, study visit, and study visit by treatment group interaction as well as the continuous, fixed covariate of baseline EORTC QLQ-C30 score value and the randomization stratification factors of transfusion history (> 2 or ≤ 2 transfusions within 6 months of Screening) and screening Hgb (< 8.5 g/dL or ≥ 8.5 g/dL).

P-value is from difference of LSM from MMRM model. Interaction test p-value is from the same MMRM model with additional age variable and age by treatment interaction term.

Baseline is defined as the last non-missing value prior to the first dose of study drug.

LS=Least squares; CI=Confidence Interval; SEM=Standard error of the LS mean.

The difference of LS Means is calculated as the Danicopan mean minus Placebo mean.

Estimates are based on an MMRM that includes fixed, categorical effects of treatment group, study visit, and study visit by treatment group interaction as well as the continuous, fixed covariate of baseline EORTC QLQ-C30 score value and the randomization stratification factors of transfusion history (> 2 or ≤ 2 transfusions within 6 months of Screening) and screening Hgb (< 8.5 g/dL or ≥ 8.5 g/dL).

P-value is from difference of LSM from MMRM model. Interaction test p-value is from the same MMRM model with additional region variable and region by treatment interaction term.

Baseline is defined as the last non-missing value prior to the first dose of study drug.

EORTC QLQ-C30 is European Organization for Research and Treatment of Cancer Quality of Life Questionnaire-Core 30 Scale. Symptom scales include fatigue, nausea and vomiting, pain, dyspnoea, insomnia, appetite loss, constipation, diarrhoea, and financial difficulties.

Each subscale has a range of 0 - 100%. A high scale score represents a higher response level. Thus a high score for a functional scale represents a high level of functioning but a high score for a symptom scale represents a high level of symptomatology/problem.

LS=Least squares; CI=Confidence Interval; SEM=Standard error of the LS mean.

The difference of LS Means is calculated as the Danicopan mean minus Placebo mean.

Estimates are based on an MMRM that includes fixed, categorical effects of treatment group, study visit, and study visit by treatment group interaction as well as the continuous, fixed covariate of baseline EORTC QLQ-C30 score value and the randomization stratification factors of transfusion history (> 2 or ≤ 2 transfusions within 6 months of Screening) and screening Hgb (< 8.5 g/dL or ≥ 8.5 g/dL).

P-value is from difference of LSM from MMRM model. Interaction test p-value is from the same MMRM model with additional region variable and region by treatment interaction term.

Baseline is defined as the last non-missing value prior to the first dose of study drug.

EORTC QLQ-C30 is European Organization for Research and Treatment of Cancer Quality of Life Questionnaire-Core 30 Scale. Symptom scales include fatigue, nausea and vomiting, pain, dyspnoea, insomnia, appetite loss, constipation, diarrhoea, and financial difficulties.

Each subscale has a range of 0 - 100%. A high scale score represents a higher response level. Thus a high score for a functional scale represents a high level of functioning but a high score for a symptom scale represents a high level of symptomatology/problem.

LS=Least squares; CI=Confidence Interval; SEM=Standard error of the LS mean.

The difference of LS Means is calculated as the Danicopan mean minus Placebo mean.

Estimates are based on an MMRM that includes fixed, categorical effects of treatment group, study visit, and study visit by treatment group interaction as well as the continuous, fixed covariate of baseline EORTC QLQ-C30 score value and the randomization stratification factors of transfusion history (> 2 or ≤ 2 transfusions within 6 months of Screening) and screening Hgb (< 8.5 g/dL or ≥ 8.5 g/dL).

P-value is from difference of LSM from MMRM model. Interaction test p-value is from the same MMRM model with additional region variable and region by treatment interaction term.

Baseline is defined as the last non-missing value prior to the first dose of study drug.

EORTC QLQ-C30 is European Organization for Research and Treatment of Cancer Quality of Life Questionnaire-Core 30 Scale. Symptom scales include fatigue, nausea and vomiting, pain, dyspnoea, insomnia, appetite loss, constipation, diarrhoea, and financial difficulties.

Each subscale has a range of 0 - 100%. A high scale score represents a higher response level. Thus a high score for a functional scale represents a high level of functioning but a high score for a symptom scale represents a high level of symptomatology/problem.

LS=Least squares; CI=Confidence Interval; SEM=Standard error of the LS mean.

The difference of LS Means is calculated as the Danicopan mean minus Placebo mean.

Estimates are based on an MMRM that includes fixed, categorical effects of treatment group, study visit, and study visit by treatment group interaction as well as the continuous, fixed covariate of baseline EORTC QLQ-C30 score value and the randomization stratification factors of transfusion history (> 2 or ≤ 2 transfusions within 6 months of Screening) and screening Hgb (< 8.5 g/dL or ≥ 8.5 g/dL).

P-value is from difference of LSM from MMRM model. Interaction test p-value is from the same MMRM model with additional region variable and region by treatment interaction term.

Baseline is defined as the last non-missing value prior to the first dose of study drug.

EORTC QLQ-C30 is European Organization for Research and Treatment of Cancer Quality of Life Questionnaire-Core 30 Scale. Symptom scales include fatigue, nausea and vomiting, pain, dyspnoea, insomnia, appetite loss, constipation, diarrhoea, and financial difficulties.

Each subscale has a range of 0 - 100%. A high scale score represents a higher response level. Thus a high score for a functional scale represents a high level of functioning but a high score for a symptom scale represents a high level of symptomatology/problem.

LS=Least squares; CI=Confidence Interval; SEM=Standard error of the LS mean.

The difference of LS Means is calculated as the Danicopan mean minus Placebo mean.

Estimates are based on an MMRM that includes fixed, categorical effects of treatment group, study visit, and study visit by treatment group interaction as well as the continuous, fixed covariate of baseline EORTC QLQ-C30 score value and the randomization stratification factors of screening Hgb (< 8.5 g/dL or ≥ 8.5 g/dL).

P-value is from difference of LSM from MMRM model. Interaction test p-value is from the same MMRM model with additional transfusion history variable and transfusion history by treatment interaction term.

Baseline is defined as the last non-missing value prior to the first dose of study drug.

EORTC QLQ-C30 is European Organization for Research and Treatment of Cancer Quality of Life Questionnaire-Core 30 Scale. Symptom scales include fatigue, nausea and vomiting, pain, dyspnoea, insomnia, appetite loss, constipation, diarrhoea, and financial difficulties.

Each subscale has a range of 0 - 100%. A high scale score represents a higher response level. Thus a high score for a functional scale represents a high level of functioning but a high score for a symptom scale represents a high level of symptomatology/problem.

LS=Least squares; CI=Confidence Interval; SEM=Standard error of the LS mean.

The difference of LS Means is calculated as the Danicopan mean minus Placebo mean.

Estimates are based on an MMRM that includes fixed, categorical effects of treatment group, study visit, and study visit by treatment group interaction as well as the continuous, fixed covariate of baseline EORTC QLQ-C30 score value and the randomization stratification factors of screening Hgb (< 8.5 g/dL or ≥ 8.5 g/dL).

P-value is from difference of LSM from MMRM model. Interaction test p-value is from the same MMRM model with additional transfusion history variable and transfusion history by treatment interaction term.

Baseline is defined as the last non-missing value prior to the first dose of study drug.

EORTC QLQ-C30 is European Organization for Research and Treatment of Cancer Quality of Life Questionnaire-Core 30 Scale. Symptom scales include fatigue, nausea and vomiting, pain, dyspnoea, insomnia, appetite loss, constipation, diarrhoea, and financial difficulties.

Each subscale has a range of 0 - 100%. A high scale score represents a higher response level. Thus a high score for a functional scale represents a high level of functioning but a high score for a symptom scale represents a high level of symptomatology/problem.

LS=Least squares; CI=Confidence Interval; SEM=Standard error of the LS mean.

The difference of LS Means is calculated as the Danicopan mean minus Placebo mean.

Estimates are based on an MMRM that includes fixed, categorical effects of treatment group, study visit, and study visit by treatment group interaction as well as the continuous, fixed covariate of baseline EORTC QLQ-C30 score value and the randomization stratification factors of screening Hgb (< 8.5 g/dL or ≥ 8.5 g/dL).

P-value is from difference of LSM from MMRM model. Interaction test p-value is from the same MMRM model with additional transfusion history variable and transfusion history by treatment interaction term.

Baseline is defined as the last non-missing value prior to the first dose of study drug.

EORTC QLQ-C30 is European Organization for Research and Treatment of Cancer Quality of Life Questionnaire-Core 30 Scale. Symptom scales include fatigue, nausea and vomiting, pain, dyspnoea, insomnia, appetite loss, constipation, diarrhoea, and financial difficulties.

Each subscale has a range of 0 - 100%. A high scale score represents a higher response level. Thus a high score for a functional scale represents a high level of functioning but a high score for a symptom scale represents a high level of symptomatology/problem.

LS=Least squares; CI=Confidence Interval; SEM=Standard error of the LS mean.

The difference of LS Means is calculated as the Danicopan mean minus Placebo mean.

Estimates are based on an MMRM that includes fixed, categorical effects of treatment group, study visit, and study visit by treatment group interaction as well as the continuous, fixed covariate of baseline EORTC QLQ-C30 score value and the randomization stratification factors of transfusion history (> 2 or ≤ 2 transfusions within 6 months of Screening).

P-value is from difference of LSM from MMRM model. Interaction test p-value is from the same MMRM model with additional screening Hgb level variable and screening Hgb level by treatment interaction term.

Baseline is defined as the last non-missing value prior to the first dose of study drug.

EORTC QLQ-C30 is European Organization for Research and Treatment of Cancer Quality of Life Questionnaire-Core 30 Scale. Symptom scales include fatigue, nausea and vomiting, pain, dyspnoea, insomnia, appetite loss, constipation, diarrhoea, and financial difficulties.

Each subscale has a range of 0 - 100%. A high scale score represents a higher response level. Thus a high score for a functional scale represents a high level of functioning but a high score for a symptom scale represents a high level of symptomatology/problem.

LS=Least squares; CI=Confidence Interval; SEM=Standard error of the LS mean.

The difference of LS Means is calculated as the Danicopan mean minus Placebo mean.

Estimates are based on an MMRM that includes fixed, categorical effects of treatment group, study visit, and study visit by treatment group interaction as well as the continuous, fixed covariate of baseline EORTC QLQ-C30 score value and the randomization stratification factors of transfusion history (> 2 or ≤ 2 transfusions within 6 months of Screening).

P-value is from difference of LSM from MMRM model. Interaction test p-value is from the same MMRM model with additional screening Hgb level variable and screening Hgb level by treatment interaction term.

Baseline is defined as the last non-missing value prior to the first dose of study drug.

EORTC QLQ-C30 is European Organization for Research and Treatment of Cancer Quality of Life Questionnaire-Core 30 Scale. Symptom scales include fatigue, nausea and vomiting, pain, dyspnoea, insomnia, appetite loss, constipation, diarrhoea, and financial difficulties.

Each subscale has a range of 0 - 100%. A high scale score represents a higher response level. Thus a high score for a functional scale represents a high level of functioning but a high score for a symptom scale represents a high level of symptomatology/problem.

LS=Least squares; CI=Confidence Interval; SEM=Standard error of the LS mean.

The difference of LS Means is calculated as the Danicopan mean minus Placebo mean.

Estimates are based on an MMRM that includes fixed, categorical effects of treatment group, study visit, and study visit by treatment group interaction as well as the continuous, fixed covariate of baseline EORTC QLQ-C30 score value and the randomization stratification factors of transfusion history (> 2 or ≤ 2 transfusions within 6 months of Screening).

P-value is from difference of LSM from MMRM model. Interaction test p-value is from the same MMRM model with additional screening Hgb level variable and screening Hgb level by treatment interaction term.

Baseline is defined as the last non-missing value prior to the first dose of study drug.

EORTC QLQ-C30 is European Organization for Research and Treatment of Cancer Quality of Life Questionnaire-Core 30 Scale. Symptom scales include fatigue, nausea and vomiting, pain, dyspnoea, insomnia, appetite loss, constipation, diarrhoea, and financial difficulties.

Each subscale has a range of 0 - 100%. A high scale score represents a higher response level. Thus a high score for a functional scale represents a high level of functioning but a high score for a symptom scale represents a high level of symptomatology/problem.

LS=Least squares; CI=Confidence Interval; SEM=Standard error of the LS mean.

The difference of LS Means is calculated as the Danicopan mean minus Placebo mean.

Estimates are based on an MMRM that includes fixed, categorical effects of treatment group, study visit, and study visit by treatment group interaction as well as the continuous, fixed covariate of baseline EORTC QLQ-C30 score value and the randomization stratification factors of transfusion history (> 2 or ≤ 2 transfusions within 6 months of Screening) and screening Hgb (< 8.5 g/dL or ≥ 8.5 g/dL).

P-value is from difference of LSM from MMRM model. Interaction test p-value is from the same MMRM model with additional background C5 inhibitor therapy variable and background C5 inhibitor therapy by treatment interaction term.

Baseline is defined as the last non-missing value prior to the first dose of study drug.

EORTC QLQ-C30 is European Organization for Research and Treatment of Cancer Quality of Life Questionnaire-Core 30 Scale. Symptom scales include fatigue, nausea and vomiting, pain, dyspnoea, insomnia, appetite loss, constipation, diarrhoea, and financial difficulties.

Each subscale has a range of 0 - 100%. A high scale score represents a higher response level. Thus a high score for a functional scale represents a high level of functioning but a high score for a symptom scale represents a high level of symptomatology/problem.

LS=Least squares; CI=Confidence Interval; SEM=Standard error of the LS mean.

The difference of LS Means is calculated as the Danicopan mean minus Placebo mean.

Estimates are based on an MMRM that includes fixed, categorical effects of treatment group, study visit, and study visit by treatment group interaction as well as the continuous, fixed covariate of baseline EORTC QLQ-C30 score value and the randomization stratification factors of transfusion history (> 2 or ≤ 2 transfusions within 6 months of Screening) and screening Hgb (< 8.5 g/dL or ≥ 8.5 g/dL).

P-value is from difference of LSM from MMRM model. Interaction test p-value is from the same MMRM model with additional background C5 inhibitor therapy variable and background C5 inhibitor therapy by treatment interaction term.

Baseline is defined as the last non-missing value prior to the first dose of study drug.

	95% CI for LS MEAN	(-3.47, 2.96)	(-2.61, 2.81)	(-4.84, 4.13)	

EORTC QLQ-C30 is European Organization for Research and Treatment of Cancer Quality of Life Questionnaire-Core 30 Scale. Symptom scales include fatigue, nausea and vomiting, pain, dyspnoea, insomnia, appetite loss, constipation, diarrhoea, and financial difficulties.

Each subscale has a range of 0 - 100%. A high scale score represents a higher response level. Thus a high score for a functional scale represents a high level of functioning but a high score for a symptom scale represents a high level of symptomatology/problem.

LS=Least squares; CI=Confidence Interval; SEM=Standard error of the LS mean.

The difference of LS Means is calculated as the Danicopan mean minus Placebo mean.

Estimates are based on an MMRM that includes fixed, categorical effects of treatment group, study visit, and study visit by treatment group interaction as well as the continuous, fixed covariate of baseline EORTC QLQ-C30 score value and the randomization stratification factors of transfusion history (> 2 or ≤ 2 transfusions within 6 months of Screening) and screening Hgb (< 8.5 g/dL or ≥ 8.5 g/dL).

P-value is from difference of LSM from MMRM model. Interaction test p-value is from the same MMRM model with additional Japanese patients variable and Japanese patients by treatment interaction term.

Baseline is defined as the last non-missing value prior to the first dose of study drug.

Estimates are based on an MMRM that includes fixed, categorical effects of treatment group, study visit, and study visit by treatment group interaction as well as the continuous, fixed covariate of baseline EORTC QLQ-C30 score value and the randomization stratification factors of transfusion history (> 2 or ≤ 2 transfusions within 6 months of Screening) and screening Hgb (< 8.5 g/dL or ≥ 8.5 g/dL).

P-value is from difference of LSM from MMRM model. Interaction test p-value is from the same MMRM model with additional Japanese patients variable and Japanese patients by treatment interaction term.

Baseline is defined as the last non-missing value prior to the first dose of study drug.

EORTC QLQ-C30 is European Organization for Research and Treatment of Cancer Quality of Life Questionnaire-Core 30 Scale. Symptom scales include fatigue, nausea and vomiting, pain, dyspnoea, insomnia, appetite loss, constipation, diarrhoea, and financial difficulties.

Each subscale has a range of 0 - 100%. A high scale score represents a higher response level. Thus a high score for a functional scale represents a high level of functioning but a high score for a symptom scale represents a high level of symptomatology/problem.

LS=Least squares; CI=Confidence Interval; SEM=Standard error of the LS mean.

The difference of LS Means is calculated as the Danicopan mean minus Placebo mean.

Estimates are based on an MMRM that includes fixed, categorical effects of treatment group, study visit, and study visit by treatment group interaction as well as the continuous, fixed covariate of baseline EORTC QLQ-C30 score value and the randomization stratification factors of transfusion history (> 2 or ≤ 2 transfusions within 6 months of Screening) and screening Hgb (< 8.5 g/dL or ≥ 8.5 g/dL).

P-value is from difference of LSM from MMRM model. Interaction test p-value is from the same MMRM model with additional Japanese patients variable and Japanese patients by treatment interaction term.

Baseline is defined as the last non-missing value prior to the first dose of study drug.

The difference of LS Means is calculated as the Danicopan mean minus Placebo mean.

Estimates are based on an MMRM that includes fixed, categorical effects of treatment group, study visit, and study visit by treatment group interaction as well as the continuous, fixed covariate of baseline EORTC QLQ-C30 score value and the randomization stratification factors of transfusion history (> 2 or ≤ 2 transfusions within 6 months of Screening) and screening Hgb (< 8.5 g/dL or ≥ 8.5 g/dL).

P-value is from difference of LSM from MMRM model. Interaction test p-value is from the same MMRM model with additional Japanese patients variable and Japanese patients by treatment interaction term.

Baseline is defined as the last non-missing value prior to the first dose of study drug.

EORTC QLQ-C30 is European Organization for Research and Treatment of Cancer Quality of Life Questionnaire-Core 30 Scale. Symptom scales include fatigue, nausea and vomiting, pain, dyspnoea, insomnia, appetite loss, constipation, diarrhoea, and financial difficulties.

Each subscale has a range of 0 - 100%. A high scale score represents a higher response level. Thus a high score for a functional scale represents a high level of functioning but a high score for a symptom scale represents a high level of symptomatology/problem.

LS=Least squares; CI=Confidence Interval; SEM=Standard error of the LS mean.

The difference of LS Means is calculated as the Danicopan mean minus Placebo mean.

Estimates are based on an MMRM that includes fixed, categorical effects of treatment group, study visit, and study visit by treatment group interaction as well as the continuous, fixed covariate of baseline EORTC QLQ-C30 score value and the randomization stratification factors of transfusion history (> 2 or ≤ 2 transfusions within 6 months of Screening) and screening Hgb (< 8.5 g/dL or ≥ 8.5 g/dL).

P-value is from difference of LSM from MMRM model. Interaction test p-value is from the same MMRM model with additional Japanese patients variable and Japanese patients by treatment interaction term.

Baseline is defined as the last non-missing value prior to the first dose of study drug.

EORTC QLQ-C30 is European Organization for Research and Treatment of Cancer Quality of Life Questionnaire-Core 30 Scale. Symptom scales include fatigue, nausea and vomiting, pain, dyspnoea, insomnia, appetite loss, constipation, diarrhoea, and financial difficulties.

Each subscale has a range of 0 - 100%. A high scale score represents a higher response level. Thus a high score for a functional scale represents a high level of functioning but a high score for a symptom scale represents a high level of symptomatology/problem.

LS=Least squares; CI=Confidence Interval; SEM=Standard error of the LS mean.

The difference of LS Means is calculated as the Danicopan mean minus Placebo mean.

Estimates are based on an MMRM that includes fixed, categorical effects of treatment group, study visit, and study visit by treatment group interaction as well as the continuous, fixed covariate of baseline EORTC QLQ-C30 score value and the randomization stratification factors of transfusion history (> 2 or ≤ 2 transfusions within 6 months of Screening) and screening Hgb (< 8.5 g/dL or ≥ 8.5 g/dL).

P-value is from difference of LSM from MMRM model. Interaction test p-value is from the same MMRM model with additional race variable and race by treatment interaction term.

Baseline is defined as the last non-missing value prior to the first dose of study drug.

LS=Least squares; CI=Confidence Interval; SEM=Standard error of the LS mean.

The difference of LS Means is calculated as the Danicopan mean minus Placebo mean.

Estimates are based on an MMRM that includes fixed, categorical effects of treatment group, study visit, and study visit by treatment group interaction as well as the continuous, fixed covariate of baseline EORTC QLQ-C30 score value and the randomization stratification factors of transfusion history (> 2 or ≤ 2 transfusions within 6 months of Screening) and screening Hgb (< 8.5 g/dL or ≥ 8.5 g/dL).

P-value is from difference of LSM from MMRM model. Interaction test p-value is from the same MMRM model with additional race variable and race by treatment interaction term.

Baseline is defined as the last non-missing value prior to the first dose of study drug.

Week 12	LS Mean (SEM)	2.55 (5.428)	2.75 (8.907)	-0.19 (10.415)	0.9854
	95% CI for LS MEAN	(-8.60, 13.71)	(-15.61, 21.10)	(-21.65, 21.26)	

EORTC QLQ-C30 is European Organization for Research and Treatment of Cancer Quality of Life Questionnaire-Core 30 Scale. Symptom scales include fatigue, nausea and vomiting, pain, dyspnoea, insomnia, appetite loss, constipation, diarrhoea, and financial difficulties.

Each subscale has a range of 0 - 100%. A high scale score represents a higher response level. Thus a high score for a functional scale represents a high level of functioning but a high score for a symptom scale represents a high level of symptomatology/problem.

LS=Least squares; CI=Confidence Interval; SEM=Standard error of the LS mean.

The difference of LS Means is calculated as the Danicopan mean minus Placebo mean.

Estimates are based on an MMRM that includes fixed, categorical effects of treatment group, study visit, and study visit by treatment group interaction as well as the continuous, fixed covariate of baseline EORTC QLQ-C30 score value and the randomization stratification factors of transfusion history (> 2 or ≤ 2 transfusions within 6 months of Screening) and screening Hgb (< 8.5 g/dL or ≥ 8.5 g/dL).

P-value is from difference of LSM from MMRM model. Interaction test p-value is from the same MMRM model with additional race variable and race by treatment interaction term.

Baseline is defined as the last non-missing value prior to the first dose of study drug.

EORTC QLQ-C30 is European Organization for Research and Treatment of Cancer Quality of Life Questionnaire-Core 30 Scale. Symptom scales include fatigue, nausea and vomiting, pain, dyspnoea, insomnia, appetite loss, constipation, diarrhoea, and financial difficulties.

Each subscale has a range of 0 - 100%. A high scale score represents a higher response level. Thus a high score for a functional scale represents a high level of functioning but a high score for a symptom scale represents a high level of symptomatology/problem.

LS=Least squares; CI=Confidence Interval; SEM=Standard error of the LS mean.

The difference of LS Means is calculated as the Danicopan mean minus Placebo mean.

Estimates are based on an MMRM that includes fixed, categorical effects of treatment group, study visit, and study visit by treatment group interaction as well as the continuous, fixed covariate of baseline EORTC QLQ-C30 score value and the randomization stratification factors of transfusion history (> 2 or ≤ 2 transfusions within 6 months of Screening) and screening Hgb (< 8.5 g/dL or ≥ 8.5 g/dL).

P-value is from difference of LSM from MMRM model. Interaction test p-value is from the same MMRM model with additional race variable and race by treatment interaction term.

Baseline is defined as the last non-missing value prior to the first dose of study drug.

Min, Max	30, 100	-24, 55	30, 90	-50, 81		

EQ-5D-3L is Three-level EuroQoL 5 dimensions.

Visual Analogue Scale (VAS) Score is reported.

Patients were randomized to Danicopan or Placebo for 12 weeks as Treatment Period 1. At Week 12, patients randomized to Placebo were switched to Danicopan for an additional 12 weeks as Treatment Period 2 and patients randomized to Danicopan continued on Danicopan during Treatment Period 2. At the end of the Treatment Period 2 (Week 24), patients entered the Long Term Extension (LTE) Period and continue to receive Danicopan.

D->D: Danicopan at Treatment Period 1 and Danicopan at Treatment Period 2; P->D: Placebo at Treatment Period 1 and Danicopan at Treatment Period 2.

Change from baseline is summarized only for patients who have data at baseline and the specified time point.

Baseline is defined as the last non-missing value prior to the first dose of study drug.

Actual values for Total group is summarized only for baseline and the time points from Long Term Extension (LTE).

EQ-5D-3L is Three-level EuroQoL 5 dimensions.

Visual Analogue Scale (VAS) Score is reported.

Patients were randomized to Danicopan or Placebo for 12 weeks as Treatment Period 1. At Week 12, patients randomized to Placebo were switched to Danicopan for an additional 12 weeks as Treatment Period 2 and patients randomized to Danicopan continued on Danicopan during Treatment Period 2. At the end of the Treatment Period 2 (Week 24), patients entered the Long Term Extension (LTE) Period and continue to receive Danicopan.

D->D: Danicopan at Treatment Period 1 and Danicopan at Treatment Period 2; P->D: Placebo at Treatment Period 1 and Danicopan at Treatment Period 2.

Change from baseline is summarized only for patients who have data at baseline and the specified time point.

Baseline is defined as the last non-missing value prior to the first dose of study drug.

Actual values for Total group is summarized only for baseline and the time points from Long Term Extension (LTE).

Change from Baseline in EQ-5D-3L Scores During 12-Week of Treatment Period 1
Analysis Using a Mixed Model for Repeated Measures (MMRM)
Modified Randomized Set

Visit	Statistics	Danicopan (N = 57)	Placebo (N = 24)	Difference (Danicopan-Placebo)	P-value
Week 2	LS Mean (SEM)	8.86 (2.109)	4.30 (3.278)	4.56 (3.805)	0.2347
	95% CI for LS MEAN	(4.66, 13.06)	(-2.22, 10.82)	(-3.02, 12.13)	
Week 4	LS Mean (SEM)	10.40 (2.203)	3.10 (3.361)	7.30 (3.934)	0.0677
	95% CI for LS MEAN	(6.01, 14.78)	(-3.59, 9.80)	(-0.54, 15.14)	
Week 8	LS Mean (SEM)	11.05 (2.473)	6.40 (3.808)	4.65 (4.465)	0.3012
	95% CI for LS MEAN	(6.13, 15.98)	(-1.18, 13.99)	(-4.25, 13.55)	
Week 12	LS Mean (SEM)	13.16 (2.139)	5.73 (3.216)	7.44 (3.775)	0.0526
	95% CI for LS MEAN	(8.90, 17.42)	(-0.68, 12.13)	(-0.09, 14.96)	

EQ-5D-3L is Three-level EuroQoL 5 dimensions.

Visual Analogue Scale (VAS) Score is reported.

LS=Least squares; CI=Confidence Interval; SEM=Standard error of the LS mean.

The difference of LS Means is calculated as the Danicopan mean minus Placebo mean.

Estimates are based on an MMRM that includes fixed, categorical effects of treatment group, study visit, and study visit by treatment group interaction as well as the continuous, fixed covariate of baseline EQ-5D-3L score value and the randomization stratification factors of transfusion history (> 2 or ≤ 2 transfusions within 6 months of Screening) and screening Hgb (< 8.5 g/dL or ≥ 8.5 g/dL). An Unstructured covariance structure was used.

P-value is from difference of LSM from MMRM model.

Baseline is defined as the last non-missing value prior to the first dose of study drug.

EQ-5D-3L is Three-level EuroQoL 5 dimensions.

Visual Analogue Scale (VAS) Score is reported.

Patients were randomized to Danicopan or Placebo for 12 weeks as Treatment Period 1. At Week 12, patients randomized to Placebo were switched to Danicopan for an additional 12 weeks as Treatment Period 2 and patients randomized to Danicopan continued on Danicopan during Treatment Period 2. At the end of the Treatment Period 2 (Week 24), patients entered the Long Term Extension (LTE) Period and continue to receive Danicopan.

D->D: Danicopan at Treatment Period 1 and Danicopan at Treatment Period 2; P->D: Placebo at Treatment Period 1 and Danicopan at Treatment Period 2.

Change from baseline is summarized only for patients who have data at baseline and the specified time point.

Baseline is defined as the last non-missing value prior to the first dose of study drug.

Actual values for Total group is summarized only for baseline and the time points from Long Term Extension (LTE).

Change from baseline is summarized only for patients who have data at baseline and the specified time point.

Baseline is defined as the last non-missing value prior to the first dose of study drug.

Actual values for Total group is summarized only for baseline and the time points from Long Term Extension (LTE).

EQ-5D-3L is Three-level EuroQoL 5 dimensions.
Visual Analogue Scale (VAS) Score is reported.

Patients were randomized to Danicopan or Placebo for 12 weeks as Treatment Period 1. At Week 12, patients randomized to Placebo were switched to Danicopan for an additional 12 weeks as Treatment Period 2 and patients randomized to Danicopan continued on Danicopan during Treatment Period 2. At the end of the Treatment Period 2 (Week 24), patients entered the Long Term Extension (LTE) Period and continue to receive Danicopan.

D->D: Danicopan at Treatment Period 1 and Danicopan at Treatment Period 2; P->D: Placebo at Treatment Period 1 and Danicopan at Treatment Period 2.
Change from baseline is summarized only for patients who have data at baseline and the specified time point.

Baseline is defined as the last non-missing value prior to the first dose of study drug.

Actual values for Total group is summarized only for baseline and the time points from Long Term Extension (LTE).

EQ-5D-3L is Three-level EuroQoL 5 dimensions.

Visual Analogue Scale (VAS) Score is reported.

Patients were randomized to Danicopan or Placebo for 12 weeks as Treatment Period 1. At Week 12, patients randomized to Placebo were switched to Danicopan for an additional 12 weeks as Treatment Period 2 and patients randomized to Danicopan continued on Danicopan during Treatment Period 2. At the end of the Treatment Period 2 (Week 24), patients entered the Long Term Extension (LTE) Period and continue to receive Danicopan.

D->D: Danicopan at Treatment Period 1 and Danicopan at Treatment Period 2; P->D: Placebo at Treatment Period 1 and Danicopan at Treatment Period 2.

Change from baseline is summarized only for patients who have data at baseline and the specified time point.

Baseline is defined as the last non-missing value prior to the first dose of study drug.

Actual values for Total group is summarized only for baseline and the time points from Long Term Extension (LTE).

Min, Max	30, 96	-13, 68	60, 91	0, 82		

EQ-5D-3L is Three-level EuroQoL 5 dimensions.

Visual Analogue Scale (VAS) Score is reported.

Patients were randomized to Danicopan or Placebo for 12 weeks as Treatment Period 1. At Week 12, patients randomized to Placebo were switched to Danicopan for an additional 12 weeks as Treatment Period 2 and patients randomized to Danicopan continued on Danicopan during Treatment Period 2. At the end of the Treatment Period 2 (Week 24), patients entered the Long Term Extension (LTE) Period and continue to receive Danicopan.

D->D: Danicopan at Treatment Period 1 and Danicopan at Treatment Period 2; P->D: Placebo at Treatment Period 1 and Danicopan at Treatment Period 2.

Change from baseline is summarized only for patients who have data at baseline and the specified time point.

Baseline is defined as the last non-missing value prior to the first dose of study drug.

Actual values for Total group is summarized only for baseline and the time points from Long Term Extension (LTE).

Patients were randomized to Danicopan or Placebo for 12 weeks as Treatment Period 1. At Week 12, patients randomized to Placebo were switched to Danicopan for an additional 12 weeks as Treatment Period 2 and patients randomized to Danicopan continued on Danicopan during Treatment Period 2. At the end of the Treatment Period 2 (Week 24), patients entered the Long Term Extension (LTE) Period and continue to receive Danicopan.

D->D: Danicopan at Treatment Period 1 and Danicopan at Treatment Period 2; P->D: Placebo at Treatment Period 1 and Danicopan at Treatment Period 2.

Change from baseline is summarized only for patients who have data at baseline and the specified time point.

Baseline is defined as the last non-missing value prior to the first dose of study drug.

Actual values for Total group is summarized only for baseline and the time points from Long Term Extension (LTE).

Min, Max	95, 95	15, 15	65, 65	-10, -10	65, 95	-10, 15

EQ-5D-3L is Three-level EuroQoL 5 dimensions.

Visual Analogue Scale (VAS) Score is reported.

Patients were randomized to Danicopan or Placebo for 12 weeks as Treatment Period 1. At Week 12, patients randomized to Placebo were switched to Danicopan for an additional 12 weeks as Treatment Period 2 and patients randomized to Danicopan continued on Danicopan during Treatment Period 2. At the end of the Treatment Period 2 (Week 24), patients entered the Long Term Extension (LTE) Period and continue to receive Danicopan.

D->D: Danicopan at Treatment Period 1 and Danicopan at Treatment Period 2; P->D: Placebo at Treatment Period 1 and Danicopan at Treatment Period 2.

Change from baseline is summarized only for patients who have data at baseline and the specified time point.

Baseline is defined as the last non-missing value prior to the first dose of study drug.

Actual values for Total group is summarized only for baseline and the time points from Long Term Extension (LTE).

Visual Analogue Scale (VAS) Score is reported.

Patients were randomized to Danicopan or Placebo for 12 weeks as Treatment Period 1. At Week 12, patients randomized to Placebo were switched to Danicopan for an additional 12 weeks as Treatment Period 2 and patients randomized to Danicopan continued on Danicopan during Treatment Period 2. At the end of the Treatment Period 2 (Week 24), patients entered the Long Term Extension (LTE) Period and continue to receive Danicopan.

D->D: Danicopan at Treatment Period 1 and Danicopan at Treatment Period 2; P->D: Placebo at Treatment Period 1 and Danicopan at Treatment Period 2.

Change from baseline is summarized only for patients who have data at baseline and the specified time point.

Baseline is defined as the last non-missing value prior to the first dose of study drug.

Actual values for Total group is summarized only for baseline and the time points from Long Term Extension (LTE).

EQ-5D-3L is Three-level EuroQoL 5 dimensions.

Visual Analogue Scale (VAS) Score is reported.

Patients were randomized to Danicopan or Placebo for 12 weeks as Treatment Period 1. At Week 12, patients randomized to Placebo were switched to Danicopan for an additional 12 weeks as Treatment Period 2 and patients randomized to Danicopan continued on Danicopan during Treatment Period 2. At the end of the Treatment Period 2 (Week 24), patients entered the Long Term Extension (LTE) Period and continue to receive Danicopan.

D->D: Danicopan at Treatment Period 1 and Danicopan at Treatment Period 2; P->D: Placebo at Treatment Period 1 and Danicopan at Treatment Period 2.

Change from baseline is summarized only for patients who have data at baseline and the specified time point.

Baseline is defined as the last non-missing value prior to the first dose of study drug.

Actual values for Total group is summarized only for baseline and the time points from Long Term Extension (LTE).

Min, Max	50, 90	-4, 58	40, 80	0, 10		

EQ-5D-3L is Three-level EuroQoL 5 dimensions.
Visual Analogue Scale (VAS) Score is reported.

Patients were randomized to Danicopan or Placebo for 12 weeks as Treatment Period 1. At Week 12, patients randomized to Placebo were switched to Danicopan for an additional 12 weeks as Treatment Period 2 and patients randomized to Danicopan continued on Danicopan during Treatment Period 2. At the end of the Treatment Period 2 (Week 24), patients entered the Long Term Extension (LTE) Period and continue to receive Danicopan.

D->D: Danicopan at Treatment Period 1 and Danicopan at Treatment Period 2; P->D: Placebo at Treatment Period 1 and Danicopan at Treatment Period 2. Change from baseline is summarized only for patients who have data at baseline and the specified time point.

Baseline is defined as the last non-missing value prior to the first dose of study drug.

Actual values for Total group is summarized only for baseline and the time points from Long Term Extension (LTE).

EQ-5D-3L is Three-level EuroQoL 5 dimensions.

Visual Analogue Scale (VAS) Score is reported.

LS=Least squares; CI=Confidence Interval; SEM=Standard error of the LS mean.

The difference of LS Means is calculated as the Danicopan mean minus Placebo mean.

Estimates are based on an MMRM that includes fixed, categorical effects of treatment group, study visit, and study visit by treatment group interaction as well as the continuous, fixed covariate of baseline EQ-5D-3L score value and the randomization stratification factors of transfusion history (> 2 or ≤ 2 transfusions within 6 months of Screening) and screening Hgb (< 8.5 g/dL or ≥ 8.5 g/dL).

P-value is from difference of LSM from MMRM model. Interaction test p-value is from the same MMRM model with additional sex variable and sex by treatment interaction term.

Baseline is defined as the last non-missing value prior to the first dose of study drug.

---	--------

EQ-5D-3L is Three-level EuroQoL 5 dimensions.

Visual Analogue Scale (VAS) Score is reported.

LS=Least squares; CI=Confidence Interval; SEM=Standard error of the LS mean.

The difference of LS Means is calculated as the Danicopan mean minus Placebo mean.

Estimates are based on an MMRM that includes fixed, categorical effects of treatment group, study visit, and study visit by treatment group interaction as well as the continuous, fixed covariate of baseline EQ-5D-3L score value and the randomization stratification factors of transfusion history (> 2 or ≤ 2 transfusions within 6 months of Screening) and screening Hgb (< 8.5 g/dL or ≥ 8.5 g/dL).

P-value is from difference of LSM from MMRM model. Interaction test p-value is from the same MMRM model with additional age variable and age by treatment interaction term.

Baseline is defined as the last non-missing value prior to the first dose of study drug.

The difference of LS Means is calculated as the Danicopan mean minus Placebo mean.

Estimates are based on an MMRM that includes fixed, categorical effects of treatment group, study visit, and study visit by treatment group interaction as well as the continuous, fixed covariate of baseline EQ-5D-3L score value and the randomization stratification factors of transfusion history (> 2 or ≤ 2 transfusions within 6 months of Screening) and screening Hgb (< 8.5 g/dL or ≥ 8.5 g/dL).

P-value is from difference of LSM from MMRM model. Interaction test p-value is from the same MMRM model with additional background C5 inhibitor therapy variable and background C5 inhibitor therapy by treatment interaction term.

Baseline is defined as the last non-missing value prior to the first dose of study drug.

Week 8	Expected Patients Per Visit	57	25
	Patients Per Visit	57	25
	Patients Who Completed Question, n (%)	45 (78.9)	18 (72.0)
Week 12	Expected Patients Per Visit	55	25
	Patients Per Visit	54	25
	Patients Who Completed Question, n (%)	51 (92.7)	24 (96.0)
Week 24	Expected Patients Per Visit	55	24
	Patients Per Visit	55	24
	Patients Who Completed Question, n (%)	46 (83.6)	22 (91.7)

Percentages are based on the total number of expected patients in each group.

WPAI:ANS is Work Productivity and Activity Impairment Questionnaire: Anemic Symptoms V2.0.

All the Questionnaires are collected in past 7 days. Only how much anemic symptoms affect ability on regular daily activities, other than work was reported. For how much anemic symptoms affect ability on regular daily activities, other than work, the data were collected as 10 level from 0 which indicate Anemic symptoms had no effect on daily activities to 10 which dicate Anemic symptoms completely prevented patients from doing daily activites.

D->D: Danicopan at Treatment Period 1 and Danicopan at Treatment Period 2; P->D: Placebo at Treatment Period 1 and Danicopan at Treatment Period 2.

Table GERMANY.2.5.5.10
WPAI:ANS Compliance Rate During Treatment Period 1 and Period 2 and Long Term Extension
Modified Randomized Set

Visit	Statistics	D->D (N=57)	P->D (N=26)
Week 40	Expected Patients Per Visit	46	22
	Patients Per Visit	46	22
	Patients Who Completed Question, n (%)	41 (89.1)	18 (81.8)
Week 56	Expected Patients Per Visit	36	18
	Patients Per Visit	36	18
	Patients Who Completed Question, n (%)	31 (86.1)	14 (77.8)
Week 72	Expected Patients Per Visit	21	12
	Patients Per Visit	21	12
	Patients Who Completed Question, n (%)	18 (85.7)	11 (91.7)
Week 88	Expected Patients Per Visit	14	8
	Patients Per Visit	14	8
	Patients Who Completed Question, n (%)	13 (92.9)	6 (75.0)
Week 104	Expected Patients Per Visit	4	2
	Patients Per Visit	4	2
	Patients Who Completed Question, n (%)	3 (75.0)	2 (100)

Percentages are based on the total number of expected patients in each group.

WPAI:ANS is Work Productivity and Activity Impairment Questionnaire: Anemic Symptoms V2.0.

All the Questionnaires are collected in past 7 days. Only how much anemic symptoms affect ability on regular daily activities, other than work was reported. For how much anemic symptoms affect ability on regular daily activities, other than work, the data were collected as 10 level from 0 which indicate Anemic symptoms had no effect on daily activities to 10 which dicate Anemic symptoms completely prevented patients from doing daily activites.

D->D: Danicopan at Treatment Period 1 and Danicopan at Treatment Period 2; P->D: Placebo at Treatment Period 1 and Danicopan at Treatment Period 2.

Change from Baseline in WPAI:ANS During 12-Week of Treatment Period 1
Analysis Using a Mixed Model for Repeated Measures (MMRM)
Modified Randomized Set

Visit	Statistics	Danicopan (N = 55)	Placebo (N = 24)	Difference (Danicopan-Placebo)	P-value
Week 2	LS Mean (SEM)	-0.94 (0.275)	-0.22 (0.419)	-0.72 (0.494)	0.1515
	95% CI for LS MEAN	(-1.49, -0.39)	(-1.06, 0.61)	(-1.70, 0.27)	
Week 4	LS Mean (SEM)	-1.38 (0.295)	-0.53 (0.446)	-0.85 (0.529)	0.1115
	95% CI for LS MEAN	(-1.97, -0.79)	(-1.42, 0.36)	(-1.91, 0.20)	
Week 8	LS Mean (SEM)	-1.60 (0.356)	-0.11 (0.545)	-1.49 (0.646)	0.0241
	95% CI for LS MEAN	(-2.31, -0.89)	(-1.20, 0.98)	(-2.78, -0.20)	
Week 12	LS Mean (SEM)	-1.79 (0.343)	-0.40 (0.500)	-1.39 (0.602)	0.0238
	95% CI for LS MEAN	(-2.48, -1.11)	(-1.40, 0.59)	(-2.59, -0.19)	

LS=Least squares; CI=Confidence Interval; SEM=Standard error of the LS mean.

The difference of LS Means is calculated as the Danicopan mean minus Placebo mean.

Estimates are based on an MMRM that includes fixed, categorical effects of treatment group, study visit, and study visit by treatment group interaction as well as the continuous, fixed covariate of baseline WPAI:ANS value and the randomization stratification factors of transfusion history (> 2 or ≤ 2 transfusions within 6 months of Screening) and screening Hgb (< 8.5 g/dL or ≥ 8.5 g/dL). An Unstructured covariance matrix was used.

WPAI:ANS is Work Productivity and Activity Impairment Questionnaire: Anemic Symptoms V2.0. All the Questionnaires are collected in past 7 days. Only how much anemic symptoms affect ability on regular daily activities, other than work was reported.

For how much anemic symptoms affect ability on regular daily activities, other than work, the data were collected as 10 level from 0 which indicate Anemic symptoms had no effect on daily activities to 10 which dicate Anemic symptoms completely prevented patients from doing daily activites.

P-value is from difference of LSM from MMRM model.

Baseline is defined as the last non-missing value prior to the first dose of study drug.

At the end of the Treatment Period 2 (Week 24), patients entered the Long Term Extension (LTE) Period and continue to receive Danicopan.
D->D: Danicopan at Treatment Period 1 and Danicopan at Treatment Period 2; P->D: Placebo at Treatment Period 1 and Danicopan at Treatment Period 2.
Change from baseline is summarized only for patients who have data at baseline and the specified time point. Actual values for Total group is summarized only for baseline and the time points from Long Term Extension (LTE).
Baseline is defined as the last non-missing value prior to the first dose of study drug.

WPAI:ANS is Work Productivity and Activity Impairment Questionnaire: Anemic Symptoms V2.0.

All the Questionnaires are collected in past 7 days. Only how much anemic symptoms affect ability on regular daily activities, other than work was reported. For how much anemic symptoms affect ability on regular daily activities, other than work, the data were collected as 10 level from 0 which indicate Anemic symptoms had no effect on daily activities to 10 which dicate Anemic symptoms completely prevented patients from doing daily activites.

Patients were randomized to Danicopan or Placebo for 12 weeks as Treatment Period 1. At Week 12, patients randomized to Placebo were switched to Danicopan for an additional 12 weeks as Treatment Period 2 and patients randomized to Danicopan continued on Danicopan during Treatment Period 2. At the end of the Treatment Period 2 (Week 24), patients entered the Long Term Extension (LTE) Period and continue to receive Danicopan.

D->D: Danicopan at Treatment Period 1 and Danicopan at Treatment Period 2; P->D: Placebo at Treatment Period 1 and Danicopan at Treatment Period 2.

Change from baseline is summarized only for patients who have data at baseline and the specified time point. Actual values for Total group is summarized only for baseline and the time points from Long Term Extension (LTE).

Baseline is defined as the last non-missing value prior to the first dose of study drug.

WPAI:ANS is Work Productivity and Activity Impairment Questionnaire: Anemic Symptoms V2.0.
All the Questionnaires are collected in past 7 days. Only how much anemic symptoms affect ability on regular daily activities, other than work was reported.
For how much anemic symptoms affect ability on regular daily activities, other than work, the data were collected as 10 level from 0 which indicate Anemic symptoms had no effect on daily activities to 10 which dicate Anemic symptoms completely prevented patients from doing daily activities.
Patients were randomized to Danicopan or Placebo for 12 weeks as Treatment Period 1. At Week 12, patients randomized to Placebo were switched to Danicopan for an additional 12 weeks as Treatment Period 2 and patients randomized to Danicopan continued on Danicopan during Treatment Period 2. At the end of the Treatment Period 2 (Week 24), patients entered the Long Term Extension (LTE) Period and continue to receive Danicopan.
D->D: Danicopan at Treatment Period 1 and Danicopan at Treatment Period 2; P->D: Placebo at Treatment Period 1 and Danicopan at Treatment Period 2.
Change from baseline is summarized only for patients who have data at baseline and the specified time point. Actual values for Total group is summarized only for baseline and the time points from Long Term Extension (LTE).
Baseline is defined as the last non-missing value prior to the first dose of study drug.

WPAI:ANS is Work Productivity and Activity Impairment Questionnaire: Anemic Symptoms V2.0.
All the Questionnaires are collected in past 7 days. Only how much anemic symptoms affect ability on regular daily activities, other than work was reported. For how much anemic symptoms affect ability on regular daily activities, other than work, the data were collected as 10 level from 0 which indicate Anemic symptoms had no effect on daily activities to 10 which indicate Anemic symptoms completely prevented patients from doing daily activities.
Patients were randomized to Danicopan or Placebo for 12 weeks as Treatment Period 1. At Week 12, patients randomized to Placebo were switched to Danicopan for an additional 12 weeks as Treatment Period 2 and patients randomized to Danicopan continued on Danicopan during Treatment Period 2. At the end of the Treatment Period 2 (Week 24), patients entered the Long Term Extension (LTE) Period and continue to receive Danicopan.
D->D: Danicopan at Treatment Period 1 and Danicopan at Treatment Period 2; P->D: Placebo at Treatment Period 1 and Danicopan at Treatment Period 2.
Change from baseline is summarized only for patients who have data at baseline and the specified time point. Actual values for Total group is summarized only for baseline and the time points from Long Term Extension (LTE).
Baseline is defined as the last non-missing value prior to the first dose of study drug.

WPAI:ANS is Work Productivity and Activity Impairment Questionnaire: Anemic Symptoms V2.0.

All the Questionnaires are collected in past 7 days. Only how much anemic symptoms affect ability on regular daily activities, other than work was reported. For how much anemic symptoms affect ability on regular daily activities, other than work, the data were collected as 10 level from 0 which indicate Anemic symptoms had no effect on daily activities to 10 which indicate Anemic symptoms completely prevented patients from doing daily activities.

Patients were randomized to Danicopan or Placebo for 12 weeks as Treatment Period 1. At Week 12, patients randomized to Placebo were switched to Danicopan for an additional 12 weeks as Treatment Period 2 and patients randomized to Danicopan continued on Danicopan during Treatment Period 2. At the end of the Treatment Period 2 (Week 24), patients entered the Long Term Extension (LTE) Period and continue to receive Danicopan.

D->D: Danicopan at Treatment Period 1 and Danicopan at Treatment Period 2; P->D: Placebo at Treatment Period 1 and Danicopan at Treatment Period 2.

Change from baseline is summarized only for patients who have data at baseline and the specified time point. Actual values for Total group is summarized only for baseline and the time points from Long Term Extension (LTE).

Baseline is defined as the last non-missing value prior to the first dose of study drug.

WPAI:ANS is Work Productivity and Activity Impairment Questionnaire: Anemic Symptoms V2.0.
All the Questionnaires are collected in past 7 days. Only how much anemic symptoms affect ability on regular daily activities, other than work was reported. For how much anemic symptoms affect ability on regular daily activities, other than work, the data were collected as 10 level from 0 which indicate Anemic symptoms had no effect on daily activities to 10 which indicate Anemic symptoms completely prevented patients from doing daily activities.
Patients were randomized to Danicopan or Placebo for 12 weeks as Treatment Period 1. At Week 12, patients randomized to Placebo were switched to Danicopan for an additional 12 weeks as Treatment Period 2 and patients randomized to Danicopan continued on Danicopan during Treatment Period 2. At the end of the Treatment Period 2 (Week 24), patients entered the Long Term Extension (LTE) Period and continue to receive Danicopan.
D->D: Danicopan at Treatment Period 1 and Danicopan at Treatment Period 2; P->D: Placebo at Treatment Period 1 and Danicopan at Treatment Period 2.
Change from baseline is summarized only for patients who have data at baseline and the specified time point. Actual values for Total group is summarized only for baseline and the time points from Long Term Extension (LTE).
Baseline is defined as the last non-missing value prior to the first dose of study drug.

WPAI:ANS is Work Productivity and Activity Impairment Questionnaire: Anemic Symptoms V2.0.

All the Questionnaires are collected in past 7 days. Only how much anemic symptoms affect ability on regular daily activities, other than work was reported. For how much anemic symptoms affect ability on regular daily activities, other than work, the data were collected as 10 level from 0 which indicate Anemic symptoms had no effect on daily activities to 10 which dicate Anemic symptoms completely prevented patients from doing daily activities.

Patients were randomized to Danicopan or Placebo for 12 weeks as Treatment Period 1. At Week 12, patients randomized to Placebo were switched to Danicopan for an additional 12 weeks as Treatment Period 2 and patients randomized to Danicopan continued on Danicopan during Treatment Period 2. At the end of the Treatment Period 2 (Week 24), patients entered the Long Term Extension (LTE) Period and continue to receive Danicopan.

D->D: Danicopan at Treatment Period 1 and Danicopan at Treatment Period 2; P->D: Placebo at Treatment Period 1 and Danicopan at Treatment Period 2.

Change from baseline is summarized only for patients who have data at baseline and the specified time point. Actual values for Total group is summarized only for baseline and the time points from Long Term Extension (LTE).

Baseline is defined as the last non-missing value prior to the first dose of study drug.

WPAI:ANS is Work Productivity and Activity Impairment Questionnaire: Anemic Symptoms V2.0.
All the Questionnaires are collected in past 7 days. Only how much anemic symptoms affect ability on regular daily activities, other than work was reported. For how much anemic symptoms affect ability on regular daily activities, other than work, the data were collected as 10 level from 0 which indicate Anemic symptoms had no effect on daily activities to 10 which dicate Anemic symptoms completely prevented patients from doing daily activities.
Patients were randomized to Danicopan or Placebo for 12 weeks as Treatment Period 1. At Week 12, patients randomized to Placebo were switched to Danicopan for an additional 12 weeks as Treatment Period 2 and patients randomized to Danicopan continued on Danicopan during Treatment Period 2. At the end of the Treatment Period 2 (Week 24), patients entered the Long Term Extension (LTE) Period and continue to receive Danicopan.
D->D: Danicopan at Treatment Period 1 and Danicopan at Treatment Period 2; P->D: Placebo at Treatment Period 1 and Danicopan at Treatment Period 2.
Change from baseline is summarized only for patients who have data at baseline and the specified time point. Actual values for Total group is summarized only for baseline and the time points from Long Term Extension (LTE).
Baseline is defined as the last non-missing value prior to the first dose of study drug.

	95% CI for LS MEAN	(-1.87, 1.61)	(-3.69, 1.88)	(-2.50, 4.05)	
Week 12	LS Mean (SEM)	-0.91 (0.737)	0.72 (1.062)	-1.63 (1.298)	0.2281
	95% CI for LS MEAN	(-2.48, 0.66)	(-1.55, 3.00)	(-4.40, 1.14)	

LS=Least squares; CI=Confidence Interval; SEM=Standard error of the LS mean.

The difference of LS Means is calculated as the Danicopan mean minus Placebo mean.

Estimates are based on an MMRM that includes fixed, categorical effects of treatment group, study visit, and study visit by treatment group interaction as well as the continuous, fixed covariate of baseline WPAI:ANS value and the randomization stratification factors of transfusion history (> 2 or ≤ 2 transfusions within 6 months of Screening) and screening Hgb (< 8.5 g/dL or ≥ 8.5 g/dL).

WPAI:ANS is Work Productivity and Activity Impairment Questionnaire: Anemic Symptoms V2.0. All the Questionnaires are collected in past 7 days. Only how much anemic symptoms affect ability on regular daily activities, other than work was reported.

For how much anemic symptoms affect ability on regular daily activities, other than work, the data were collected as 10 level from 0 which indicate Anemic symptoms had no effect on daily activities to 10 which dicate Anemic symptoms completely prevented patients from doing daily activites.

P-value is from difference of LSM from MMRM model. Interaction test p-value is from the same MMRM model with additional age variable and age by treatment interaction term.

Baseline is defined as the last non-missing value prior to the first dose of study drug.

For how much anemic symptoms affect ability on regular daily activities, other than work, the data were collected as 10 level from 0 which indicate Anemic symptoms had no effect on daily activities to 10 which dicate Anemic symptoms completely prevented patients from doing daily activites.

P-value is from difference of LSM from MMRM model. Interaction test p-value is from the same MMRM model with additional screening Hgb level variable and screening Hgb level by treatment interaction term.

Baseline is defined as the last non-missing value prior to the first dose of study drug.

	95% CI for LS MEAN	(-1.56, 1.78)	(-3.30, 1.66)	(-2.16, 4.03)	
Week 4	LS Mean (SEM)	1.25 (0.811)	-0.24 (1.020)	1.49 (1.318)	0.2675
	95% CI for LS MEAN	(-0.41, 2.92)	(-2.35, 1.87)	(-1.22, 4.21)	
Week 8	LS Mean (SEM)	-0.99 (1.030)	1.46 (2.321)	-2.45 (2.605)	0.3585
	95% CI for LS MEAN	(-3.11, 1.13)	(-3.36, 6.27)	(-7.86, 2.97)	
Week 12	LS Mean (SEM)	-0.89 (0.811)	-0.74 (1.020)	-0.15 (1.318)	0.9111
	95% CI for LS MEAN	(-2.56, 0.78)	(-2.85, 1.37)	(-2.86, 2.56)	

LS=Least squares; CI=Confidence Interval; SEM=Standard error of the LS mean.

The difference of LS Means is calculated as the Danicopan mean minus Placebo mean.

Estimates are based on an MMRM that includes fixed, categorical effects of treatment group, study visit, and study visit by treatment group interaction as well as the continuous, fixed covariate of baseline WPAI:ANS value and the randomization stratification factors of transfusion history (> 2 or ≤ 2 transfusions within 6 months of Screening) and screening Hgb (< 8.5 g/dL or ≥ 8.5 g/dL).

WPAI:ANS is Work Productivity and Activity Impairment Questionnaire: Anemic Symptoms V2.0. All the Questionnaires are collected in past 7 days. Only how much anemic symptoms affect ability on regular daily activities, other than work was reported.

For how much anemic symptoms affect ability on regular daily activities, other than work, the data were collected as 10 level from 0 which indicate Anemic symptoms had no effect on daily activities to 10 which dicate Anemic symptoms completely prevented patients from doing daily activites.

P-value is from difference of LSM from MMRM model. Interaction test p-value is from the same MMRM model with additional race variable and race by treatment interaction term.

Baseline is defined as the last non-missing value prior to the first dose of study drug.

EORTC QLQ-C30 is European Organization for Research and Treatment of Cancer Quality of Life Questionnaire-Core 30 Scale. Functional scales include global health status/QoL, physical functioning, role functioning, emotional functioning, cognitive functioning and social functioning.

Each subscale has a range of 0 - 100%. A high scale score represents a higher response level. Thus a high score for a functional scale represents a high level of functioning but a high score for a symptom scale represents a high level of symptomatology/problem.

Patients were randomized to Danicopan or Placebo for 12 weeks as Treatment Period 1. At Week 12, patients randomized to Placebo were switched to Danicopan for an additional 12 weeks as Treatment Period 2 and patients randomized to Danicopan continued on Danicopan during Treatment Period 2. At the end of the Treatment Period 2 (Week 24), patients entered the Long Term Extension (LTE) Period and continue to receive Danicopan.

D->D: Danicopan at Treatment Period 1 and Danicopan at Treatment Period 2; P->D: Placebo at Treatment Period 1 and Danicopan at Treatment Period 2.

Change from baseline is summarized only for patients who have data at baseline and the specified time point.

Baseline is defined as the last non-missing value prior to the first dose of study drug.

Actual values for Total group is summarized only for baseline and the time points from Long Term Extension (LTE).

EORTC QLQ-C30 is European Organization for Research and Treatment of Cancer Quality of Life Questionnaire-Core 30 Scale. Functional scales include global health status/QoL, physical functioning, role functioning, emotional functioning, cognitive functioning and social functioning.

Each subscale has a range of 0 - 100%. A high scale score represents a higher response level. Thus a high score for a functional scale represents a high level of functioning but a high score for a symptom scale represents a high level of symptomatology/problem.

Patients were randomized to Danicopan or Placebo for 12 weeks as Treatment Period 1. At Week 12, patients randomized to Placebo were switched to Danicopan for an additional 12 weeks as Treatment Period 2 and patients randomized to Danicopan continued on Danicopan during Treatment Period 2. At the end of the Treatment Period 2 (Week 24), patients entered the Long Term Extension (LTE) Period and continue to receive Danicopan.

D->D: Danicopan at Treatment Period 1 and Danicopan at Treatment Period 2; P->D: Placebo at Treatment Period 1 and Danicopan at Treatment Period 2.

Change from baseline is summarized only for patients who have data at baseline and the specified time point.

Baseline is defined as the last non-missing value prior to the first dose of study drug.

Actual values for Total group is summarized only for baseline and the time points from Long Term Extension (LTE).

EORTC QLQ-C30 is European Organization for Research and Treatment of Cancer Quality of Life Questionnaire-Core 30 Scale. Functional scales include global health status/QoL, physical functioning, role functioning, emotional functioning, cognitive functioning and social functioning.

Each subscale has a range of 0 - 100%. A high scale score represents a higher response level. Thus a high score for a functional scale represents a high level of functioning but a high score for a symptom scale represents a high level of symptomatology/problem.

Patients were randomized to Danicopan or Placebo for 12 weeks as Treatment Period 1. At Week 12, patients randomized to Placebo were switched to Danicopan for an additional 12 weeks as Treatment Period 2 and patients randomized to Danicopan continued on Danicopan during Treatment Period 2. At the end of the Treatment Period 2 (Week 24), patients entered the Long Term Extension (LTE) Period and continue to receive Danicopan.

D->D: Danicopan at Treatment Period 1 and Danicopan at Treatment Period 2; P->D: Placebo at Treatment Period 1 and Danicopan at Treatment Period 2.

Change from baseline is summarized only for patients who have data at baseline and the specified time point.

Baseline is defined as the last non-missing value prior to the first dose of study drug.

Actual values for Total group is summarized only for baseline and the time points from Long Term Extension (LTE).

EORTC QLQ-C30 is European Organization for Research and Treatment of Cancer Quality of Life Questionnaire-Core 30 Scale. Functional scales include global health status/QoL, physical functioning, role functioning, emotional functioning, cognitive functioning and social functioning.

Each subscale has a range of 0 - 100%. A high scale score represents a higher response level. Thus a high score for a functional scale represents a high level of functioning but a high score for a symptom scale represents a high level of symptomatology/problem.

Patients were randomized to Danicopan or Placebo for 12 weeks as Treatment Period 1. At Week 12, patients randomized to Placebo were switched to Danicopan for an additional 12 weeks as Treatment Period 2 and patients randomized to Danicopan continued on Danicopan during Treatment Period 2. At the end of the Treatment Period 2 (Week 24), patients entered the Long Term Extension (LTE) Period and continue to receive Danicopan.

D->D: Danicopan at Treatment Period 1 and Danicopan at Treatment Period 2; P->D: Placebo at Treatment Period 1 and Danicopan at Treatment Period 2.

Change from baseline is summarized only for patients who have data at baseline and the specified time point.

Baseline is defined as the last non-missing value prior to the first dose of study drug.

Actual values for Total group is summarized only for baseline and the time points from Long Term Extension (LTE).

Week 4	LS Mean (SEM)	13.82 (2.998)	0.62 (4.668)	13.20 (5.462)	0.0181
	95% CI for LS MEAN	(7.85, 19.79)	(-8.68, 9.92)	(2.31, 24.08)	
Week 8	LS Mean (SEM)	13.39 (3.121)	-6.53 (4.949)	19.92 (5.758)	0.0010
	95% CI for LS MEAN	(7.15, 19.63)	(-16.42, 3.36)	(8.41, 31.44)	
Week 12	LS Mean (SEM)	13.40 (3.100)	2.80 (4.736)	10.61 (5.576)	0.0611
	95% CI for LS MEAN	(7.23, 19.57)	(-6.64, 12.23)	(-0.51, 21.72)	

EORTC QLQ-C30 is European Organization for Research and Treatment of Cancer Quality of Life Questionnaire-Core 30 Scale. Functional scales include global health status/QoL, physical functioning, role functioning, emotional functioning, cognitive functioning and social functioning.

Each subscale has a range of 0 - 100%. A high scale score represents a higher response level. Thus a high score for a functional scale represents a high level of functioning but a high score for a symptom scale represents a high level of symptomatology/problem.

LS=Least squares; CI=Confidence Interval; SEM=Standard error of the LS mean.

The difference of LS Means is calculated as the Danicopan mean minus Placebo mean.

Estimates are based on an MMRM that includes fixed, categorical effects of treatment group, study visit, and study visit by treatment group interaction as well as the continuous, fixed covariate of baseline EORTC QLQ-C30 score value and the randomization stratification factors of transfusion history (> 2 or ≤ 2 transfusions within 6 months of Screening) and screening Hgb (< 8.5 g/dL or ≥ 8.5 g/dL). An Unstructured covariance structure was used.

P-value is from difference of LSM from MMRM model.

Baseline is defined as the last non-missing value prior to the first dose of study drug.

EORTC QLQ-C30 is European Organization for Research and Treatment of Cancer Quality of Life Questionnaire-Core 30 Scale. Functional scales include global health status/QoL, physical functioning, role functioning, emotional functioning, cognitive functioning and social functioning.

Each subscale has a range of 0 - 100%. A high scale score represents a higher response level. Thus a high score for a functional scale represents a high level of functioning but a high score for a symptom scale represents a high level of symptomatology/problem.

Patients were randomized to Danicopan or Placebo for 12 weeks as Treatment Period 1. At Week 12, patients randomized to Placebo were switched to Danicopan for an additional 12 weeks as Treatment Period 2 and patients randomized to Danicopan continued on Danicopan during Treatment Period 2. At the end of the Treatment Period 2 (Week 24), patients entered the Long Term Extension (LTE) Period and continue to receive Danicopan.

D->D: Danicopan at Treatment Period 1 and Danicopan at Treatment Period 2; P->D: Placebo at Treatment Period 1 and Danicopan at Treatment Period 2. Change from baseline is summarized only for patients who have data at baseline and the specified time point.

Baseline is defined as the last non-missing value prior to the first dose of study drug.

Actual values for Total group is summarized only for baseline and the time points from Long Term Extension (LTE).

EORTC QLQ-C30 is European Organization for Research and Treatment of Cancer Quality of Life Questionnaire-Core 30 Scale. Functional scales include global health status/QoL, physical functioning, role functioning, emotional functioning, cognitive functioning and social functioning. Each subscale has a range of 0 - 100%. A high scale score represents a higher response level. Thus a high score for a functional scale represents a high level of functioning but a high score for a symptom scale represents a high level of symptomatology/problem.

Patients were randomized to Danicopan or Placebo for 12 weeks as Treatment Period 1. At Week 12, patients randomized to Placebo were switched to Danicopan for an additional 12 weeks as Treatment Period 2 and patients randomized to Danicopan continued on Danicopan during Treatment Period 2. At the end of the Treatment Period 2 (Week 24), patients entered the Long Term Extension (LTE) Period and continue to receive Danicopan.

D->D: Danicopan at Treatment Period 1 and Danicopan at Treatment Period 2; P->D: Placebo at Treatment Period 1 and Danicopan at Treatment Period 2. Change from baseline is summarized only for patients who have data at baseline and the specified time point.

Baseline is defined as the last non-missing value prior to the first dose of study drug.

Actual values for Total group is summarized only for baseline and the time points from Long Term Extension (LTE).

EORTC QLQ-C30 is European Organization for Research and Treatment of Cancer Quality of Life Questionnaire-Core 30 Scale. Functional scales include global health status/QoL, physical functioning, role functioning, emotional functioning, cognitive functioning and social functioning.

Each subscale has a range of 0 - 100%. A high scale score represents a higher response level. Thus a high score for a functional scale represents a high level of functioning but a high score for a symptom scale represents a high level of symptomatology/problem.

Patients were randomized to Danicopan or Placebo for 12 weeks as Treatment Period 1. At Week 12, patients randomized to Placebo were switched to Danicopan for an additional 12 weeks as Treatment Period 2 and patients randomized to Danicopan continued on Danicopan during Treatment Period 2. At the end of the Treatment Period 2 (Week 24), patients entered the Long Term Extension (LTE) Period and continue to receive Danicopan.

D->D: Danicopan at Treatment Period 1 and Danicopan at Treatment Period 2; P->D: Placebo at Treatment Period 1 and Danicopan at Treatment Period 2.

Change from baseline is summarized only for patients who have data at baseline and the specified time point.

Baseline is defined as the last non-missing value prior to the first dose of study drug.

Actual values for Total group is summarized only for baseline and the time points from Long Term Extension (LTE).

At Week 12, patients randomized to Placebo were switched to Danicopan for an additional 12 weeks as Treatment Period 2 and patients randomized to Danicopan continued on Danicopan during Treatment Period 2. At the end of the Treatment Period 2 (Week 24), patients entered the Long Term Extension (LTE) Period and continue to receive Danicopan.

D->D: Danicopan at Treatment Period 1 and Danicopan at Treatment Period 2; P->D: Placebo at Treatment Period 1 and Danicopan at Treatment Period 2.

Change from baseline is summarized only for patients who have data at baseline and the specified time point.

Baseline is defined as the last non-missing value prior to the first dose of study drug.

Actual values for Total group is summarized only for baseline and the time points from Long Term Extension (LTE).

EORTC QLQ-C30 is European Organization for Research and Treatment of Cancer Quality of Life Questionnaire-Core 30 Scale. Functional scales include global health status/QoL, physical functioning, role functioning, emotional functioning, cognitive functioning and social functioning.

Each subscale has a range of 0 - 100%. A high scale score represents a higher response level. Thus a high score for a functional scale represents a high level of functioning but a high score for a symptom scale represents a high level of symptomatology/problem.

Patients were randomized to Danicopan or Placebo for 12 weeks as Treatment Period 1. At Week 12, patients randomized to Placebo were switched to Danicopan for an additional 12 weeks as Treatment Period 2 and patients randomized to Danicopan continued on Danicopan during Treatment Period 2. At the end of the Treatment Period 2 (Week 24), patients entered the Long Term Extension (LTE) Period and continue to receive Danicopan.

D->D: Danicopan at Treatment Period 1 and Danicopan at Treatment Period 2; P->D: Placebo at Treatment Period 1 and Danicopan at Treatment Period 2.

Change from baseline is summarized only for patients who have data at baseline and the specified time point.

Baseline is defined as the last non-missing value prior to the first dose of study drug.

Actual values for Total group is summarized only for baseline and the time points from Long Term Extension (LTE).

Min, Max	16.7, 100.0	-50.0, 33.3	25.0, 83.3	-25.0, 50.0		

EORTC QLQ-C30 is European Organization for Research and Treatment of Cancer Quality of Life Questionnaire-Core 30 Scale. Functional scales include global health status/QoL, physical functioning, role functioning, emotional functioning, cognitive functioning and social functioning.

Each subscale has a range of 0 - 100%. A high scale score represents a higher response level. Thus a high score for a functional scale represents a high level of functioning but a high score for a symptom scale represents a high level of symptomatology/problem.

Patients were randomized to Danicopan or Placebo for 12 weeks as Treatment Period 1. At Week 12, patients randomized to Placebo were switched to Danicopan for an additional 12 weeks as Treatment Period 2 and patients randomized to Danicopan continued on Danicopan during Treatment Period 2. At the end of the Treatment Period 2 (Week 24), patients entered the Long Term Extension (LTE) Period and continue to receive Danicopan.

D->D: Danicopan at Treatment Period 1 and Danicopan at Treatment Period 2; P->D: Placebo at Treatment Period 1 and Danicopan at Treatment Period 2.

Change from baseline is summarized only for patients who have data at baseline and the specified time point.

Baseline is defined as the last non-missing value prior to the first dose of study drug.

Actual values for Total group is summarized only for baseline and the time points from Long Term Extension (LTE).

EORTC QLQ-C30 is European Organization for Research and Treatment of Cancer Quality of Life Questionnaire-Core 30 Scale. Functional scales include global health status/QoL, physical functioning, role functioning, emotional functioning, cognitive functioning and social functioning.

Each subscale has a range of 0 - 100%. A high scale score represents a higher response level. Thus a high score for a functional scale represents a high level of functioning but a high score for a symptom scale represents a high level of symptomatology/problem.

Patients were randomized to Danicopan or Placebo for 12 weeks as Treatment Period 1. At Week 12, patients randomized to Placebo were switched to Danicopan for an additional 12 weeks as Treatment Period 2 and patients randomized to Danicopan continued on Danicopan during Treatment Period 2. At the end of the Treatment Period 2 (Week 24), patients entered the Long Term Extension (LTE) Period and continue to receive Danicopan.

D->D: Danicopan at Treatment Period 1 and Danicopan at Treatment Period 2; P->D: Placebo at Treatment Period 1 and Danicopan at Treatment Period 2.

Change from baseline is summarized only for patients who have data at baseline and the specified time point.

Baseline is defined as the last non-missing value prior to the first dose of study drug.

Actual values for Total group is summarized only for baseline and the time points from Long Term Extension (LTE).

EORTC QLQ-C30 is European Organization for Research and Treatment of Cancer Quality of Life Questionnaire-Core 30 Scale. Functional scales include global health status/QoL, physical functioning, role functioning, emotional functioning, cognitive functioning and social functioning.

Each subscale has a range of 0 - 100%. A high scale score represents a higher response level. Thus a high score for a functional scale represents a high level of functioning but a high score for a symptom scale represents a high level of symptomatology/problem.

Patients were randomized to Danicopan or Placebo for 12 weeks as Treatment Period 1. At Week 12, patients randomized to Placebo were switched to Danicopan for an additional 12 weeks as Treatment Period 2 and patients randomized to Danicopan continued on Danicopan during Treatment Period 2. At the end of the Treatment Period 2 (Week 24), patients entered the Long Term Extension (LTE) Period and continue to receive Danicopan.

D->D: Danicopan at Treatment Period 1 and Danicopan at Treatment Period 2; P->D: Placebo at Treatment Period 1 and Danicopan at Treatment Period 2.

Change from baseline is summarized only for patients who have data at baseline and the specified time point.

Baseline is defined as the last non-missing value prior to the first dose of study drug.

Actual values for Total group is summarized only for baseline and the time points from Long Term Extension (LTE).

EORTC QLQ-C30 is European Organization for Research and Treatment of Cancer Quality of Life Questionnaire-Core 30 Scale. Functional scales include global health status/QoL, physical functioning, role functioning, emotional functioning, cognitive functioning and social functioning.

Each subscale has a range of 0 - 100%. A high scale score represents a higher response level. Thus a high score for a functional scale represents a high level of functioning but a high score for a symptom scale represents a high level of symptomatology/problem.

Patients were randomized to Danicopan or Placebo for 12 weeks as Treatment Period 1. At Week 12, patients randomized to Placebo were switched to Danicopan for an additional 12 weeks as Treatment Period 2 and patients randomized to Danicopan continued on Danicopan during Treatment Period 2. At the end of the Treatment Period 2 (Week 24), patients entered the Long Term Extension (LTE) Period and continue to receive Danicopan.

D->D: Danicopan at Treatment Period 1 and Danicopan at Treatment Period 2; P->D: Placebo at Treatment Period 1 and Danicopan at Treatment Period 2.

Change from baseline is summarized only for patients who have data at baseline and the specified time point.

Baseline is defined as the last non-missing value prior to the first dose of study drug.

Actual values for Total group is summarized only for baseline and the time points from Long Term Extension (LTE).

EORTC QLQ-C30 is European Organization for Research and Treatment of Cancer Quality of Life Questionnaire-Core 30 Scale. Functional scales include global health status/QoL, physical functioning, role functioning, emotional functioning, cognitive functioning and social functioning.

Each subscale has a range of 0 - 100%. A high scale score represents a higher response level. Thus a high score for a functional scale represents a high level of functioning but a high score for a symptom scale represents a high level of symptomatology/problem.

Patients were randomized to Danicopan or Placebo for 12 weeks as Treatment Period 1. At Week 12, patients randomized to Placebo were switched to Danicopan for an additional 12 weeks as Treatment Period 2 and patients randomized to Danicopan continued on Danicopan during Treatment Period 2. At the end of the Treatment Period 2 (Week 24), patients entered the Long Term Extension (LTE) Period and continue to receive Danicopan.

D->D: Danicopan at Treatment Period 1 and Danicopan at Treatment Period 2; P->D: Placebo at Treatment Period 1 and Danicopan at Treatment Period 2.

Change from baseline is summarized only for patients who have data at baseline and the specified time point.

Baseline is defined as the last non-missing value prior to the first dose of study drug.

Actual values for Total group is summarized only for baseline and the time points from Long Term Extension (LTE).

EORTC QLQ-C30 is European Organization for Research and Treatment of Cancer Quality of Life Questionnaire-Core 30 Scale. Functional scales include global health status/QoL, physical functioning, role functioning, emotional functioning, cognitive functioning and social functioning.

Each subscale has a range of 0 - 100%. A high scale score represents a higher response level. Thus a high score for a functional scale represents a high level of functioning but a high score for a symptom scale represents a high level of symptomatology/problem.

Patients were randomized to Danicopan or Placebo for 12 weeks as Treatment Period 1. At Week 12, patients randomized to Placebo were switched to Danicopan for an additional 12 weeks as Treatment Period 2 and patients randomized to Danicopan continued on Danicopan during Treatment Period 2. At the end of the Treatment Period 2 (Week 24), patients entered the Long Term Extension (LTE) Period and continue to receive Danicopan.

D->D: Danicopan at Treatment Period 1 and Danicopan at Treatment Period 2; P->D: Placebo at Treatment Period 1 and Danicopan at Treatment Period 2.

Change from baseline is summarized only for patients who have data at baseline and the specified time point.

Baseline is defined as the last non-missing value prior to the first dose of study drug.

Actual values for Total group is summarized only for baseline and the time points from Long Term Extension (LTE).

EORTC QLQ-C30 is European Organization for Research and Treatment of Cancer Quality of Life Questionnaire-Core 30 Scale. Functional scales include global health status/QoL, physical functioning, role functioning, emotional functioning, cognitive functioning and social functioning.

Each subscale has a range of 0 - 100%. A high scale score represents a higher response level. Thus a high score for a functional scale represents a high level of functioning but a high score for a symptom scale represents a high level of symptomatology/problem.

Patients were randomized to Danicopan or Placebo for 12 weeks as Treatment Period 1. At Week 12, patients randomized to Placebo were switched to Danicopan for an additional 12 weeks as Treatment Period 2 and patients randomized to Danicopan continued on Danicopan during Treatment Period 2. At the end of the Treatment Period 2 (Week 24), patients entered the Long Term Extension (LTE) Period and continue to receive Danicopan.

D->D: Danicopan at Treatment Period 1 and Danicopan at Treatment Period 2; P->D: Placebo at Treatment Period 1 and Danicopan at Treatment Period 2.

Change from baseline is summarized only for patients who have data at baseline and the specified time point.

Baseline is defined as the last non-missing value prior to the first dose of study drug.

Actual values for Total group is summarized only for baseline and the time points from Long Term Extension (LTE).

EORTC QLQ-C30 is European Organization for Research and Treatment of Cancer Quality of Life Questionnaire-Core 30 Scale. Functional scales include global health status/QoL, physical functioning, role functioning, emotional functioning, cognitive functioning and social functioning.

Each subscale has a range of 0 - 100%. A high scale score represents a higher response level. Thus a high score for a functional scale represents a high level of functioning but a high score for a symptom scale represents a high level of symptomatology/problem.

Patients were randomized to Danicopan or Placebo for 12 weeks as Treatment Period 1. At Week 12, patients randomized to Placebo were switched to Danicopan for an additional 12 weeks as Treatment Period 2 and patients randomized to Danicopan continued on Danicopan during Treatment Period 2. At the end of the Treatment Period 2 (Week 24), patients entered the Long Term Extension (LTE) Period and continue to receive Danicopan.

D->D: Danicopan at Treatment Period 1 and Danicopan at Treatment Period 2; P->D: Placebo at Treatment Period 1 and Danicopan at Treatment Period 2.

Change from baseline is summarized only for patients who have data at baseline and the specified time point.

Baseline is defined as the last non-missing value prior to the first dose of study drug.

Actual values for Total group is summarized only for baseline and the time points from Long Term Extension (LTE).

Change from baseline is summarized only for patients who have data at baseline and the specified time point.

Baseline is defined as the last non-missing value prior to the first dose of study drug.

Actual values for Total group is summarized only for baseline and the time points from Long Term Extension (LTE).

EORTC QLQ-C30 is European Organization for Research and Treatment of Cancer Quality of Life Questionnaire-Core 30 Scale. Functional scales include global health status/QoL, physical functioning, role functioning, emotional functioning, cognitive functioning and social functioning.

Each subscale has a range of 0 - 100%. A high scale score represents a higher response level. Thus a high score for a functional scale represents a high level of functioning but a high score for a symptom scale represents a high level of symptomatology/problem.

Patients were randomized to Danicopan or Placebo for 12 weeks as Treatment Period 1. At Week 12, patients randomized to Placebo were switched to Danicopan for an additional 12 weeks as Treatment Period 2 and patients randomized to Danicopan continued on Danicopan during Treatment Period 2. At the end of the Treatment Period 2 (Week 24), patients entered the Long Term Extension (LTE) Period and continue to receive Danicopan.

D->D: Danicopan at Treatment Period 1 and Danicopan at Treatment Period 2; P->D: Placebo at Treatment Period 1 and Danicopan at Treatment Period 2.

Change from baseline is summarized only for patients who have data at baseline and the specified time point.

Baseline is defined as the last non-missing value prior to the first dose of study drug.

Actual values for Total group is summarized only for baseline and the time points from Long Term Extension (LTE).

EORTC QLQ-C30 is European Organization for Research and Treatment of Cancer Quality of Life Questionnaire-Core 30 Scale. Functional scales include global health status/QoL, physical functioning, role functioning, emotional functioning, cognitive functioning and social functioning. Each subscale has a range of 0 - 100%. A high scale score represents a higher response level. Thus a high score for a functional scale represents a high level of functioning but a high score for a symptom scale represents a high level of symptomatology/problem.

Patients were randomized to Danicopan or Placebo for 12 weeks as Treatment Period 1. At Week 12, patients randomized to Placebo were switched to Danicopan for an additional 12 weeks as Treatment Period 2 and patients randomized to Danicopan continued on Danicopan during Treatment Period 2. At the end of the Treatment Period 2 (Week 24), patients entered the Long Term Extension (LTE) Period and continue to receive Danicopan.

D->D: Danicopan at Treatment Period 1 and Danicopan at Treatment Period 2; P->D: Placebo at Treatment Period 1 and Danicopan at Treatment Period 2. Change from baseline is summarized only for patients who have data at baseline and the specified time point.

Baseline is defined as the last non-missing value prior to the first dose of study drug.

Actual values for Total group is summarized only for baseline and the time points from Long Term Extension (LTE).
