n	44	43	21	21		
Mean (SD)	42.19 (7.855)	8.58 (7.615)	34.90 (11.536)	3.52 (9.553)		
Median	42.50	7.00	38.00	4.00		
Min, Max	20.0, 52.0	-3.0, 26.0	10.0, 52.0	-9.0, 26.0		
Week 14						
n	44	43	20	20		
Mean (SD)	43.02 (7.714)	8.92 (8.795)	36.84 (11.247)	4.49 (10.053)		
Median	44.00	7.00	41.00	5.88		
Min, Max	19.0, 52.0	-3.0, 35.0	16.0, 52.0	-15.0, 21.0		

Baseline is defined as the last non-missing value prior to the first dose of study drug.

Change from baseline is summarized only for patients who have data at baseline and the specified time point.

FACIT-Fatigue score ranges from 0-52, with a higher score indicating less fatigue.

Patients were randomized to Danicopan or Placebo for 12 weeks as Treatment Period 1. At Week 12, patients randomized to Placebo were switched to Danicopan for an additional 12 weeks as Treatment Period 2 and patients randomized to Danicopan continued on Danicopan during Treatment Period 2. At the end of the Treatment Period 2 (Week 24), patients entered the Long Term Extension (LTE) Period and continue to receive Danicopan.

D->D: Danicopan at Treatment Period 1 and Danicopan at Treatment Period 2; P->D: Placebo at Treatment Period 1 and Danicopan at Treatment Period 2.

Actual values for Total group is summarized only for baseline and the time points from Long Term Extension (LTE).

Baseline is defined as the last non-missing value prior to the first dose of study drug.
Change from baseline is summarized only for patients who have data at baseline and the specified time point.
FACIT-Fatigue score ranges from 0-52, with a higher score indicating less fatigue.
Patients were randomized to Danicopan or Placebo for 12 weeks as Treatment Period 1. At Week 12, patients randomized to Placebo were switched to Danicopan for an additional 12 weeks as Treatment Period 2 and patients randomized to Danicopan continued on Danicopan during Treatment Period 2. At the end of the Treatment Period 2 (Week 24), patients entered the Long Term Extension (LTE) Period and continue to receive Danicopan.
D->D: Danicopan at Treatment Period 1 and Danicopan at Treatment Period 2; P->D: Placebo at Treatment Period 1 and Danicopan at Treatment Period 2.
Actual values for Total group is summarized only for baseline and the time points from Long Term Extension (LTE).

Min, Max	7.0, 47.0	-10.0, 36.0	13.0, 39.0	-13.0, 17.0		

Baseline is defined as the last non-missing value prior to the first dose of study drug.

Change from baseline is summarized only for patients who have data at baseline and the specified time point.

FACIT-Fatigue score ranges from 0-52, with a higher score indicating less fatigue.

Patients were randomized to Danicopan or Placebo for 12 weeks as Treatment Period 1. At Week 12, patients randomized to Placebo were switched to Danicopan for an additional 12 weeks as Treatment Period 2 and patients randomized to Danicopan continued on Danicopan during Treatment Period 2. At the end of the Treatment Period 2 (Week 24), patients entered the Long Term Extension (LTE) Period and continue to receive Danicopan.

D->D: Danicopan at Treatment Period 1 and Danicopan at Treatment Period 2; P->D: Placebo at Treatment Period 1 and Danicopan at Treatment Period 2.

Actual values for Total group is summarized only for baseline and the time points from Long Term Extension (LTE).

Change from Baseline in FACIT Fatigue Scores During 12-Week of Treatment Period 1 by Sex
Analysis Using a Mixed Model for Repeated Measures (MMRM)
Modified Randomized Set

Male

Visit	Statistics	Danicopan (N = 22)	Placebo (N = 9)	Difference (Danicopan-Placebo)	P-value
Week 2	LS Mean (SEM)	4.68 (1.532)	1.16 (2.373)	3.52 (2.773)	0.2157
	95% CI for LS MEAN	(1.53, 7.83)	(-3.71, 6.04)	(-2.19, 9.23)	
Week 4	LS Mean (SEM)	5.92 (1.654)	2.38 (2.521)	3.53 (2.976)	0.2460
	95% CI for LS MEAN	(2.52, 9.32)	(-2.80, 7.57)	(-2.59, 9.66)	
Week 8	LS Mean (SEM)	5.28 (1.297)	1.21 (1.961)	4.07 (2.294)	0.0903
	95% CI for LS MEAN	(2.59, 7.98)	(-2.86, 5.28)	(-0.70, 8.85)	
Week 12	LS Mean (SEM)	5.93 (1.391)	1.83 (2.088)	4.10 (2.460)	0.1069
	95% CI for LS MEAN	(3.08, 8.78)	(-2.45, 6.11)	(-0.94, 9.15)	

LS=Least squares; CI=Confidence Interval; SEM=Standard error of the LS mean.

The difference of LS Means is calculated as the Danicopan mean minus Placebo mean.

Estimates are based on an MMRM that includes fixed, categorical effects of treatment group, study visit, and study visit by treatment group interaction as well as the continuous, fixed covariate of baseline FACIT Fatigue scores value and the randomization stratification factors of transfusion history (> 2 or ≤ 2 transfusions within 6 months of Screening) and screening Hgb (< 8.5 g/dL or ≥ 8.5 g/dL).

FACIT Fatigue score ranges from 0-52, with a higher score indicating less fatigue.

P-value is from difference of LSM from MMRM model. Interaction test p-value is from the same MMRM model with additional sex variable and sex by treatment interaction term.

Baseline is defined as the last non-missing value prior to the first dose of study drug.

	95% CI for LS MEAN	(1.20, 7.69)	(-8.38, 1.47)	(2.00, 13.80)	

LS=Least squares; CI=Confidence Interval; SEM=Standard error of the LS mean.

The difference of LS Means is calculated as the Danicopan mean minus Placebo mean.

Estimates are based on an MMRM that includes fixed, categorical effects of treatment group, study visit, and study visit by treatment group interaction as well as the continuous, fixed covariate of baseline FACIT Fatigue scores value and the randomization stratification factors of transfusion history (> 2 or ≤ 2 transfusions within 6 months of Screening) and screening Hgb (< 8.5 g/dL or ≥ 8.5 g/dL).

FACIT Fatigue score ranges from 0-52, with a higher score indicating less fatigue.

P-value is from difference of LSM from MMRM model. Interaction test p-value is from the same MMRM model with additional age variable and age by treatment interaction term.

Baseline is defined as the last non-missing value prior to the first dose of study drug.

Week 8	LS Mean (SEM)	4.22 (1.800)	-0.83 (2.610)	5.05 (3.127)	0.1201
	95% CI for LS MEAN	(0.49, 7.95)	(-6.22, 4.55)	(-1.42, 11.52)	
Week 12	LS Mean (SEM)	6.23 (1.498)	-0.19 (1.888)	6.43 (2.360)	0.0113
	95% CI for LS MEAN	(3.16, 9.30)	(-4.08, 3.69)	(1.58, 11.27)	

LS=Least squares; CI=Confidence Interval; SEM=Standard error of the LS mean.

The difference of LS Means is calculated as the Danicopan mean minus Placebo mean.

Estimates are based on an MMRM that includes fixed, categorical effects of treatment group, study visit, and study visit by treatment group interaction as well as the continuous, fixed covariate of baseline FACIT Fatigue scores value and the randomization stratification factors of transfusion history (> 2 or ≤ 2 transfusions within 6 months of Screening) and screening Hgb (< 8.5 g/dL or ≥ 8.5 g/dL).

FACIT Fatigue score ranges from 0-52, with a higher score indicating less fatigue.

P-value is from difference of LSM from MMRM model. Interaction test p-value is from the same MMRM model with additional background C5 inhibitor therapy variable and background C5 inhibitor therapy by treatment interaction term.

Baseline is defined as the last non-missing value prior to the first dose of study drug.

Baseline is defined as the last non-missing value prior to the first dose of study drug.

LSmeans and SE are from Mixed Model for Repeated Measures (MMRM).

FACIT Fatigue score ranges from 0-52, with a higher score indicating less fatigue.

Percentages are based on the total number of expected patients in each group.

EORTC QLQ-C30 is European Organization for Research and Treatment of Cancer Quality of Life Questionnaire-Core 30 Scale.

Each subscale has a range of 0 - 100%. A high scale score represents a higher response level. Thus a high score for a functional scale represents a high level of functioning but a high score for a symptom scale represents a high level of symptomatology/problem. (0= Not at all, 1 = A little bit, 2 = Somewhat, 3 = Quite a bit, 4 = Very much)

Subscale Score: PF2=Physical functioning, RF2=Role functioning, EF=Emotional functioning, CF=Cognitive functioning, SF=Social functioning, FA=Fatigue, NV=Nausea and vomiting, PA=Pain, DY=Dyspnoea, SL=Insomnia, AP=Appetite loss, CO=Constipation, DI=Diarrhoea, FI=Financial difficulties, QL2=Global health status/QoL

D->D: Danicopan at Treatment Period 1 and Danicopan at Treatment Period 2; P->D: Placebo at Treatment Period 1 and Danicopan at Treatment Period 2.

EORTC QLQ-C30 is European Organization for Research and Treatment of Cancer Quality of Life Questionnaire-Core 30 Scale. Symptom scales include fatigue, nausea and vomiting, pain, dyspnoea, insomnia, appetite loss, constipation, diarrhoea, and financial difficulties.

Each subscale has a range of 0 - 100%. A high scale score represents a higher response level. Thus a high score for a functional scale represents a high level of functioning but a high score for a symptom scale represents a high level of symptomatology/problem.

Patients were randomized to Danicopan or Placebo for 12 weeks as Treatment Period 1. At Week 12, patients randomized to Placebo were switched to Danicopan for an additional 12 weeks as Treatment Period 2 and patients randomized to Danicopan continued on Danicopan during Treatment Period 2. At the end of the Treatment Period 2 (Week 24), patients entered the Long Term Extension (LTE) Period and continue to receive Danicopan.

D->D: Danicopan at Treatment Period 1 and Danicopan at Treatment Period 2; P->D: Placebo at Treatment Period 1 and Danicopan at Treatment Period 2.

Change from baseline is summarized only for patients who have data at baseline and the specified time point.

Baseline is defined as the last non-missing value prior to the first dose of study drug.

Actual values for Total group is summarized only for baseline and the time points from Long Term Extension (LTE).

EORTC QLQ-C30 is European Organization for Research and Treatment of Cancer Quality of Life Questionnaire-Core 30 Scale. Symptom scales include fatigue, nausea and vomiting, pain, dyspnoea, insomnia, appetite loss, constipation, diarrhoea, and financial difficulties. Each subscale has a range of 0 - 100%. A high scale score represents a higher response level. Thus a high score for a functional scale represents a high level of functioning but a high score for a symptom scale represents a high level of symptomatology/problem. Patients were randomized to Danicopan or Placebo for 12 weeks as Treatment Period 1. At Week 12, patients randomized to Placebo were switched to Danicopan for an additional 12 weeks as Treatment Period 2 and patients randomized to Danicopan continued on Danicopan during Treatment Period 2. At the end of the Treatment Period 2 (Week 24), patients entered the Long Term Extension (LTE) Period and continue to receive Danicopan. D->D: Danicopan at Treatment Period 1 and Danicopan at Treatment Period 2; P->D: Placebo at Treatment Period 1 and Danicopan at Treatment Period 2. Change from baseline is summarized only for patients who have data at baseline and the specified time point. Baseline is defined as the last non-missing value prior to the first dose of study drug.

Actual values for Total group is summarized only for baseline and the time points from Long Term Extension (LTE).

EORTC QLQ-C30 is European Organization for Research and Treatment of Cancer Quality of Life Questionnaire-Core 30 Scale. Symptom scales include fatigue, nausea and vomiting, pain, dyspnoea, insomnia, appetite loss, constipation, diarrhoea, and financial difficulties.

Each subscale has a range of 0 - 100%. A high scale score represents a higher response level. Thus a high score for a functional scale represents a high level of functioning but a high score for a symptom scale represents a high level of symptomatology/problem.

Patients were randomized to Danicopan or Placebo for 12 weeks as Treatment Period 1. At Week 12, patients randomized to Placebo were switched to Danicopan for an additional 12 weeks as Treatment Period 2 and patients randomized to Danicopan continued on Danicopan during Treatment Period 2. At the end of the Treatment Period 2 (Week 24), patients entered the Long Term Extension (LTE) Period and continue to receive Danicopan.

D->D: Danicopan at Treatment Period 1 and Danicopan at Treatment Period 2; P->D: Placebo at Treatment Period 1 and Danicopan at Treatment Period 2.

Change from baseline is summarized only for patients who have data at baseline and the specified time point.

Baseline is defined as the last non-missing value prior to the first dose of study drug.

Actual values for Total group is summarized only for baseline and the time points from Long Term Extension (LTE).

EORTC QLQ-C30 is European Organization for Research and Treatment of Cancer Quality of Life Questionnaire-Core 30 Scale. Symptom scales include fatigue, nausea and vomiting, pain, dyspnoea, insomnia, appetite loss, constipation, diarrhoea, and financial difficulties.

Each subscale has a range of 0 - 100%. A high scale score represents a higher response level. Thus a high score for a functional scale represents a high level of functioning but a high score for a symptom scale represents a high level of symptomatology/problem.

Patients were randomized to Danicopan or Placebo for 12 weeks as Treatment Period 1. At Week 12, patients randomized to Placebo were switched to Danicopan for an additional 12 weeks as Treatment Period 2 and patients randomized to Danicopan continued on Danicopan during Treatment Period 2. At the end of the Treatment Period 2 (Week 24), patients entered the Long Term Extension (LTE) Period and continue to receive Danicopan.

D->D: Danicopan at Treatment Period 1 and Danicopan at Treatment Period 2; P->D: Placebo at Treatment Period 1 and Danicopan at Treatment Period 2.

Change from baseline is summarized only for patients who have data at baseline and the specified time point.

Baseline is defined as the last non-missing value prior to the first dose of study drug.

Actual values for Total group is summarized only for baseline and the time points from Long Term Extension (LTE).

Patients were randomized to Danicopan or Placebo for 12 weeks as Treatment Period 1. At Week 12, patients randomized to Placebo were switched to Danicopan for an additional 12 weeks as Treatment Period 2 and patients randomized to Danicopan continued on Danicopan during Treatment Period 2. At the end of the Treatment Period 2 (Week 24), patients entered the Long Term Extension (LTE) Period and continue to receive Danicopan.

D->D: Danicopan at Treatment Period 1 and Danicopan at Treatment Period 2; P->D: Placebo at Treatment Period 1 and Danicopan at Treatment Period 2.

Change from baseline is summarized only for patients who have data at baseline and the specified time point.

Baseline is defined as the last non-missing value prior to the first dose of study drug.

Actual values for Total group is summarized only for baseline and the time points from Long Term Extension (LTE).

EORTC QLQ-C30 is European Organization for Research and Treatment of Cancer Quality of Life Questionnaire-Core 30 Scale. Symptom scales include fatigue, nausea and vomiting, pain, dyspnoea, insomnia, appetite loss, constipation, diarrhoea, and financial difficulties.

Each subscale has a range of 0 - 100%. A high scale score represents a higher response level. Thus a high score for a functional scale represents a high level of functioning but a high score for a symptom scale represents a high level of symptomatology/problem.

LS=Least squares; CI=Confidence Interval; SEM=Standard error of the LS mean.

The difference of LS Means is calculated as the Danicopan mean minus Placebo mean.

Estimates are based on an MMRM that includes fixed, categorical effects of treatment group, study visit, and study visit by treatment group interaction as well as the continuous, fixed covariate of baseline EORTC QLQ-C30 score value and the randomization stratification factors of transfusion history (> 2 or ≤ 2 transfusions within 6 months of Screening) and screening Hgb (< 8.5 g/dL or ≥ 8.5 g/dL). An Unstructured covariance structure was used.

P-value is from difference of LSM from MMRM model.

Baseline is defined as the last non-missing value prior to the first dose of study drug.

Week 12	LS Mean (SEM)	1.42 (1.790)	2.03 (2.676)	-0.62 (3.192)	0.8477
	95% CI for LS MEAN	(-2.16, 5.00)	(-3.32, 7.39)	(-7.01, 5.78)	

EORTC QLQ-C30 is European Organization for Research and Treatment of Cancer Quality of Life Questionnaire-Core 30 Scale. Symptom scales include fatigue, nausea and vomiting, pain, dyspnoea, insomnia, appetite loss, constipation, diarrhoea, and financial difficulties.

Each subscale has a range of 0 - 100%. A high scale score represents a higher response level. Thus a high score for a functional scale represents a high level of functioning but a high score for a symptom scale represents a high level of symptomatology/problem.

LS=Least squares; CI=Confidence Interval; SEM=Standard error of the LS mean.

The difference of LS Means is calculated as the Danicopan mean minus Placebo mean.

Estimates are based on an MMRM that includes fixed, categorical effects of treatment group, study visit, and study visit by treatment group interaction as well as the continuous, fixed covariate of baseline EORTC QLQ-C30 score value and the randomization stratification factors of transfusion history (> 2 or ≤ 2 transfusions within 6 months of Screening) and screening Hgb (< 8.5 g/dL or ≥ 8.5 g/dL). An Unstructured covariance structure was used.

P-value is from difference of LSM from MMRM model.

Baseline is defined as the last non-missing value prior to the first dose of study drug.

Baseline is defined as the last non-missing value prior to the first dose of study drug.

LSmeans and SE are from Mixed Model for Repeated Measures (MMRM).

EORTC QLQ-C30 is European Organization for Research and Treatment of Cancer Quality of Life Questionnaire-Core 30 Scale. Symptom scales include fatigue, nausea and vomiting, pain, dyspnoea, insomnia, appetite loss, constipation, diarrhoea, and financial difficulties.

Each subscale has a range of 0 - 100%. A high scale score represents a higher response level. Thus a high score for a functional scale represents a high level of functioning but a high score for a symptom scale represents a high level of symptomatology/problem.

EORTC QLQ-C30 is European Organization for Research and Treatment of Cancer Quality of Life Questionnaire-Core 30 Scale. Symptom scales include fatigue, nausea and vomiting, pain, dyspnoea, insomnia, appetite loss, constipation, diarrhoea, and financial difficulties.

Each subscale has a range of 0 - 100%. A high scale score represents a higher response level. Thus a high score for a functional scale represents a high level of functioning but a high score for a symptom scale represents a high level of symptomatology/problem.

Patients were randomized to Danicopan or Placebo for 12 weeks as Treatment Period 1. At Week 12, patients randomized to Placebo were switched to Danicopan for an additional 12 weeks as Treatment Period 2 and patients randomized to Danicopan continued on Danicopan during Treatment Period 2. At the end of the Treatment Period 2 (Week 24), patients entered the Long Term Extension (LTE) Period and continue to receive Danicopan.

D->D: Danicopan at Treatment Period 1 and Danicopan at Treatment Period 2; P->D: Placebo at Treatment Period 1 and Danicopan at Treatment Period 2.

Change from baseline is summarized only for patients who have data at baseline and the specified time point.

Baseline is defined as the last non-missing value prior to the first dose of study drug.

Actual values for Total group is summarized only for baseline and the time points from Long Term Extension (LTE).

EORTC QLQ-C30 is European Organization for Research and Treatment of Cancer Quality of Life Questionnaire-Core 30 Scale. Symptom scales include fatigue, nausea and vomiting, pain, dyspnoea, insomnia, appetite loss, constipation, diarrhoea, and financial difficulties.

Each subscale has a range of 0 - 100%. A high scale score represents a higher response level. Thus a high score for a functional scale represents a high level of functioning but a high score for a symptom scale represents a high level of symptomatology/problem.

Patients were randomized to Danicopan or Placebo for 12 weeks as Treatment Period 1. At Week 12, patients randomized to Placebo were switched to Danicopan for an additional 12 weeks as Treatment Period 2 and patients randomized to Danicopan continued on Danicopan during Treatment Period 2. At the end of the Treatment Period 2 (Week 24), patients entered the Long Term Extension (LTE) Period and continue to receive Danicopan.

D->D: Danicopan at Treatment Period 1 and Danicopan at Treatment Period 2; P->D: Placebo at Treatment Period 1 and Danicopan at Treatment Period 2.

Change from baseline is summarized only for patients who have data at baseline and the specified time point.

Baseline is defined as the last non-missing value prior to the first dose of study drug.

Actual values for Total group is summarized only for baseline and the time points from Long Term Extension (LTE).

EORTC QLQ-C30 is European Organization for Research and Treatment of Cancer Quality of Life Questionnaire-Core 30 Scale. Symptom scales include fatigue, nausea and vomiting, pain, dyspnoea, insomnia, appetite loss, constipation, diarrhoea, and financial difficulties.

Each subscale has a range of 0 - 100%. A high scale score represents a higher response level. Thus a high score for a functional scale represents a high level of functioning but a high score for a symptom scale represents a high level of symptomatology/problem.

Patients were randomized to Danicopan or Placebo for 12 weeks as Treatment Period 1. At Week 12, patients randomized to Placebo were switched to Danicopan for an additional 12 weeks as Treatment Period 2 and patients randomized to Danicopan continued on Danicopan during Treatment Period 2. At the end of the Treatment Period 2 (Week 24), patients entered the Long Term Extension (LTE) Period and continue to receive Danicopan.

D->D: Danicopan at Treatment Period 1 and Danicopan at Treatment Period 2; P->D: Placebo at Treatment Period 1 and Danicopan at Treatment Period 2. Change from baseline is summarized only for patients who have data at baseline and the specified time point.

Baseline is defined as the last non-missing value prior to the first dose of study drug.

Actual values for Total group is summarized only for baseline and the time points from Long Term Extension (LTE).

EORTC QLQ-C30 is European Organization for Research and Treatment of Cancer Quality of Life Questionnaire-Core 30 Scale. Symptom scales include fatigue, nausea and vomiting, pain, dyspnoea, insomnia, appetite loss, constipation, diarrhoea, and financial difficulties.

Each subscale has a range of 0 - 100%. A high scale score represents a higher response level. Thus a high score for a functional scale represents a high level of functioning but a high score for a symptom scale represents a high level of symptomatology/problem.

Patients were randomized to Danicopan or Placebo for 12 weeks as Treatment Period 1. At Week 12, patients randomized to Placebo were switched to Danicopan for an additional 12 weeks as Treatment Period 2 and patients randomized to Danicopan continued on Danicopan during Treatment Period 2. At the end of the Treatment Period 2 (Week 24), patients entered the Long Term Extension (LTE) Period and continue to receive Danicopan.

D->D: Danicopan at Treatment Period 1 and Danicopan at Treatment Period 2; P->D: Placebo at Treatment Period 1 and Danicopan at Treatment Period 2.

Change from baseline is summarized only for patients who have data at baseline and the specified time point.

Baseline is defined as the last non-missing value prior to the first dose of study drug.

Actual values for Total group is summarized only for baseline and the time points from Long Term Extension (LTE).

EORTC QLQ-C30 is European Organization for Research and Treatment of Cancer Quality of Life Questionnaire-Core 30 Scale. Symptom scales include fatigue, nausea and vomiting, pain, dyspnoea, insomnia, appetite loss, constipation, diarrhoea, and financial difficulties.

Each subscale has a range of 0 - 100%. A high scale score represents a higher response level. Thus a high score for a functional scale represents a high level of functioning but a high score for a symptom scale represents a high level of symptomatology/problem.

Patients were randomized to Danicopan or Placebo for 12 weeks as Treatment Period 1. At Week 12, patients randomized to Placebo were switched to Danicopan for an additional 12 weeks as Treatment Period 2 and patients randomized to Danicopan continued on Danicopan during Treatment Period 2. At the end of the Treatment Period 2 (Week 24), patients entered the Long Term Extension (LTE) Period and continue to receive Danicopan.

D->D: Danicopan at Treatment Period 1 and Danicopan at Treatment Period 2; P->D: Placebo at Treatment Period 1 and Danicopan at Treatment Period 2.

Change from baseline is summarized only for patients who have data at baseline and the specified time point.

Baseline is defined as the last non-missing value prior to the first dose of study drug.

Actual values for Total group is summarized only for baseline and the time points from Long Term Extension (LTE).

EORTC QLQ-C30 is European Organization for Research and Treatment of Cancer Quality of Life Questionnaire-Core 30 Scale. Symptom scales include fatigue, nausea and vomiting, pain, dyspnoea, insomnia, appetite loss, constipation, diarrhoea, and financial difficulties.

Each subscale has a range of 0 - 100%. A high scale score represents a higher response level. Thus a high score for a functional scale represents a high level of functioning but a high score for a symptom scale represents a high level of symptomatology/problem.

Patients were randomized to Danicopan or Placebo for 12 weeks as Treatment Period 1. At Week 12, patients randomized to Placebo were switched to Danicopan for an additional 12 weeks as Treatment Period 2 and patients randomized to Danicopan continued on Danicopan during Treatment Period 2. At the end of the Treatment Period 2 (Week 24), patients entered the Long Term Extension (LTE) Period and continue to receive Danicopan.

D->D: Danicopan at Treatment Period 1 and Danicopan at Treatment Period 2; P->D: Placebo at Treatment Period 1 and Danicopan at Treatment Period 2. Change from baseline is summarized only for patients who have data at baseline and the specified time point.

Baseline is defined as the last non-missing value prior to the first dose of study drug.

Actual values for Total group is summarized only for baseline and the time points from Long Term Extension (LTE).

EORTC QLQ-C30 is European Organization for Research and Treatment of Cancer Quality of Life Questionnaire-Core 30 Scale. Symptom scales include fatigue, nausea and vomiting, pain, dyspnoea, insomnia, appetite loss, constipation, diarrhoea, and financial difficulties. Each subscale has a range of 0 - 100%. A high scale score represents a higher response level. Thus a high score for a functional scale represents a high level of functioning but a high score for a symptom scale represents a high level of symptomatology/problem. Patients were randomized to Danicopan or Placebo for 12 weeks as Treatment Period 1. At Week 12, patients randomized to Placebo were switched to Danicopan for an additional 12 weeks as Treatment Period 2 and patients randomized to Danicopan continued on Danicopan during Treatment Period 2. At the end of the Treatment Period 2 (Week 24), patients entered the Long Term Extension (LTE) Period and continue to receive Danicopan. D->D: Danicopan at Treatment Period 1 and Danicopan at Treatment Period 2; P->D: Placebo at Treatment Period 1 and Danicopan at Treatment Period 2. Change from baseline is summarized only for patients who have data at baseline and the specified time point. Baseline is defined as the last non-missing value prior to the first dose of study drug.

Actual values for Total group is summarized only for baseline and the time points from Long Term Extension (LTE).

EORTC QLQ-C30 is European Organization for Research and Treatment of Cancer Quality of Life Questionnaire-Core 30 Scale. Symptom scales include fatigue, nausea and vomiting, pain, dyspnoea, insomnia, appetite loss, constipation, diarrhoea, and financial difficulties.

Each subscale has a range of 0 - 100%. A high scale score represents a higher response level. Thus a high score for a functional scale represents a high level of functioning but a high score for a symptom scale represents a high level of symptomatology/problem.

Patients were randomized to Danicopan or Placebo for 12 weeks as Treatment Period 1. At Week 12, patients randomized to Placebo were switched to Danicopan for an additional 12 weeks as Treatment Period 2 and patients randomized to Danicopan continued on Danicopan during Treatment Period 2. At the end of the Treatment Period 2 (Week 24), patients entered the Long Term Extension (LTE) Period and continue to receive Danicopan.

D->D: Danicopan at Treatment Period 1 and Danicopan at Treatment Period 2; P->D: Placebo at Treatment Period 1 and Danicopan at Treatment Period 2.

Change from baseline is summarized only for patients who have data at baseline and the specified time point.

Baseline is defined as the last non-missing value prior to the first dose of study drug.

Actual values for Total group is summarized only for baseline and the time points from Long Term Extension (LTE).

Each subscale has a range of 0 - 100%. A high scale score represents a higher response level. Thus a high score for a functional scale represents a high level of functioning but a high score for a symptom scale represents a high level of symptomatology/problem.

Patients were randomized to Danicopan or Placebo for 12 weeks as Treatment Period 1. At Week 12, patients randomized to Placebo were switched to Danicopan for an additional 12 weeks as Treatment Period 2 and patients randomized to Danicopan continued on Danicopan during Treatment Period 2. At the end of the Treatment Period 2 (Week 24), patients entered the Long Term Extension (LTE) Period and continue to receive Danicopan.

D->D: Danicopan at Treatment Period 1 and Danicopan at Treatment Period 2; P->D: Placebo at Treatment Period 1 and Danicopan at Treatment Period 2.

Change from baseline is summarized only for patients who have data at baseline and the specified time point.

Baseline is defined as the last non-missing value prior to the first dose of study drug.

Actual values for Total group is summarized only for baseline and the time points from Long Term Extension (LTE).

EORTC QLQ-C30 is European Organization for Research and Treatment of Cancer Quality of Life Questionnaire-Core 30 Scale. Symptom scales include fatigue, nausea and vomiting, pain, dyspnoea, insomnia, appetite loss, constipation, diarrhoea, and financial difficulties. Each subscale has a range of 0 - 100%. A high scale score represents a higher response level. Thus a high score for a functional scale represents a high level of functioning but a high score for a symptom scale represents a high level of symptomatology/problem. Patients were randomized to Danicopan or Placebo for 12 weeks as Treatment Period 1. At Week 12, patients randomized to Placebo were switched to Danicopan for an additional 12 weeks as Treatment Period 2 and patients randomized to Danicopan continued on Danicopan during Treatment Period 2. At the end of the Treatment Period 2 (Week 24), patients entered the Long Term Extension (LTE) Period and continue to receive Danicopan. D->D: Danicopan at Treatment Period 1 and Danicopan at Treatment Period 2; P->D: Placebo at Treatment Period 1 and Danicopan at Treatment Period 2. Change from baseline is summarized only for patients who have data at baseline and the specified time point. Baseline is defined as the last non-missing value prior to the first dose of study drug.

Actual values for Total group is summarized only for baseline and the time points from Long Term Extension (LTE).

EORTC QLQ-C30 is European Organization for Research and Treatment of Cancer Quality of Life Questionnaire-Core 30 Scale. Symptom scales include fatigue, nausea and vomiting, pain, dyspnoea, insomnia, appetite loss, constipation, diarrhoea, and financial difficulties.

Each subscale has a range of 0 - 100%. A high scale score represents a higher response level. Thus a high score for a functional scale represents a high level of functioning but a high score for a symptom scale represents a high level of symptomatology/problem.

Patients were randomized to Danicopan or Placebo for 12 weeks as Treatment Period 1. At Week 12, patients randomized to Placebo were switched to Danicopan for an additional 12 weeks as Treatment Period 2 and patients randomized to Danicopan continued on Danicopan during Treatment Period 2. At the end of the Treatment Period 2 (Week 24), patients entered the Long Term Extension (LTE) Period and continue to receive Danicopan.

D->D: Danicopan at Treatment Period 1 and Danicopan at Treatment Period 2; P->D: Placebo at Treatment Period 1 and Danicopan at Treatment Period 2.

Change from baseline is summarized only for patients who have data at baseline and the specified time point.

Baseline is defined as the last non-missing value prior to the first dose of study drug.

Actual values for Total group is summarized only for baseline and the time points from Long Term Extension (LTE).

EORTC QLQ-C30 is European Organization for Research and Treatment of Cancer Quality of Life Questionnaire-Core 30 Scale. Symptom scales include fatigue, nausea and vomiting, pain, dyspnoea, insomnia, appetite loss, constipation, diarrhoea, and financial difficulties.

Each subscale has a range of 0 - 100%. A high scale score represents a higher response level. Thus a high score for a functional scale represents a high level of functioning but a high score for a symptom scale represents a high level of symptomatology/problem.

Patients were randomized to Danicopan or Placebo for 12 weeks as Treatment Period 1. At Week 12, patients randomized to Placebo were switched to Danicopan for an additional 12 weeks as Treatment Period 2 and patients randomized to Danicopan continued on Danicopan during Treatment Period 2. At the end of the Treatment Period 2 (Week 24), patients entered the Long Term Extension (LTE) Period and continue to receive Danicopan.

D->D: Danicopan at Treatment Period 1 and Danicopan at Treatment Period 2; P->D: Placebo at Treatment Period 1 and Danicopan at Treatment Period 2. Change from baseline is summarized only for patients who have data at baseline and the specified time point.

Baseline is defined as the last non-missing value prior to the first dose of study drug.

Actual values for Total group is summarized only for baseline and the time points from Long Term Extension (LTE).

EORTC QLQ-C30 is European Organization for Research and Treatment of Cancer Quality of Life Questionnaire-Core 30 Scale. Symptom scales include fatigue, nausea and vomiting, pain, dyspnoea, insomnia, appetite loss, constipation, diarrhoea, and financial difficulties.

Each subscale has a range of 0 - 100%. A high scale score represents a higher response level. Thus a high score for a functional scale represents a high level of functioning but a high score for a symptom scale represents a high level of symptomatology/problem.

Patients were randomized to Danicopan or Placebo for 12 weeks as Treatment Period 1. At Week 12, patients randomized to Placebo were switched to Danicopan for an additional 12 weeks as Treatment Period 2 and patients randomized to Danicopan continued on Danicopan during Treatment Period 2. At the end of the Treatment Period 2 (Week 24), patients entered the Long Term Extension (LTE) Period and continue to receive Danicopan.

D->D: Danicopan at Treatment Period 1 and Danicopan at Treatment Period 2; P->D: Placebo at Treatment Period 1 and Danicopan at Treatment Period 2. Change from baseline is summarized only for patients who have data at baseline and the specified time point.

Baseline is defined as the last non-missing value prior to the first dose of study drug.

Actual values for Total group is summarized only for baseline and the time points from Long Term Extension (LTE).

EORTC QLQ-C30 is European Organization for Research and Treatment of Cancer Quality of Life Questionnaire-Core 30 Scale. Symptom scales include fatigue, nausea and vomiting, pain, dyspnoea, insomnia, appetite loss, constipation, diarrhoea, and financial difficulties. Each subscale has a range of 0 - 100%. A high scale score represents a higher response level. Thus a high score for a functional scale represents a high level of functioning but a high score for a symptom scale represents a high level of symptomatology/problem. Patients were randomized to Danicopan or Placebo for 12 weeks as Treatment Period 1. At Week 12, patients randomized to Placebo were switched to Danicopan for an additional 12 weeks as Treatment Period 2 and patients randomized to Danicopan continued on Danicopan during Treatment Period 2. At the end of the Treatment Period 2 (Week 24), patients entered the Long Term Extension (LTE) Period and continue to receive Danicopan. D->D: Danicopan at Treatment Period 1 and Danicopan at Treatment Period 2; P->D: Placebo at Treatment Period 1 and Danicopan at Treatment Period 2. Change from baseline is summarized only for patients who have data at baseline and the specified time point. Baseline is defined as the last non-missing value prior to the first dose of study drug.

Actual values for Total group is summarized only for baseline and the time points from Long Term Extension (LTE).

EORTC QLQ-C30 is European Organization for Research and Treatment of Cancer Quality of Life Questionnaire-Core 30 Scale. Symptom scales include fatigue, nausea and vomiting, pain, dyspnoea, insomnia, appetite loss, constipation, diarrhoea, and financial difficulties.

Each subscale has a range of 0 - 100%. A high scale score represents a higher response level. Thus a high score for a functional scale represents a high level of functioning but a high score for a symptom scale represents a high level of symptomatology/problem.

Patients were randomized to Danicopan or Placebo for 12 weeks as Treatment Period 1. At Week 12, patients randomized to Placebo were switched to Danicopan for an additional 12 weeks as Treatment Period 2 and patients randomized to Danicopan continued on Danicopan during Treatment Period 2. At the end of the Treatment Period 2 (Week 24), patients entered the Long Term Extension (LTE) Period and continue to receive Danicopan.

D->D: Danicopan at Treatment Period 1 and Danicopan at Treatment Period 2; P->D: Placebo at Treatment Period 1 and Danicopan at Treatment Period 2. Change from baseline is summarized only for patients who have data at baseline and the specified time point.

Baseline is defined as the last non-missing value prior to the first dose of study drug.

Actual values for Total group is summarized only for baseline and the time points from Long Term Extension (LTE).

Patients were randomized to Danicopan or Placebo for 12 weeks as Treatment Period 1. At Week 12, patients randomized to Placebo were switched to Danicopan for an additional 12 weeks as Treatment Period 2 and patients randomized to Danicopan continued on Danicopan during Treatment Period 2. At the end of the Treatment Period 2 (Week 24), patients entered the Long Term Extension (LTE) Period and continue to receive Danicopan.

D->D: Danicopan at Treatment Period 1 and Danicopan at Treatment Period 2; P->D: Placebo at Treatment Period 1 and Danicopan at Treatment Period 2. Change from baseline is summarized only for patients who have data at baseline and the specified time point.

Baseline is defined as the last non-missing value prior to the first dose of study drug.

Actual values for Total group is summarized only for baseline and the time points from Long Term Extension (LTE).

EORTC QLQ-C30 is European Organization for Research and Treatment of Cancer Quality of Life Questionnaire-Core 30 Scale. Symptom scales include fatigue, nausea and vomiting, pain, dyspnoea, insomnia, appetite loss, constipation, diarrhoea, and financial difficulties.

Each subscale has a range of 0 - 100%. A high scale score represents a higher response level. Thus a high score for a functional scale represents a high level of functioning but a high score for a symptom scale represents a high level of symptomatology/problem.

Patients were randomized to Danicopan or Placebo for 12 weeks as Treatment Period 1. At Week 12, patients randomized to Placebo were switched to Danicopan for an additional 12 weeks as Treatment Period 2 and patients randomized to Danicopan continued on Danicopan during Treatment Period 2. EORTC QLQ-C30 is European Organization for Research and Treatment of Cancer Quality of Life Questionnaire-Core 30 Scale. Symptom scales include fatigue, nausea and vomiting, pain, dyspnoea, insomnia, appetite loss, constipation, diarrhoea, and financial difficulties.

Each subscale has a range of 0 - 100%. A high scale score represents a higher response level. Thus a high score for a functional scale represents a high level of functioning but a high score for a symptom scale represents a high level of symptomatology/problem.

Patients were randomized to Danicopan or Placebo for 12 weeks as Treatment Period 1. At Week 12, patients randomized to Placebo were switched to Danicopan for an additional 12 weeks as Treatment Period 2 and patients randomized to Danicopan continued on Danicopan during Treatment Period 2. At the end of the Treatment Period 2 (Week 24), patients entered the Long Term Extension (LTE) Period and continue to receive Danicopan.

D->D: Danicopan at Treatment Period 1 and Danicopan at Treatment Period 2; P->D: Placebo at Treatment Period 1 and Danicopan at Treatment Period 2. Change from baseline is summarized only for patients who have data at baseline and the specified time point.

Baseline is defined as the last non-missing value prior to the first dose of study drug.

Actual values for Total group is summarized only for baseline and the time points from Long Term Extension (LTE).

EORTC QLQ-C30 is European Organization for Research and Treatment of Cancer Quality of Life Questionnaire-Core 30 Scale. Symptom scales include fatigue, nausea and vomiting, pain, dyspnoea, insomnia, appetite loss, constipation, diarrhoea, and financial difficulties.

Each subscale has a range of 0 - 100%. A high scale score represents a higher response level. Thus a high score for a functional scale represents a high level of functioning but a high score for a symptom scale represents a high level of symptomatology/problem.

Patients were randomized to Danicopan or Placebo for 12 weeks as Treatment Period 1. At Week 12, patients randomized to Placebo were switched to Danicopan for an additional 12 weeks as Treatment Period 2 and patients randomized to Danicopan continued on Danicopan during Treatment Period 2. At the end of the Treatment Period 2 (Week 24), patients entered the Long Term Extension (LTE) Period and continue to receive Danicopan.

D->D: Danicopan at Treatment Period 1 and Danicopan at Treatment Period 2; P->D: Placebo at Treatment Period 1 and Danicopan at Treatment Period 2. Change from baseline is summarized only for patients who have data at baseline and the specified time point.

Baseline is defined as the last non-missing value prior to the first dose of study drug.

Actual values for Total group is summarized only for baseline and the time points from Long Term Extension (LTE).

EORTC QLQ-C30 is European Organization for Research and Treatment of Cancer Quality of Life Questionnaire-Core 30 Scale. Symptom scales include fatigue, nausea and vomiting, pain, dyspnoea, insomnia, appetite loss, constipation, diarrhoea, and financial difficulties.

Each subscale has a range of 0 - 100%. A high scale score represents a higher response level. Thus a high score for a functional scale represents a high level of functioning but a high score for a symptom scale represents a high level of symptomatology/problem.

Patients were randomized to Danicopan or Placebo for 12 weeks as Treatment Period 1. At Week 12, patients randomized to Placebo were switched to Danicopan for an additional 12 weeks as Treatment Period 2 and patients randomized to Danicopan continued on Danicopan during Treatment Period 2. At the end of the Treatment Period 2 (Week 24), patients entered the Long Term Extension (LTE) Period and continue to receive Danicopan.

D->D: Danicopan at Treatment Period 1 and Danicopan at Treatment Period 2; P->D: Placebo at Treatment Period 1 and Danicopan at Treatment Period 2.

Change from baseline is summarized only for patients who have data at baseline and the specified time point.

Baseline is defined as the last non-missing value prior to the first dose of study drug.

Actual values for Total group is summarized only for baseline and the time points from Long Term Extension (LTE).

EORTC QLQ-C30 is European Organization for Research and Treatment of Cancer Quality of Life Questionnaire-Core 30 Scale. Symptom scales include fatigue, nausea and vomiting, pain, dyspnoea, insomnia, appetite loss, constipation, diarrhoea, and financial difficulties.

Each subscale has a range of 0 - 100%. A high scale score represents a higher response level. Thus a high score for a functional scale represents a high level of functioning but a high score for a symptom scale represents a high level of symptomatology/problem.

Patients were randomized to Danicopan or Placebo for 12 weeks as Treatment Period 1. At Week 12, patients randomized to Placebo were switched to Danicopan for an additional 12 weeks as Treatment Period 2 and patients randomized to Danicopan continued on Danicopan during Treatment Period 2. At the end of the Treatment Period 2 (Week 24), patients entered the Long Term Extension (LTE) Period and continue to receive Danicopan.

D->D: Danicopan at Treatment Period 1 and Danicopan at Treatment Period 2; P->D: Placebo at Treatment Period 1 and Danicopan at Treatment Period 2. Change from baseline is summarized only for patients who have data at baseline and the specified time point.

Baseline is defined as the last non-missing value prior to the first dose of study drug.

Actual values for Total group is summarized only for baseline and the time points from Long Term Extension (LTE).

Patients were randomized to Danicopan or Placebo for 12 weeks as Treatment Period 1. At Week 12, patients randomized to Placebo were switched to Danicopan for an additional 12 weeks as Treatment Period 2 and patients randomized to Danicopan continued on Danicopan during Treatment Period 2. At the end of the Treatment Period 2 (Week 24), patients entered the Long Term Extension (LTE) Period and continue to receive Danicopan.

D->D: Danicopan at Treatment Period 1 and Danicopan at Treatment Period 2; P->D: Placebo at Treatment Period 1 and Danicopan at Treatment Period 2.

Change from baseline is summarized only for patients who have data at baseline and the specified time point.

Baseline is defined as the last non-missing value prior to the first dose of study drug.

Actual values for Total group is summarized only for baseline and the time points from Long Term Extension (LTE).

EORTC QLQ-C30 is European Organization for Research and Treatment of Cancer Quality of Life Questionnaire-Core 30 Scale. Symptom scales include fatigue, nausea and vomiting, pain, dyspnoea, insomnia, appetite loss, constipation, diarrhoea, and financial difficulties.

Each subscale has a range of 0 - 100%. A high scale score represents a higher response level. Thus a high score for a functional scale represents a high level of functioning but a high score for a symptom scale represents a high level of symptomatology/problem.

Patients were randomized to Danicopan or Placebo for 12 weeks as Treatment Period 1. At Week 12, patients randomized to Placebo were switched to Danicopan for an additional 12 weeks as Treatment Period 2 and patients randomized to Danicopan continued on Danicopan during Treatment Period 2. EORTC QLQ-C30 is European Organization for Research and Treatment of Cancer Quality of Life Questionnaire-Core 30 Scale. Symptom scales include fatigue, nausea and vomiting, pain, dyspnoea, insomnia, appetite loss, constipation, diarrhoea, and financial difficulties.

Each subscale has a range of 0 - 100%. A high scale score represents a higher response level. Thus a high score for a functional scale represents a high level of functioning but a high score for a symptom scale represents a high level of symptomatology/problem.

Patients were randomized to Danicopan or Placebo for 12 weeks as Treatment Period 1. At Week 12, patients randomized to Placebo were switched to Danicopan for an additional 12 weeks as Treatment Period 2 and patients randomized to Danicopan continued on Danicopan during Treatment Period 2. At the end of the Treatment Period 2 (Week 24), patients entered the Long Term Extension (LTE) Period and continue to receive Danicopan.

D->D: Danicopan at Treatment Period 1 and Danicopan at Treatment Period 2; P->D: Placebo at Treatment Period 1 and Danicopan at Treatment Period 2.

Change from baseline is summarized only for patients who have data at baseline and the specified time point.

Baseline is defined as the last non-missing value prior to the first dose of study drug.

Actual values for Total group is summarized only for baseline and the time points from Long Term Extension (LTE).

EORTC QLQ-C30 is European Organization for Research and Treatment of Cancer Quality of Life Questionnaire-Core 30 Scale. Symptom scales include fatigue, nausea and vomiting, pain, dyspnoea, insomnia, appetite loss, constipation, diarrhoea, and financial difficulties.

Each subscale has a range of 0 - 100%. A high scale score represents a higher response level. Thus a high score for a functional scale represents a high level of functioning but a high score for a symptom scale represents a high level of symptomatology/problem.

Patients were randomized to Danicopan or Placebo for 12 weeks as Treatment Period 1. At Week 12, patients randomized to Placebo were switched to Danicopan for an additional 12 weeks as Treatment Period 2 and patients randomized to Danicopan continued on Danicopan during Treatment Period 2. At the end of the Treatment Period 2 (Week 24), patients entered the Long Term Extension (LTE) Period and continue to receive Danicopan.

D->D: Danicopan at Treatment Period 1 and Danicopan at Treatment Period 2; P->D: Placebo at Treatment Period 1 and Danicopan at Treatment Period 2.

Change from baseline is summarized only for patients who have data at baseline and the specified time point.

Baseline is defined as the last non-missing value prior to the first dose of study drug.

Actual values for Total group is summarized only for baseline and the time points from Long Term Extension (LTE).

EORTC QLQ-C30 is European Organization for Research and Treatment of Cancer Quality of Life Questionnaire-Core 30 Scale. Symptom scales include fatigue, nausea and vomiting, pain, dyspnoea, insomnia, appetite loss, constipation, diarrhoea, and financial difficulties.

Each subscale has a range of 0 - 100%. A high scale score represents a higher response level. Thus a high score for a functional scale represents a high level of functioning but a high score for a symptom scale represents a high level of symptomatology/problem.

Patients were randomized to Danicopan or Placebo for 12 weeks as Treatment Period 1. At Week 12, patients randomized to Placebo were switched to Danicopan for an additional 12 weeks as Treatment Period 2 and patients randomized to Danicopan continued on Danicopan during Treatment Period 2. At the end of the Treatment Period 2 (Week 24), patients entered the Long Term Extension (LTE) Period and continue to receive Danicopan.

D->D: Danicopan at Treatment Period 1 and Danicopan at Treatment Period 2; P->D: Placebo at Treatment Period 1 and Danicopan at Treatment Period 2. Change from baseline is summarized only for patients who have data at baseline and the specified time point.

Baseline is defined as the last non-missing value prior to the first dose of study drug.

Actual values for Total group is summarized only for baseline and the time points from Long Term Extension (LTE).

EORTC QLQ-C30 is European Organization for Research and Treatment of Cancer Quality of Life Questionnaire-Core 30 Scale. Symptom scales include fatigue, nausea and vomiting, pain, dyspnoea, insomnia, appetite loss, constipation, diarrhoea, and financial difficulties. Each subscale has a range of 0 - 100%. A high scale score represents a higher response level. Thus a high score for a functional scale represents a high level of functioning but a high score for a symptom scale represents a high level of symptomatology/problem. Patients were randomized to Danicopan or Placebo for 12 weeks as Treatment Period 1. At Week 12, patients randomized to Placebo were switched to Danicopan for an additional 12 weeks as Treatment Period 2 and patients randomized to Danicopan continued on Danicopan during Treatment Period 2. At the end of the Treatment Period 2 (Week 24), patients entered the Long Term Extension (LTE) Period and continue to receive Danicopan. D->D: Danicopan at Treatment Period 1 and Danicopan at Treatment Period 2; P->D: Placebo at Treatment Period 1 and Danicopan at Treatment Period 2. Change from baseline is summarized only for patients who have data at baseline and the specified time point. Baseline is defined as the last non-missing value prior to the first dose of study drug.

Actual values for Total group is summarized only for baseline and the time points from Long Term Extension (LTE).

EORTC QLQ-C30 is European Organization for Research and Treatment of Cancer Quality of Life Questionnaire-Core 30 Scale. Symptom scales include fatigue, nausea and vomiting, pain, dyspnoea, insomnia, appetite loss, constipation, diarrhoea, and financial difficulties.

Each subscale has a range of 0 - 100%. A high scale score represents a higher response level. Thus a high score for a functional scale represents a high level of functioning but a high score for a symptom scale represents a high level of symptomatology/problem.

Patients were randomized to Danicopan or Placebo for 12 weeks as Treatment Period 1. At Week 12, patients randomized to Placebo were switched to Danicopan for an additional 12 weeks as Treatment Period 2 and patients randomized to Danicopan continued on Danicopan during Treatment Period 2. At the end of the Treatment Period 2 (Week 24), patients entered the Long Term Extension (LTE) Period and continue to receive Danicopan.

D->D: Danicopan at Treatment Period 1 and Danicopan at Treatment Period 2; P->D: Placebo at Treatment Period 1 and Danicopan at Treatment Period 2. Change from baseline is summarized only for patients who have data at baseline and the specified time point.

Baseline is defined as the last non-missing value prior to the first dose of study drug.

Actual values for Total group is summarized only for baseline and the time points from Long Term Extension (LTE).

EORTC QLQ-C30 is European Organization for Research and Treatment of Cancer Quality of Life Questionnaire-Core 30 Scale. Symptom scales include fatigue, nausea and vomiting, pain, dyspnoea, insomnia, appetite loss, constipation, diarrhoea, and financial difficulties. Each subscale has a range of 0 - 100%. A high scale score represents a higher response level. Thus a high score for a functional scale represents a high level of functioning but a high score for a symptom scale represents a high level of symptomatology/problem. Patients were randomized to Danicopan or Placebo for 12 weeks as Treatment Period 1. At Week 12, patients randomized to Placebo were switched to Danicopan for an additional 12 weeks as Treatment Period 2 and patients randomized to Danicopan continued on Danicopan during Treatment Period 2. At the end of the Treatment Period 2 (Week 24), patients entered the Long Term Extension (LTE) Period and continue to receive Danicopan. D->D: Danicopan at Treatment Period 1 and Danicopan at Treatment Period 2; P->D: Placebo at Treatment Period 1 and Danicopan at Treatment Period 2. Change from baseline is summarized only for patients who have data at baseline and the specified time point. Baseline is defined as the last non-missing value prior to the first dose of study drug. Actual values for Total group is summarized only for baseline and the time points from Long Term Extension (LTE).

EORTC QLQ-C30 is European Organization for Research and Treatment of Cancer Quality of Life Questionnaire-Core 30 Scale. Symptom scales include fatigue, nausea and vomiting, pain, dyspnoea, insomnia, appetite loss, constipation, diarrhoea, and financial difficulties.

Each subscale has a range of 0 - 100%. A high scale score represents a higher response level. Thus a high score for a functional scale represents a high level of functioning but a high score for a symptom scale represents a high level of symptomatology/problem.

Patients were randomized to Danicopan or Placebo for 12 weeks as Treatment Period 1. At Week 12, patients randomized to Placebo were switched to Danicopan for an additional 12 weeks as Treatment Period 2 and patients randomized to Danicopan continued on Danicopan during Treatment Period 2. At the end of the Treatment Period 2 (Week 24), patients entered the Long Term Extension (LTE) Period and continue to receive Danicopan.

D->D: Danicopan at Treatment Period 1 and Danicopan at Treatment Period 2; P->D: Placebo at Treatment Period 1 and Danicopan at Treatment Period 2. Change from baseline is summarized only for patients who have data at baseline and the specified time point.

Baseline is defined as the last non-missing value prior to the first dose of study drug.

Actual values for Total group is summarized only for baseline and the time points from Long Term Extension (LTE).

EORTC QLQ-C30 is European Organization for Research and Treatment of Cancer Quality of Life Questionnaire-Core 30 Scale. Symptom scales include fatigue, nausea and vomiting, pain, dyspnoea, insomnia, appetite loss, constipation, diarrhoea, and financial difficulties.

Each subscale has a range of 0 - 100%. A high scale score represents a higher response level. Thus a high score for a functional scale represents a high level of functioning but a high score for a symptom scale represents a high level of symptomatology/problem.

Patients were randomized to Danicopan or Placebo for 12 weeks as Treatment Period 1. At Week 12, patients randomized to Placebo were switched to Danicopan for an additional 12 weeks as Treatment Period 2 and patients randomized to Danicopan continued on Danicopan during Treatment Period 2. At the end of the Treatment Period 2 (Week 24), patients entered the Long Term Extension (LTE) Period and continue to receive Danicopan.

D->D: Danicopan at Treatment Period 1 and Danicopan at Treatment Period 2; P->D: Placebo at Treatment Period 1 and Danicopan at Treatment Period 2.

Change from baseline is summarized only for patients who have data at baseline and the specified time point.

Baseline is defined as the last non-missing value prior to the first dose of study drug.

Actual values for Total group is summarized only for baseline and the time points from Long Term Extension (LTE).

EORTC QLQ-C30 is European Organization for Research and Treatment of Cancer Quality of Life Questionnaire-Core 30 Scale. Symptom scales include fatigue, nausea and vomiting, pain, dyspnoea, insomnia, appetite loss, constipation, diarrhoea, and financial difficulties. Each subscale has a range of 0 - 100%. A high scale score represents a higher response level. Thus a high score for a functional scale represents a high level of functioning but a high score for a symptom scale represents a high level of symptomatology/problem. Patients were randomized to Danicopan or Placebo for 12 weeks as Treatment Period 1. At Week 12, patients randomized to Placebo were switched to Danicopan for an additional 12 weeks as Treatment Period 2 and patients randomized to Danicopan continued on Danicopan during Treatment Period 2. At the end of the Treatment Period 2 (Week 24), patients entered the Long Term Extension (LTE) Period and continue to receive Danicopan. D->D: Danicopan at Treatment Period 1 and Danicopan at Treatment Period 2; P->D: Placebo at Treatment Period 1 and Danicopan at Treatment Period 2. Change from baseline is summarized only for patients who have data at baseline and the specified time point. Baseline is defined as the last non-missing value prior to the first dose of study drug.

Actual values for Total group is summarized only for baseline and the time points from Long Term Extension (LTE).

EORTC QLQ-C30 is European Organization for Research and Treatment of Cancer Quality of Life Questionnaire-Core 30 Scale. Symptom scales include fatigue, nausea and vomiting, pain, dyspnoea, insomnia, appetite loss, constipation, diarrhoea, and financial difficulties.

Each subscale has a range of 0 - 100%. A high scale score represents a higher response level. Thus a high score for a functional scale represents a high level of functioning but a high score for a symptom scale represents a high level of symptomatology/problem.

Patients were randomized to Danicopan or Placebo for 12 weeks as Treatment Period 1. At Week 12, patients randomized to Placebo were switched to Danicopan for an additional 12 weeks as Treatment Period 2 and patients randomized to Danicopan continued on Danicopan during Treatment Period 2. At the end of the Treatment Period 2 (Week 24), patients entered the Long Term Extension (LTE) Period and continue to receive Danicopan.

D->D: Danicopan at Treatment Period 1 and Danicopan at Treatment Period 2; P->D: Placebo at Treatment Period 1 and Danicopan at Treatment Period 2. Change from baseline is summarized only for patients who have data at baseline and the specified time point.

Baseline is defined as the last non-missing value prior to the first dose of study drug.

Actual values for Total group is summarized only for baseline and the time points from Long Term Extension (LTE).

EORTC QLQ-C30 is European Organization for Research and Treatment of Cancer Quality of Life Questionnaire-Core 30 Scale. Symptom scales include fatigue, nausea and vomiting, pain, dyspnoea, insomnia, appetite loss, constipation, diarrhoea, and financial difficulties.

Each subscale has a range of 0 - 100%. A high scale score represents a higher response level. Thus a high score for a functional scale represents a high level of functioning but a high score for a symptom scale represents a high level of symptomatology/problem.

Patients were randomized to Danicopan or Placebo for 12 weeks as Treatment Period 1. At Week 12, patients randomized to Placebo were switched to Danicopan for an additional 12 weeks as Treatment Period 2 and patients randomized to Danicopan continued on Danicopan during Treatment Period 2. At the end of the Treatment Period 2 (Week 24), patients entered the Long Term Extension (LTE) Period and continue to receive Danicopan.

D->D: Danicopan at Treatment Period 1 and Danicopan at Treatment Period 2; P->D: Placebo at Treatment Period 1 and Danicopan at Treatment Period 2. Change from baseline is summarized only for patients who have data at baseline and the specified time point.

Baseline is defined as the last non-missing value prior to the first dose of study drug.

Actual values for Total group is summarized only for baseline and the time points from Long Term Extension (LTE).

EORTC QLQ-C30 is European Organization for Research and Treatment of Cancer Quality of Life Questionnaire-Core 30 Scale. Symptom scales include fatigue, nausea and vomiting, pain, dyspnoea, insomnia, appetite loss, constipation, diarrhoea, and financial difficulties.

Each subscale has a range of 0 - 100%. A high scale score represents a higher response level. Thus a high score for a functional scale represents a high level of functioning but a high score for a symptom scale represents a high level of symptomatology/problem.

Patients were randomized to Danicopan or Placebo for 12 weeks as Treatment Period 1. At Week 12, patients randomized to Placebo were switched to Danicopan for an additional 12 weeks as Treatment Period 2 and patients randomized to Danicopan continued on Danicopan during Treatment Period 2. At the end of the Treatment Period 2 (Week 24), patients entered the Long Term Extension (LTE) Period and continue to receive Danicopan.

D->D: Danicopan at Treatment Period 1 and Danicopan at Treatment Period 2; P->D: Placebo at Treatment Period 1 and Danicopan at Treatment Period 2. Change from baseline is summarized only for patients who have data at baseline and the specified time point.

Baseline is defined as the last non-missing value prior to the first dose of study drug.

Actual values for Total group is summarized only for baseline and the time points from Long Term Extension (LTE).

Patients were randomized to Danicopan or Placebo for 12 weeks as Treatment Period 1. At Week 12, patients randomized to Placebo were switched to Danicopan for an additional 12 weeks as Treatment Period 2 and patients randomized to Danicopan continued on Danicopan during Treatment Period 2. At the end of the Treatment Period 2 (Week 24), patients entered the Long Term Extension (LTE) Period and continue to receive Danicopan.

D->D: Danicopan at Treatment Period 1 and Danicopan at Treatment Period 2; P->D: Placebo at Treatment Period 1 and Danicopan at Treatment Period 2. Change from baseline is summarized only for patients who have data at baseline and the specified time point.

Baseline is defined as the last non-missing value prior to the first dose of study drug.

Actual values for Total group is summarized only for baseline and the time points from Long Term Extension (LTE).

EORTC QLQ-C30 is European Organization for Research and Treatment of Cancer Quality of Life Questionnaire-Core 30 Scale. Symptom scales include fatigue, nausea and vomiting, pain, dyspnoea, insomnia, appetite loss, constipation, diarrhoea, and financial difficulties.

Each subscale has a range of 0 - 100%. A high scale score represents a higher response level. Thus a high score for a functional scale represents a high level of functioning but a high score for a symptom scale represents a high level of symptomatology/problem.

Patients were randomized to Danicopan or Placebo for 12 weeks as Treatment Period 1. At Week 12, patients randomized to Placebo were switched to Danicopan for an additional 12 weeks as Treatment Period 2 and patients randomized to Danicopan continued on Danicopan during Treatment Period 2. EORTC QLQ-C30 is European Organization for Research and Treatment of Cancer Quality of Life Questionnaire-Core 30 Scale. Symptom scales include fatigue, nausea and vomiting, pain, dyspnoea, insomnia, appetite loss, constipation, diarrhoea, and financial difficulties.

Each subscale has a range of 0 - 100%. A high scale score represents a higher response level. Thus a high score for a functional scale represents a high level of functioning but a high score for a symptom scale represents a high level of symptomatology/problem.

Patients were randomized to Danicopan or Placebo for 12 weeks as Treatment Period 1. At Week 12, patients randomized to Placebo were switched to Danicopan for an additional 12 weeks as Treatment Period 2 and patients randomized to Danicopan continued on Danicopan during Treatment Period 2. At the end of the Treatment Period 2 (Week 24), patients entered the Long Term Extension (LTE) Period and continue to receive Danicopan.

D->D: Danicopan at Treatment Period 1 and Danicopan at Treatment Period 2; P->D: Placebo at Treatment Period 1 and Danicopan at Treatment Period 2.

Change from baseline is summarized only for patients who have data at baseline and the specified time point.

Baseline is defined as the last non-missing value prior to the first dose of study drug.

Actual values for Total group is summarized only for baseline and the time points from Long Term Extension (LTE).

Mean (SD)	33.80 (26.513)	-11.11 (20.198)	39.51 (19.334)	-9.72 (16.197)		
Median	33.33	-5.56	33.33	-5.56		
Min, Max	0.0, 100.0	-55.6, 22.2	11.1, 66.7	-33.3, 11.1		

EORTC QLQ-C30 is European Organization for Research and Treatment of Cancer Quality of Life Questionnaire-Core 30 Scale. Symptom scales include fatigue, nausea and vomiting, pain, dyspnoea, insomnia, appetite loss, constipation, diarrhoea, and financial difficulties.

Each subscale has a range of 0 - 100%. A high scale score represents a higher response level. Thus a high score for a functional scale represents a high level of functioning but a high score for a symptom scale represents a high level of symptomatology/problem.

Patients were randomized to Danicopan or Placebo for 12 weeks as Treatment Period 1. At Week 12, patients randomized to Placebo were switched to Danicopan for an additional 12 weeks as Treatment Period 2 and patients randomized to Danicopan continued on Danicopan during Treatment Period 2. At the end of the Treatment Period 2 (Week 24), patients entered the Long Term Extension (LTE) Period and continue to receive Danicopan.

D->D: Danicopan at Treatment Period 1 and Danicopan at Treatment Period 2; P->D: Placebo at Treatment Period 1 and Danicopan at Treatment Period 2.

Change from baseline is summarized only for patients who have data at baseline and the specified time point.

Baseline is defined as the last non-missing value prior to the first dose of study drug.

Actual values for Total group is summarized only for baseline and the time points from Long Term Extension (LTE).

EORTC QLQ-C30 is European Organization for Research and Treatment of Cancer Quality of Life Questionnaire-Core 30 Scale. Symptom scales include fatigue, nausea and vomiting, pain, dyspnoea, insomnia, appetite loss, constipation, diarrhoea, and financial difficulties.

Each subscale has a range of 0 - 100%. A high scale score represents a higher response level. Thus a high score for a functional scale represents a high level of functioning but a high score for a symptom scale represents a high level of symptomatology/problem.

Patients were randomized to Danicopan or Placebo for 12 weeks as Treatment Period 1. At Week 12, patients randomized to Placebo were switched to Danicopan for an additional 12 weeks as Treatment Period 2 and patients randomized to Danicopan continued on Danicopan during Treatment Period 2. At the end of the Treatment Period 2 (Week 24), patients entered the Long Term Extension (LTE) Period and continue to receive Danicopan.

D->D: Danicopan at Treatment Period 1 and Danicopan at Treatment Period 2; P->D: Placebo at Treatment Period 1 and Danicopan at Treatment Period 2.

Change from baseline is summarized only for patients who have data at baseline and the specified time point.

Baseline is defined as the last non-missing value prior to the first dose of study drug.

Actual values for Total group is summarized only for baseline and the time points from Long Term Extension (LTE).

EORTC QLQ-C30 is European Organization for Research and Treatment of Cancer Quality of Life Questionnaire-Core 30 Scale. Symptom scales include fatigue, nausea and vomiting, pain, dyspnoea, insomnia, appetite loss, constipation, diarrhoea, and financial difficulties.

Each subscale has a range of 0 - 100%. A high scale score represents a higher response level. Thus a high score for a functional scale represents a high level of functioning but a high score for a symptom scale represents a high level of symptomatology/problem.

Patients were randomized to Danicopan or Placebo for 12 weeks as Treatment Period 1. At Week 12, patients randomized to Placebo were switched to Danicopan for an additional 12 weeks as Treatment Period 2 and patients randomized to Danicopan continued on Danicopan during Treatment Period 2. At the end of the Treatment Period 2 (Week 24), patients entered the Long Term Extension (LTE) Period and continue to receive Danicopan.

D->D: Danicopan at Treatment Period 1 and Danicopan at Treatment Period 2; P->D: Placebo at Treatment Period 1 and Danicopan at Treatment Period 2. Change from baseline is summarized only for patients who have data at baseline and the specified time point.

Baseline is defined as the last non-missing value prior to the first dose of study drug.

Actual values for Total group is summarized only for baseline and the time points from Long Term Extension (LTE).

EORTC QLQ-C30 is European Organization for Research and Treatment of Cancer Quality of Life Questionnaire-Core 30 Scale. Symptom scales include fatigue, nausea and vomiting, pain, dyspnoea, insomnia, appetite loss, constipation, diarrhoea, and financial difficulties.

Each subscale has a range of 0 - 100%. A high scale score represents a higher response level. Thus a high score for a functional scale represents a high level of functioning but a high score for a symptom scale represents a high level of symptomatology/problem.

Patients were randomized to Danicopan or Placebo for 12 weeks as Treatment Period 1. At Week 12, patients randomized to Placebo were switched to Danicopan for an additional 12 weeks as Treatment Period 2 and patients randomized to Danicopan continued on Danicopan during Treatment Period 2. At the end of the Treatment Period 2 (Week 24), patients entered the Long Term Extension (LTE) Period and continue to receive Danicopan.

D->D: Danicopan at Treatment Period 1 and Danicopan at Treatment Period 2; P->D: Placebo at Treatment Period 1 and Danicopan at Treatment Period 2.

Change from baseline is summarized only for patients who have data at baseline and the specified time point.

Baseline is defined as the last non-missing value prior to the first dose of study drug.

Actual values for Total group is summarized only for baseline and the time points from Long Term Extension (LTE).

EORTC QLQ-C30 is European Organization for Research and Treatment of Cancer Quality of Life Questionnaire-Core 30 Scale. Symptom scales include fatigue, nausea and vomiting, pain, dyspnoea, insomnia, appetite loss, constipation, diarrhoea, and financial difficulties.

Each subscale has a range of 0 - 100%. A high scale score represents a higher response level. Thus a high score for a functional scale represents a high level of functioning but a high score for a symptom scale represents a high level of symptomatology/problem.

Patients were randomized to Danicopan or Placebo for 12 weeks as Treatment Period 1. At Week 12, patients randomized to Placebo were switched to Danicopan for an additional 12 weeks as Treatment Period 2 and patients randomized to Danicopan continued on Danicopan during Treatment Period 2. At the end of the Treatment Period 2 (Week 24), patients entered the Long Term Extension (LTE) Period and continue to receive Danicopan.

D->D: Danicopan at Treatment Period 1 and Danicopan at Treatment Period 2; P->D: Placebo at Treatment Period 1 and Danicopan at Treatment Period 2. Change from baseline is summarized only for patients who have data at baseline and the specified time point.

Baseline is defined as the last non-missing value prior to the first dose of study drug.

Actual values for Total group is summarized only for baseline and the time points from Long Term Extension (LTE).

EORTC QLQ-C30 is European Organization for Research and Treatment of Cancer Quality of Life Questionnaire-Core 30 Scale. Symptom scales include fatigue, nausea and vomiting, pain, dyspnoea, insomnia, appetite loss, constipation, diarrhoea, and financial difficulties.

Each subscale has a range of 0 - 100%. A high scale score represents a higher response level. Thus a high score for a functional scale represents a high level of functioning but a high score for a symptom scale represents a high level of symptomatology/problem.

Patients were randomized to Danicopan or Placebo for 12 weeks as Treatment Period 1. At Week 12, patients randomized to Placebo were switched to Danicopan for an additional 12 weeks as Treatment Period 2 and patients randomized to Danicopan continued on Danicopan during Treatment Period 2. At the end of the Treatment Period 2 (Week 24), patients entered the Long Term Extension (LTE) Period and continue to receive Danicopan.

D->D: Danicopan at Treatment Period 1 and Danicopan at Treatment Period 2; P->D: Placebo at Treatment Period 1 and Danicopan at Treatment Period 2.

Change from baseline is summarized only for patients who have data at baseline and the specified time point.

Baseline is defined as the last non-missing value prior to the first dose of study drug.

Actual values for Total group is summarized only for baseline and the time points from Long Term Extension (LTE).

EORTC QLQ-C30 is European Organization for Research and Treatment of Cancer Quality of Life Questionnaire-Core 30 Scale. Symptom scales include fatigue, nausea and vomiting, pain, dyspnoea, insomnia, appetite loss, constipation, diarrhoea, and financial difficulties.

Each subscale has a range of 0 - 100%. A high scale score represents a higher response level. Thus a high score for a functional scale represents a high level of functioning but a high score for a symptom scale represents a high level of symptomatology/problem.

Patients were randomized to Danicopan or Placebo for 12 weeks as Treatment Period 1. At Week 12, patients randomized to Placebo were switched to Danicopan for an additional 12 weeks as Treatment Period 2 and patients randomized to Danicopan continued on Danicopan during Treatment Period 2. At the end of the Treatment Period 2 (Week 24), patients entered the Long Term Extension (LTE) Period and continue to receive Danicopan.

D->D: Danicopan at Treatment Period 1 and Danicopan at Treatment Period 2; P->D: Placebo at Treatment Period 1 and Danicopan at Treatment Period 2.

Change from baseline is summarized only for patients who have data at baseline and the specified time point.

Baseline is defined as the last non-missing value prior to the first dose of study drug.

Actual values for Total group is summarized only for baseline and the time points from Long Term Extension (LTE).

EORTC QLQ-C30 is European Organization for Research and Treatment of Cancer Quality of Life Questionnaire-Core 30 Scale. Symptom scales include fatigue, nausea and vomiting, pain, dyspnoea, insomnia, appetite loss, constipation, diarrhoea, and financial difficulties.

Each subscale has a range of 0 - 100%. A high scale score represents a higher response level. Thus a high score for a functional scale represents a high level of functioning but a high score for a symptom scale represents a high level of symptomatology/problem.

Patients were randomized to Danicopan or Placebo for 12 weeks as Treatment Period 1. At Week 12, patients randomized to Placebo were switched to Danicopan for an additional 12 weeks as Treatment Period 2 and patients randomized to Danicopan continued on Danicopan during Treatment Period 2. At the end of the Treatment Period 2 (Week 24), patients entered the Long Term Extension (LTE) Period and continue to receive Danicopan.

D->D: Danicopan at Treatment Period 1 and Danicopan at Treatment Period 2; P->D: Placebo at Treatment Period 1 and Danicopan at Treatment Period 2.

Change from baseline is summarized only for patients who have data at baseline and the specified time point.

Baseline is defined as the last non-missing value prior to the first dose of study drug.

Actual values for Total group is summarized only for baseline and the time points from Long Term Extension (LTE).

EORTC QLQ-C30 is European Organization for Research and Treatment of Cancer Quality of Life Questionnaire-Core 30 Scale. Symptom scales include fatigue, nausea and vomiting, pain, dyspnoea, insomnia, appetite loss, constipation, diarrhoea, and financial difficulties.

Each subscale has a range of 0 - 100%. A high scale score represents a higher response level. Thus a high score for a functional scale represents a high level of functioning but a high score for a symptom scale represents a high level of symptomatology/problem.

Patients were randomized to Danicopan or Placebo for 12 weeks as Treatment Period 1. At Week 12, patients randomized to Placebo were switched to Danicopan for an additional 12 weeks as Treatment Period 2 and patients randomized to Danicopan continued on Danicopan during Treatment Period 2. At the end of the Treatment Period 2 (Week 24), patients entered the Long Term Extension (LTE) Period and continue to receive Danicopan.

D->D: Danicopan at Treatment Period 1 and Danicopan at Treatment Period 2; P->D: Placebo at Treatment Period 1 and Danicopan at Treatment Period 2.

Change from baseline is summarized only for patients who have data at baseline and the specified time point.

Baseline is defined as the last non-missing value prior to the first dose of study drug.

Actual values for Total group is summarized only for baseline and the time points from Long Term Extension (LTE).

Change from baseline is summarized only for patients who have data at baseline and the specified time point.

Baseline is defined as the last non-missing value prior to the first dose of study drug.

Actual values for Total group is summarized only for baseline and the time points from Long Term Extension (LTE).

EORTC QLQ-C30 is European Organization for Research and Treatment of Cancer Quality of Life Questionnaire-Core 30 Scale. Symptom scales include fatigue, nausea and vomiting, pain, dyspnoea, insomnia, appetite loss, constipation, diarrhoea, and financial difficulties.

Each subscale has a range of 0 - 100%. A high scale score represents a higher response level. Thus a high score for a functional scale represents a high level of functioning but a high score for a symptom scale represents a high level of symptomatology/problem.

Patients were randomized to Danicopan or Placebo for 12 weeks as Treatment Period 1. At Week 12, patients randomized to Placebo were switched to Danicopan for an additional 12 weeks as Treatment Period 2 and patients randomized to Danicopan continued on Danicopan during Treatment Period 2. At the end of the Treatment Period 2 (Week 24), patients entered the Long Term Extension (LTE) Period and continue to receive Danicopan.

D->D: Danicopan at Treatment Period 1 and Danicopan at Treatment Period 2; P->D: Placebo at Treatment Period 1 and Danicopan at Treatment Period 2. Change from baseline is summarized only for patients who have data at baseline and the specified time point.

Baseline is defined as the last non-missing value prior to the first dose of study drug.

Actual values for Total group is summarized only for baseline and the time points from Long Term Extension (LTE).

EORTC QLQ-C30 is European Organization for Research and Treatment of Cancer Quality of Life Questionnaire-Core 30 Scale. Symptom scales include fatigue, nausea and vomiting, pain, dyspnoea, insomnia, appetite loss, constipation, diarrhoea, and financial difficulties.

Each subscale has a range of 0 - 100%. A high scale score represents a higher response level. Thus a high score for a functional scale represents a high level of functioning but a high score for a symptom scale represents a high level of symptomatology/problem.

Patients were randomized to Danicopan or Placebo for 12 weeks as Treatment Period 1. At Week 12, patients randomized to Placebo were switched to Danicopan for an additional 12 weeks as Treatment Period 2 and patients randomized to Danicopan continued on Danicopan during Treatment Period 2. At the end of the Treatment Period 2 (Week 24), patients entered the Long Term Extension (LTE) Period and continue to receive Danicopan.

D->D: Danicopan at Treatment Period 1 and Danicopan at Treatment Period 2; P->D: Placebo at Treatment Period 1 and Danicopan at Treatment Period 2. Change from baseline is summarized only for patients who have data at baseline and the specified time point.

Baseline is defined as the last non-missing value prior to the first dose of study drug.

Actual values for Total group is summarized only for baseline and the time points from Long Term Extension (LTE).

EORTC QLQ-C30 is European Organization for Research and Treatment of Cancer Quality of Life Questionnaire-Core 30 Scale. Symptom scales include fatigue, nausea and vomiting, pain, dyspnoea, insomnia, appetite loss, constipation, diarrhoea, and financial difficulties.

Each subscale has a range of 0 - 100%. A high scale score represents a higher response level. Thus a high score for a functional scale represents a high level of functioning but a high score for a symptom scale represents a high level of symptomatology/problem.

Patients were randomized to Danicopan or Placebo for 12 weeks as Treatment Period 1. At Week 12, patients randomized to Placebo were switched to Danicopan for an additional 12 weeks as Treatment Period 2 and patients randomized to Danicopan continued on Danicopan during Treatment Period 2. At the end of the Treatment Period 2 (Week 24), patients entered the Long Term Extension (LTE) Period and continue to receive Danicopan.

D->D: Danicopan at Treatment Period 1 and Danicopan at Treatment Period 2; P->D: Placebo at Treatment Period 1 and Danicopan at Treatment Period 2. Change from baseline is summarized only for patients who have data at baseline and the specified time point.

Baseline is defined as the last non-missing value prior to the first dose of study drug.

Actual values for Total group is summarized only for baseline and the time points from Long Term Extension (LTE).

Each subscale has a range of 0 - 100%. A high scale score represents a higher response level. Thus a high score for a functional scale represents a high level of functioning but a high score for a symptom scale represents a high level of symptomatology/problem.

Patients were randomized to Danicopan or Placebo for 12 weeks as Treatment Period 1. At Week 12, patients randomized to Placebo were switched to Danicopan for an additional 12 weeks as Treatment Period 2 and patients randomized to Danicopan continued on Danicopan during Treatment Period 2. At the end of the Treatment Period 2 (Week 24), patients entered the Long Term Extension (LTE) Period and continue to receive Danicopan.

D->D: Danicopan at Treatment Period 1 and Danicopan at Treatment Period 2; P->D: Placebo at Treatment Period 1 and Danicopan at Treatment Period 2.

Change from baseline is summarized only for patients who have data at baseline and the specified time point.

Baseline is defined as the last non-missing value prior to the first dose of study drug.

Actual values for Total group is summarized only for baseline and the time points from Long Term Extension (LTE).

Table GERMANY.2.5.4.6

Summary of Actual Values and Change from Baseline in EORTC QLQ-C30 Scores Symptom Scales During Treatment Period 1 and Period 2 and Long Term Extension by the Randomization Stratification Factors of Screening Hgb Level (< 8.5 and ≥ 8.5 g/dL)
Modified Randomized Set

Fatigue

Screening Hgb Level < 8.5 g/dL

Visit/Statistics	D->D (N=35)		P->D (N=15)		Total (N=50)	
	Actual Value	Change from Baseline	Actual Value	Change from Baseline	Actual Value	Change from Baseline
Baseline						
n	35		15		50	
Mean (SD)	46.35 (23.413)		47.41 (27.043)		46.67 (24.281)	
Median	33.33		44.44		38.89	
Min, Max	0.0, 100.0		0.0, 100.0		0.0, 100.0	
Week 2						
n	33	33	15	15		
Mean (SD)	33.33 (21.337)	-13.80 (22.572)	42.96 (17.247)	-4.44 (20.914)		
Median	33.33	-11.11	33.33	0.00		
Min, Max	0.0, 88.9	-66.7, 33.3	11.1, 66.7	-44.4, 33.3		

EORTC QLQ-C30 is European Organization for Research and Treatment of Cancer Quality of Life Questionnaire-Core 30 Scale. Symptom scales include fatigue, nausea and vomiting, pain, dyspnoea, insomnia, appetite loss, constipation, diarrhoea, and financial difficulties.

Each subscale has a range of 0 - 100%. A high scale score represents a higher response level. Thus a high score for a functional scale represents a high level of functioning but a high score for a symptom scale represents a high level of symptomatology/problem.

Patients were randomized to Danicopan or Placebo for 12 weeks as Treatment Period 1. At Week 12, patients randomized to Placebo were switched to Danicopan for an additional 12 weeks as Treatment Period 2 and patients randomized to Danicopan continued on Danicopan during Treatment Period 2. At the end of the Treatment Period 2 (Week 24), patients entered the Long Term Extension (LTE) Period and continue to receive Danicopan.

D->D: Danicopan at Treatment Period 1 and Danicopan at Treatment Period 2; P->D: Placebo at Treatment Period 1 and Danicopan at Treatment Period 2.

Change from baseline is summarized only for patients who have data at baseline and the specified time point.

Baseline is defined as the last non-missing value prior to the first dose of study drug.

Actual values for Total group is summarized only for baseline and the time points from Long Term Extension (LTE).

EORTC QLQ-C30 is European Organization for Research and Treatment of Cancer Quality of Life Questionnaire-Core 30 Scale. Symptom scales include fatigue, nausea and vomiting, pain, dyspnoea, insomnia, appetite loss, constipation, diarrhoea, and financial difficulties.

Each subscale has a range of 0 - 100%. A high scale score represents a higher response level. Thus a high score for a functional scale represents a high level of functioning but a high score for a symptom scale represents a high level of symptomatology/problem.

Patients were randomized to Danicopan or Placebo for 12 weeks as Treatment Period 1. At Week 12, patients randomized to Placebo were switched to Danicopan for an additional 12 weeks as Treatment Period 2 and patients randomized to Danicopan continued on Danicopan during Treatment Period 2. At the end of the Treatment Period 2 (Week 24), patients entered the Long Term Extension (LTE) Period and continue to receive Danicopan.

D->D: Danicopan at Treatment Period 1 and Danicopan at Treatment Period 2; P->D: Placebo at Treatment Period 1 and Danicopan at Treatment Period 2.

Change from baseline is summarized only for patients who have data at baseline and the specified time point.

Baseline is defined as the last non-missing value prior to the first dose of study drug.

Actual values for Total group is summarized only for baseline and the time points from Long Term Extension (LTE).

EORTC QLQ-C30 is European Organization for Research and Treatment of Cancer Quality of Life Questionnaire-Core 30 Scale. Symptom scales include fatigue, nausea and vomiting, pain, dyspnoea, insomnia, appetite loss, constipation, diarrhoea, and financial difficulties.

Each subscale has a range of 0 - 100%. A high scale score represents a higher response level. Thus a high score for a functional scale represents a high level of functioning but a high score for a symptom scale represents a high level of symptomatology/problem.

Patients were randomized to Danicopan or Placebo for 12 weeks as Treatment Period 1. At Week 12, patients randomized to Placebo were switched to Danicopan for an additional 12 weeks as Treatment Period 2 and patients randomized to Danicopan continued on Danicopan during Treatment Period 2. At the end of the Treatment Period 2 (Week 24), patients entered the Long Term Extension (LTE) Period and continue to receive Danicopan.

D->D: Danicopan at Treatment Period 1 and Danicopan at Treatment Period 2; P->D: Placebo at Treatment Period 1 and Danicopan at Treatment Period 2.

Change from baseline is summarized only for patients who have data at baseline and the specified time point.

Baseline is defined as the last non-missing value prior to the first dose of study drug.

Actual values for Total group is summarized only for baseline and the time points from Long Term Extension (LTE).

EORTC QLQ-C30 is European Organization for Research and Treatment of Cancer Quality of Life Questionnaire-Core 30 Scale. Symptom scales include fatigue, nausea and vomiting, pain, dyspnoea, insomnia, appetite loss, constipation, diarrhoea, and financial difficulties.

Each subscale has a range of 0 - 100%. A high scale score represents a higher response level. Thus a high score for a functional scale represents a high level of functioning but a high score for a symptom scale represents a high level of symptomatology/problem.

Patients were randomized to Danicopan or Placebo for 12 weeks as Treatment Period 1. At Week 12, patients randomized to Placebo were switched to Danicopan for an additional 12 weeks as Treatment Period 2 and patients randomized to Danicopan continued on Danicopan during Treatment Period 2. At the end of the Treatment Period 2 (Week 24), patients entered the Long Term Extension (LTE) Period and continue to receive Danicopan.

D->D: Danicopan at Treatment Period 1 and Danicopan at Treatment Period 2; P->D: Placebo at Treatment Period 1 and Danicopan at Treatment Period 2.

Change from baseline is summarized only for patients who have data at baseline and the specified time point.

Baseline is defined as the last non-missing value prior to the first dose of study drug.

Actual values for Total group is summarized only for baseline and the time points from Long Term Extension (LTE).

EORTC QLQ-C30 is European Organization for Research and Treatment of Cancer Quality of Life Questionnaire-Core 30 Scale. Symptom scales include fatigue, nausea and vomiting, pain, dyspnoea, insomnia, appetite loss, constipation, diarrhoea, and financial difficulties.

Each subscale has a range of 0 - 100%. A high scale score represents a higher response level. Thus a high score for a functional scale represents a high level of functioning but a high score for a symptom scale represents a high level of symptomatology/problem.

Patients were randomized to Danicopan or Placebo for 12 weeks as Treatment Period 1. At Week 12, patients randomized to Placebo were switched to Danicopan for an additional 12 weeks as Treatment Period 2 and patients randomized to Danicopan continued on Danicopan during Treatment Period 2. At the end of the Treatment Period 2 (Week 24), patients entered the Long Term Extension (LTE) Period and continue to receive Danicopan.

D->D: Danicopan at Treatment Period 1 and Danicopan at Treatment Period 2; P->D: Placebo at Treatment Period 1 and Danicopan at Treatment Period 2.

Change from baseline is summarized only for patients who have data at baseline and the specified time point.

Baseline is defined as the last non-missing value prior to the first dose of study drug.

Actual values for Total group is summarized only for baseline and the time points from Long Term Extension (LTE).

EORTC QLQ-C30 is European Organization for Research and Treatment of Cancer Quality of Life Questionnaire-Core 30 Scale. Symptom scales include fatigue, nausea and vomiting, pain, dyspnoea, insomnia, appetite loss, constipation, diarrhoea, and financial difficulties.

Each subscale has a range of 0 - 100%. A high scale score represents a higher response level. Thus a high score for a functional scale represents a high level of functioning but a high score for a symptom scale represents a high level of symptomatology/problem.

Patients were randomized to Danicopan or Placebo for 12 weeks as Treatment Period 1. At Week 12, patients randomized to Placebo were switched to Danicopan for an additional 12 weeks as Treatment Period 2 and patients randomized to Danicopan continued on Danicopan during Treatment Period 2. At the end of the Treatment Period 2 (Week 24), patients entered the Long Term Extension (LTE) Period and continue to receive Danicopan.

D->D: Danicopan at Treatment Period 1 and Danicopan at Treatment Period 2; P->D: Placebo at Treatment Period 1 and Danicopan at Treatment Period 2.

Change from baseline is summarized only for patients who have data at baseline and the specified time point.

Baseline is defined as the last non-missing value prior to the first dose of study drug.

Actual values for Total group is summarized only for baseline and the time points from Long Term Extension (LTE).

EORTC QLQ-C30 is European Organization for Research and Treatment of Cancer Quality of Life Questionnaire-Core 30 Scale. Symptom scales include fatigue, nausea and vomiting, pain, dyspnoea, insomnia, appetite loss, constipation, diarrhoea, and financial difficulties.

Each subscale has a range of 0 - 100%. A high scale score represents a higher response level. Thus a high score for a functional scale represents a high level of functioning but a high score for a symptom scale represents a high level of symptomatology/problem.

Patients were randomized to Danicopan or Placebo for 12 weeks as Treatment Period 1. At Week 12, patients randomized to Placebo were switched to Danicopan for an additional 12 weeks as Treatment Period 2 and patients randomized to Danicopan continued on Danicopan during Treatment Period 2. At the end of the Treatment Period 2 (Week 24), patients entered the Long Term Extension (LTE) Period and continue to receive Danicopan.

D->D: Danicopan at Treatment Period 1 and Danicopan at Treatment Period 2; P->D: Placebo at Treatment Period 1 and Danicopan at Treatment Period 2.

Change from baseline is summarized only for patients who have data at baseline and the specified time point.

Baseline is defined as the last non-missing value prior to the first dose of study drug.

Actual values for Total group is summarized only for baseline and the time points from Long Term Extension (LTE).

EORTC QLQ-C30 is European Organization for Research and Treatment of Cancer Quality of Life Questionnaire-Core 30 Scale. Symptom scales include fatigue, nausea and vomiting, pain, dyspnoea, insomnia, appetite loss, constipation, diarrhoea, and financial difficulties.

Each subscale has a range of 0 - 100%. A high scale score represents a higher response level. Thus a high score for a functional scale represents a high level of functioning but a high score for a symptom scale represents a high level of symptomatology/problem.

Patients were randomized to Danicopan or Placebo for 12 weeks as Treatment Period 1. At Week 12, patients randomized to Placebo were switched to Danicopan for an additional 12 weeks as Treatment Period 2 and patients randomized to Danicopan continued on Danicopan during Treatment Period 2. At the end of the Treatment Period 2 (Week 24), patients entered the Long Term Extension (LTE) Period and continue to receive Danicopan.

D->D: Danicopan at Treatment Period 1 and Danicopan at Treatment Period 2; P->D: Placebo at Treatment Period 1 and Danicopan at Treatment Period 2.

Change from baseline is summarized only for patients who have data at baseline and the specified time point.

Baseline is defined as the last non-missing value prior to the first dose of study drug.

Actual values for Total group is summarized only for baseline and the time points from Long Term Extension (LTE).

Median	0.00	0.00	16.67	8.33		
Min, Max	0.0, 100.0	-33.3, 16.7	0.0, 50.0	-33.3, 33.3		

EORTC QLQ-C30 is European Organization for Research and Treatment of Cancer Quality of Life Questionnaire-Core 30 Scale. Symptom scales include fatigue, nausea and vomiting, pain, dyspnoea, insomnia, appetite loss, constipation, diarrhoea, and financial difficulties.

Each subscale has a range of 0 - 100%. A high scale score represents a higher response level. Thus a high score for a functional scale represents a high level of functioning but a high score for a symptom scale represents a high level of symptomatology/problem.

Patients were randomized to Danicopan or Placebo for 12 weeks as Treatment Period 1. At Week 12, patients randomized to Placebo were switched to Danicopan for an additional 12 weeks as Treatment Period 2 and patients randomized to Danicopan continued on Danicopan during Treatment Period 2. At the end of the Treatment Period 2 (Week 24), patients entered the Long Term Extension (LTE) Period and continue to receive Danicopan.

D->D: Danicopan at Treatment Period 1 and Danicopan at Treatment Period 2; P->D: Placebo at Treatment Period 1 and Danicopan at Treatment Period 2.

Change from baseline is summarized only for patients who have data at baseline and the specified time point.

Baseline is defined as the last non-missing value prior to the first dose of study drug.

Actual values for Total group is summarized only for baseline and the time points from Long Term Extension (LTE).

At Week 12, patients randomized to Placebo were switched to Danicopan for an additional 12 weeks as Treatment Period 2 and patients randomized to Danicopan continued on Danicopan during Treatment Period 2. At the end of the Treatment Period 2 (Week 24), patients entered the Long Term Extension (LTE) Period and continue to receive Danicopan.

D->D: Danicopan at Treatment Period 1 and Danicopan at Treatment Period 2; P->D: Placebo at Treatment Period 1 and Danicopan at Treatment Period 2.

Change from baseline is summarized only for patients who have data at baseline and the specified time point.

Baseline is defined as the last non-missing value prior to the first dose of study drug.

Actual values for Total group is summarized only for baseline and the time points from Long Term Extension (LTE).

At Week 12, patients randomized to Placebo were switched to Danicopan for an additional 12 weeks as Treatment Period 2 and patients randomized to Danicopan continued on Danicopan during Treatment Period 2. At the end of the Treatment Period 2 (Week 24), patients entered the Long Term Extension (LTE) Period and continue to receive Danicopan.

D->D: Danicopan at Treatment Period 1 and Danicopan at Treatment Period 2; P->D: Placebo at Treatment Period 1 and Danicopan at Treatment Period 2. Change from baseline is summarized only for patients who have data at baseline and the specified time point.

Baseline is defined as the last non-missing value prior to the first dose of study drug.

Actual values for Total group is summarized only for baseline and the time points from Long Term Extension (LTE).

EORTC QLQ-C30 is European Organization for Research and Treatment of Cancer Quality of Life Questionnaire-Core 30 Scale. Symptom scales include fatigue, nausea and vomiting, pain, dyspnoea, insomnia, appetite loss, constipation, diarrhoea, and financial difficulties.

Each subscale has a range of 0 - 100%. A high scale score represents a higher response level. Thus a high score for a functional scale represents a high level of functioning but a high score for a symptom scale represents a high level of symptomatology/problem.

Patients were randomized to Danicopan or Placebo for 12 weeks as Treatment Period 1. At Week 12, patients randomized to Placebo were switched to Danicopan for an additional 12 weeks as Treatment Period 2 and patients randomized to Danicopan continued on Danicopan during Treatment Period 2. EORTC QLQ-C30 is European Organization for Research and Treatment of Cancer Quality of Life Questionnaire-Core 30 Scale. Symptom scales include fatigue, nausea and vomiting, pain, dyspnoea, insomnia, appetite loss, constipation, diarrhoea, and financial difficulties.

Each subscale has a range of 0 - 100%. A high scale score represents a higher response level. Thus a high score for a functional scale represents a high level of functioning but a high score for a symptom scale represents a high level of symptomatology/problem.

Patients were randomized to Danicopan or Placebo for 12 weeks as Treatment Period 1. At Week 12, patients randomized to Placebo were switched to Danicopan for an additional 12 weeks as Treatment Period 2 and patients randomized to Danicopan continued on Danicopan during Treatment Period 2. At the end of the Treatment Period 2 (Week 24), patients entered the Long Term Extension (LTE) Period and continue to receive Danicopan.

D->D: Danicopan at Treatment Period 1 and Danicopan at Treatment Period 2; P->D: Placebo at Treatment Period 1 and Danicopan at Treatment Period 2.

Change from baseline is summarized only for patients who have data at baseline and the specified time point.

Baseline is defined as the last non-missing value prior to the first dose of study drug.

Actual values for Total group is summarized only for baseline and the time points from Long Term Extension (LTE).

EORTC QLQ-C30 is European Organization for Research and Treatment of Cancer Quality of Life Questionnaire-Core 30 Scale. Symptom scales include fatigue, nausea and vomiting, pain, dyspnoea, insomnia, appetite loss, constipation, diarrhoea, and financial difficulties.

Each subscale has a range of 0 - 100%. A high scale score represents a higher response level. Thus a high score for a functional scale represents a high level of functioning but a high score for a symptom scale represents a high level of symptomatology/problem.

Patients were randomized to Danicopan or Placebo for 12 weeks as Treatment Period 1. At Week 12, patients randomized to Placebo were switched to Danicopan for an additional 12 weeks as Treatment Period 2 and patients randomized to Danicopan continued on Danicopan during Treatment Period 2. At the end of the Treatment Period 2 (Week 24), patients entered the Long Term Extension (LTE) Period and continue to receive Danicopan.

D->D: Danicopan at Treatment Period 1 and Danicopan at Treatment Period 2; P->D: Placebo at Treatment Period 1 and Danicopan at Treatment Period 2.

Change from baseline is summarized only for patients who have data at baseline and the specified time point.

Baseline is defined as the last non-missing value prior to the first dose of study drug.

Actual values for Total group is summarized only for baseline and the time points from Long Term Extension (LTE).

Change from baseline is summarized only for patients who have data at baseline and the specified time point.

Baseline is defined as the last non-missing value prior to the first dose of study drug.

Actual values for Total group is summarized only for baseline and the time points from Long Term Extension (LTE).

EORTC QLQ-C30 is European Organization for Research and Treatment of Cancer Quality of Life Questionnaire-Core 30 Scale. Symptom scales include fatigue, nausea and vomiting, pain, dyspnoea, insomnia, appetite loss, constipation, diarrhoea, and financial difficulties.

Each subscale has a range of 0 - 100%. A high scale score represents a higher response level. Thus a high score for a functional scale represents a high level of functioning but a high score for a symptom scale represents a high level of symptomatology/problem.

Patients were randomized to Danicopan or Placebo for 12 weeks as Treatment Period 1. At Week 12, patients randomized to Placebo were switched to Danicopan for an additional 12 weeks as Treatment Period 2 and patients randomized to Danicopan continued on Danicopan during Treatment Period 2. At the end of the Treatment Period 2 (Week 24), patients entered the Long Term Extension (LTE) Period and continue to receive Danicopan.

D->D: Danicopan at Treatment Period 1 and Danicopan at Treatment Period 2; P->D: Placebo at Treatment Period 1 and Danicopan at Treatment Period 2.

Change from baseline is summarized only for patients who have data at baseline and the specified time point.

Baseline is defined as the last non-missing value prior to the first dose of study drug.

EORTC QLQ-C30 is European Organization for Research and Treatment of Cancer Quality of Life Questionnaire-Core 30 Scale. Symptom scales include fatigue, nausea and vomiting, pain, dyspnoea, insomnia, appetite loss, constipation, diarrhoea, and financial difficulties.

Each subscale has a range of 0 - 100%. A high scale score represents a higher response level. Thus a high score for a functional scale represents a high level of functioning but a high score for a symptom scale represents a high level of symptomatology/problem.

Patients were randomized to Danicopan or Placebo for 12 weeks as Treatment Period 1. At Week 12, patients randomized to Placebo were switched to Danicopan for an additional 12 weeks as Treatment Period 2 and patients randomized to Danicopan continued on Danicopan during Treatment Period 2. At the end of the Treatment Period 2 (Week 24), patients entered the Long Term Extension (LTE) Period and continue to receive Danicopan.

D->D: Danicopan at Treatment Period 1 and Danicopan at Treatment Period 2; P->D: Placebo at Treatment Period 1 and Danicopan at Treatment Period 2.

Change from baseline is summarized only for patients who have data at baseline and the specified time point.

Baseline is defined as the last non-missing value prior to the first dose of study drug.

Actual values for Total group is summarized only for baseline and the time points from Long Term Extension (LTE).

EORTC QLQ-C30 is European Organization for Research and Treatment of Cancer Quality of Life Questionnaire-Core 30 Scale. Symptom scales include fatigue, nausea and vomiting, pain, dyspnoea, insomnia, appetite loss, constipation, diarrhoea, and financial difficulties.

Each subscale has a range of 0 - 100%. A high scale score represents a higher response level. Thus a high score for a functional scale represents a high level of functioning but a high score for a symptom scale represents a high level of symptomatology/problem.

Patients were randomized to Danicopan or Placebo for 12 weeks as Treatment Period 1. At Week 12, patients randomized to Placebo were switched to Danicopan for an additional 12 weeks as Treatment Period 2 and patients randomized to Danicopan continued on Danicopan during Treatment Period 2. At the end of the Treatment Period 2 (Week 24), patients entered the Long Term Extension (LTE) Period and continue to receive Danicopan.

D->D: Danicopan at Treatment Period 1 and Danicopan at Treatment Period 2; P->D: Placebo at Treatment Period 1 and Danicopan at Treatment Period 2. Change from baseline is summarized only for patients who have data at baseline and the specified time point.

Baseline is defined as the last non-missing value prior to the first dose of study drug.

Actual values for Total group is summarized only for baseline and the time points from Long Term Extension (LTE).

EORTC QLQ-C30 is European Organization for Research and Treatment of Cancer Quality of Life Questionnaire-Core 30 Scale. Symptom scales include fatigue, nausea and vomiting, pain, dyspnoea, insomnia, appetite loss, constipation, diarrhoea, and financial difficulties.

Each subscale has a range of 0 - 100%. A high scale score represents a higher response level. Thus a high score for a functional scale represents a high level of functioning but a high score for a symptom scale represents a high level of symptomatology/problem.

Patients were randomized to Danicopan or Placebo for 12 weeks as Treatment Period 1. At Week 12, patients randomized to Placebo were switched to Danicopan for an additional 12 weeks as Treatment Period 2 and patients randomized to Danicopan continued on Danicopan during Treatment Period 2. At the end of the Treatment Period 2 (Week 24), patients entered the Long Term Extension (LTE) Period and continue to receive Danicopan.

D->D: Danicopan at Treatment Period 1 and Danicopan at Treatment Period 2; P->D: Placebo at Treatment Period 1 and Danicopan at Treatment Period 2. Change from baseline is summarized only for patients who have data at baseline and the specified time point.

Baseline is defined as the last non-missing value prior to the first dose of study drug.

Actual values for Total group is summarized only for baseline and the time points from Long Term Extension (LTE).

EORTC QLQ-C30 is European Organization for Research and Treatment of Cancer Quality of Life Questionnaire-Core 30 Scale. Symptom scales include fatigue, nausea and vomiting, pain, dyspnoea, insomnia, appetite loss, constipation, diarrhoea, and financial difficulties.

Each subscale has a range of 0 - 100%. A high scale score represents a higher response level. Thus a high score for a functional scale represents a high level of functioning but a high score for a symptom scale represents a high level of symptomatology/problem.

Patients were randomized to Danicopan or Placebo for 12 weeks as Treatment Period 1. At Week 12, patients randomized to Placebo were switched to Danicopan for an additional 12 weeks as Treatment Period 2 and patients randomized to Danicopan continued on Danicopan during Treatment Period 2. At the end of the Treatment Period 2 (Week 24), patients entered the Long Term Extension (LTE) Period and continue to receive Danicopan.

D->D: Danicopan at Treatment Period 1 and Danicopan at Treatment Period 2; P->D: Placebo at Treatment Period 1 and Danicopan at Treatment Period 2. Change from baseline is summarized only for patients who have data at baseline and the specified time point.

Baseline is defined as the last non-missing value prior to the first dose of study drug.

Actual values for Total group is summarized only for baseline and the time points from Long Term Extension (LTE).

EORTC QLQ-C30 is European Organization for Research and Treatment of Cancer Quality of Life Questionnaire-Core 30 Scale. Symptom scales include fatigue, nausea and vomiting, pain, dyspnoea, insomnia, appetite loss, constipation, diarrhoea, and financial difficulties.

Each subscale has a range of 0 - 100%. A high scale score represents a higher response level. Thus a high score for a functional scale represents a high level of functioning but a high score for a symptom scale represents a high level of symptomatology/problem.

Patients were randomized to Danicopan or Placebo for 12 weeks as Treatment Period 1. At Week 12, patients randomized to Placebo were switched to Danicopan for an additional 12 weeks as Treatment Period 2 and patients randomized to Danicopan continued on Danicopan during Treatment Period 2. At the end of the Treatment Period 2 (Week 24), patients entered the Long Term Extension (LTE) Period and continue to receive Danicopan.

D->D: Danicopan at Treatment Period 1 and Danicopan at Treatment Period 2; P->D: Placebo at Treatment Period 1 and Danicopan at Treatment Period 2.

Change from baseline is summarized only for patients who have data at baseline and the specified time point.

Baseline is defined as the last non-missing value prior to the first dose of study drug.

Actual values for Total group is summarized only for baseline and the time points from Long Term Extension (LTE).

EORTC QLQ-C30 is European Organization for Research and Treatment of Cancer Quality of Life Questionnaire-Core 30 Scale. Symptom scales include fatigue, nausea and vomiting, pain, dyspnoea, insomnia, appetite loss, constipation, diarrhoea, and financial difficulties.

Each subscale has a range of 0 - 100%. A high scale score represents a higher response level. Thus a high score for a functional scale represents a high level of functioning but a high score for a symptom scale represents a high level of symptomatology/problem.

Patients were randomized to Danicopan or Placebo for 12 weeks as Treatment Period 1. At Week 12, patients randomized to Placebo were switched to Danicopan for an additional 12 weeks as Treatment Period 2 and patients randomized to Danicopan continued on Danicopan during Treatment Period 2. At the end of the Treatment Period 2 (Week 24), patients entered the Long Term Extension (LTE) Period and continue to receive Danicopan.

D->D: Danicopan at Treatment Period 1 and Danicopan at Treatment Period 2; P->D: Placebo at Treatment Period 1 and Danicopan at Treatment Period 2. Change from baseline is summarized only for patients who have data at baseline and the specified time point.

Baseline is defined as the last non-missing value prior to the first dose of study drug.

Actual values for Total group is summarized only for baseline and the time points from Long Term Extension (LTE).

Each subscale has a range of 0 - 100%. A high scale score represents a higher response level. Thus a high score for a functional scale represents a high level of functioning but a high score for a symptom scale represents a high level of symptomatology/problem.

Patients were randomized to Danicopan or Placebo for 12 weeks as Treatment Period 1. At Week 12, patients randomized to Placebo were switched to Danicopan for an additional 12 weeks as Treatment Period 2 and patients randomized to Danicopan continued on Danicopan during Treatment Period 2. At the end of the Treatment Period 2 (Week 24), patients entered the Long Term Extension (LTE) Period and continue to receive Danicopan.

D->D: Danicopan at Treatment Period 1 and Danicopan at Treatment Period 2; P->D: Placebo at Treatment Period 1 and Danicopan at Treatment Period 2.

Change from baseline is summarized only for patients who have data at baseline and the specified time point.

Baseline is defined as the last non-missing value prior to the first dose of study drug.

Actual values for Total group is summarized only for baseline and the time points from Long Term Extension (LTE).

EORTC QLQ-C30 is European Organization for Research and Treatment of Cancer Quality of Life Questionnaire-Core 30 Scale. Symptom scales include fatigue, nausea and vomiting, pain, dyspnoea, insomnia, appetite loss, constipation, diarrhoea, and financial difficulties.

Each subscale has a range of 0 - 100%. A high scale score represents a higher response level. Thus a high score for a functional scale represents a high level of functioning but a high score for a symptom scale represents a high level of symptomatology/problem.

Patients were randomized to Danicopan or Placebo for 12 weeks as Treatment Period 1. At Week 12, patients randomized to Placebo were switched to Danicopan for an additional 12 weeks as Treatment Period 2 and patients randomized to Danicopan continued on Danicopan during Treatment Period 2. At the end of the Treatment Period 2 (Week 24), patients entered the Long Term Extension (LTE) Period and continue to receive Danicopan.

D->D: Danicopan at Treatment Period 1 and Danicopan at Treatment Period 2; P->D: Placebo at Treatment Period 1 and Danicopan at Treatment Period 2.

Change from baseline is summarized only for patients who have data at baseline and the specified time point.

Baseline is defined as the last non-missing value prior to the first dose of study drug.

Actual values for Total group is summarized only for baseline and the time points from Long Term Extension (LTE).

EORTC QLQ-C30 is European Organization for Research and Treatment of Cancer Quality of Life Questionnaire-Core 30 Scale. Symptom scales include fatigue, nausea and vomiting, pain, dyspnoea, insomnia, appetite loss, constipation, diarrhoea, and financial difficulties.

Each subscale has a range of 0 - 100%. A high scale score represents a higher response level. Thus a high score for a functional scale represents a high level of functioning but a high score for a symptom scale represents a high level of symptomatology/problem.

Patients were randomized to Danicopan or Placebo for 12 weeks as Treatment Period 1. At Week 12, patients randomized to Placebo were switched to Danicopan for an additional 12 weeks as Treatment Period 2 and patients randomized to Danicopan continued on Danicopan during Treatment Period 2. At the end of the Treatment Period 2 (Week 24), patients entered the Long Term Extension (LTE) Period and continue to receive Danicopan.

D->D: Danicopan at Treatment Period 1 and Danicopan at Treatment Period 2; P->D: Placebo at Treatment Period 1 and Danicopan at Treatment Period 2. Change from baseline is summarized only for patients who have data at baseline and the specified time point.

Baseline is defined as the last non-missing value prior to the first dose of study drug.

Actual values for Total group is summarized only for baseline and the time points from Long Term Extension (LTE).

EORTC QLQ-C30 is European Organization for Research and Treatment of Cancer Quality of Life Questionnaire-Core 30 Scale. Symptom scales include fatigue, nausea and vomiting, pain, dyspnoea, insomnia, appetite loss, constipation, diarrhoea, and financial difficulties.

Each subscale has a range of 0 - 100%. A high scale score represents a higher response level. Thus a high score for a functional scale represents a high level of functioning but a high score for a symptom scale represents a high level of symptomatology/problem.

Patients were randomized to Danicopan or Placebo for 12 weeks as Treatment Period 1. At Week 12, patients randomized to Placebo were switched to Danicopan for an additional 12 weeks as Treatment Period 2 and patients randomized to Danicopan continued on Danicopan during Treatment Period 2. At the end of the Treatment Period 2 (Week 24), patients entered the Long Term Extension (LTE) Period and continue to receive Danicopan.

D->D: Danicopan at Treatment Period 1 and Danicopan at Treatment Period 2; P->D: Placebo at Treatment Period 1 and Danicopan at Treatment Period 2. Change from baseline is summarized only for patients who have data at baseline and the specified time point.

Baseline is defined as the last non-missing value prior to the first dose of study drug.

Actual values for Total group is summarized only for baseline and the time points from Long Term Extension (LTE).

Min, Max	0.0, 100.0	-33.3, 33.3	0.0, 100.0	-33.3, 66.7		

EORTC QLQ-C30 is European Organization for Research and Treatment of Cancer Quality of Life Questionnaire-Core 30 Scale. Symptom scales include fatigue, nausea and vomiting, pain, dyspnoea, insomnia, appetite loss, constipation, diarrhoea, and financial difficulties.

Each subscale has a range of 0 - 100%. A high scale score represents a higher response level. Thus a high score for a functional scale represents a high level of functioning but a high score for a symptom scale represents a high level of symptomatology/problem.

Patients were randomized to Danicopan or Placebo for 12 weeks as Treatment Period 1. At Week 12, patients randomized to Placebo were switched to Danicopan for an additional 12 weeks as Treatment Period 2 and patients randomized to Danicopan continued on Danicopan during Treatment Period 2. At the end of the Treatment Period 2 (Week 24), patients entered the Long Term Extension (LTE) Period and continue to receive Danicopan.

D->D: Danicopan at Treatment Period 1 and Danicopan at Treatment Period 2; P->D: Placebo at Treatment Period 1 and Danicopan at Treatment Period 2. Change from baseline is summarized only for patients who have data at baseline and the specified time point.

Baseline is defined as the last non-missing value prior to the first dose of study drug.

Actual values for Total group is summarized only for baseline and the time points from Long Term Extension (LTE).

Each subscale has a range of 0 - 100%. A high scale score represents a higher response level. Thus a high score for a functional scale represents a high level of functioning but a high score for a symptom scale represents a high level of symptomatology/problem.

Patients were randomized to Danicopan or Placebo for 12 weeks as Treatment Period 1. At Week 12, patients randomized to Placebo were switched to Danicopan for an additional 12 weeks as Treatment Period 2 and patients randomized to Danicopan continued on Danicopan during Treatment Period 2. At the end of the Treatment Period 2 (Week 24), patients entered the Long Term Extension (LTE) Period and continue to receive Danicopan.

D->D: Danicopan at Treatment Period 1 and Danicopan at Treatment Period 2; P->D: Placebo at Treatment Period 1 and Danicopan at Treatment Period 2. Change from baseline is summarized only for patients who have data at baseline and the specified time point.

Baseline is defined as the last non-missing value prior to the first dose of study drug.

Actual values for Total group is summarized only for baseline and the time points from Long Term Extension (LTE).

EORTC QLQ-C30 is European Organization for Research and Treatment of Cancer Quality of Life Questionnaire-Core 30 Scale. Symptom scales include fatigue, nausea and vomiting, pain, dyspnoea, insomnia, appetite loss, constipation, diarrhoea, and financial difficulties.

Each subscale has a range of 0 - 100%. A high scale score represents a higher response level. Thus a high score for a functional scale represents a high level of functioning but a high score for a symptom scale represents a high level of symptomatology/problem.

Patients were randomized to Danicopan or Placebo for 12 weeks as Treatment Period 1. At Week 12, patients randomized to Placebo were switched to Danicopan for an additional 12 weeks as Treatment Period 2 and patients randomized to Danicopan continued on Danicopan during Treatment Period 2. At the end of the Treatment Period 2 (Week 24), patients entered the Long Term Extension (LTE) Period and continue to receive Danicopan.

D->D: Danicopan at Treatment Period 1 and Danicopan at Treatment Period 2; P->D: Placebo at Treatment Period 1 and Danicopan at Treatment Period 2.

Change from baseline is summarized only for patients who have data at baseline and the specified time point.

Baseline is defined as the last non-missing value prior to the first dose of study drug.

Actual values for Total group is summarized only for baseline and the time points from Long Term Extension (LTE).

EORTC QLQ-C30 is European Organization for Research and Treatment of Cancer Quality of Life Questionnaire-Core 30 Scale. Symptom scales include fatigue, nausea and vomiting, pain, dyspnoea, insomnia, appetite loss, constipation, diarrhoea, and financial difficulties.

Each subscale has a range of 0 - 100%. A high scale score represents a higher response level. Thus a high score for a functional scale represents a high level of functioning but a high score for a symptom scale represents a high level of symptomatology/problem.

Patients were randomized to Danicopan or Placebo for 12 weeks as Treatment Period 1. At Week 12, patients randomized to Placebo were switched to Danicopan for an additional 12 weeks as Treatment Period 2 and patients randomized to Danicopan continued on Danicopan during Treatment Period 2. At the end of the Treatment Period 2 (Week 24), patients entered the Long Term Extension (LTE) Period and continue to receive Danicopan.

D->D: Danicopan at Treatment Period 1 and Danicopan at Treatment Period 2; P->D: Placebo at Treatment Period 1 and Danicopan at Treatment Period 2. Change from baseline is summarized only for patients who have data at baseline and the specified time point.

Baseline is defined as the last non-missing value prior to the first dose of study drug.

Actual values for Total group is summarized only for baseline and the time points from Long Term Extension (LTE).

Mean (SD)	33.33 (NA)	-33.33 (NA)			33.33 (NA)	-33.33 (NA)
Median	33.33	-33.33			33.33	-33.33
Min, Max	33.3, 33.3	-33.3, -33.3			33.3, 33.3	-33.3, -33.3

EORTC QLQ-C30 is European Organization for Research and Treatment of Cancer Quality of Life Questionnaire-Core 30 Scale. Symptom scales include fatigue, nausea and vomiting, pain, dyspnoea, insomnia, appetite loss, constipation, diarrhoea, and financial difficulties.

Each subscale has a range of 0 - 100%. A high scale score represents a higher response level. Thus a high score for a functional scale represents a high level of functioning but a high score for a symptom scale represents a high level of symptomatology/problem.

Patients were randomized to Danicopan or Placebo for 12 weeks as Treatment Period 1. At Week 12, patients randomized to Placebo were switched to Danicopan for an additional 12 weeks as Treatment Period 2 and patients randomized to Danicopan continued on Danicopan during Treatment Period 2. At the end of the Treatment Period 2 (Week 24), patients entered the Long Term Extension (LTE) Period and continue to receive Danicopan.

D->D: Danicopan at Treatment Period 1 and Danicopan at Treatment Period 2; P->D: Placebo at Treatment Period 1 and Danicopan at Treatment Period 2.

Change from baseline is summarized only for patients who have data at baseline and the specified time point.

Baseline is defined as the last non-missing value prior to the first dose of study drug.

Actual values for Total group is summarized only for baseline and the time points from Long Term Extension (LTE).

EORTC QLQ-C30 is European Organization for Research and Treatment of Cancer Quality of Life Questionnaire-Core 30 Scale. Symptom scales include fatigue, nausea and vomiting, pain, dyspnoea, insomnia, appetite loss, constipation, diarrhoea, and financial difficulties.

Each subscale has a range of 0 - 100%. A high scale score represents a higher response level. Thus a high score for a functional scale represents a high level of functioning but a high score for a symptom scale represents a high level of symptomatology/problem.

Patients were randomized to Danicopan or Placebo for 12 weeks as Treatment Period 1. At Week 12, patients randomized to Placebo were switched to Danicopan for an additional 12 weeks as Treatment Period 2 and patients randomized to Danicopan continued on Danicopan during Treatment Period 2. At the end of the Treatment Period 2 (Week 24), patients entered the Long Term Extension (LTE) Period and continue to receive Danicopan.

D->D: Danicopan at Treatment Period 1 and Danicopan at Treatment Period 2; P->D: Placebo at Treatment Period 1 and Danicopan at Treatment Period 2. Change from baseline is summarized only for patients who have data at baseline and the specified time point.

Baseline is defined as the last non-missing value prior to the first dose of study drug.

Actual values for Total group is summarized only for baseline and the time points from Long Term Extension (LTE).

Table GERMANY.2.5.4.8

Summary of Actual Values and Change from Baseline in EORTC QLQ-C30 Scores Symptom Scales During Treatment Period 1 and Period 2 and Long Term Extension by the Randomization Stratification Factors of Japanese Patients (Patients Enrolled from Japan [Yes/No])
Modified Randomized Set

Diarrhea

Patients Enrolled from Japan Yes

Visit/Statistics	D->D (N=8)		P->D (N=4)		Total (N=12)	
	Actual Value	Change from Baseline	Actual Value	Change from Baseline	Actual Value	Change from Baseline
Week 12						
n	8	8	4	4		
Mean (SD)	4.17 (11.785)	4.17 (11.785)	8.33 (16.667)	8.33 (16.667)		
Median	0.00	0.00	0.00	0.00		
Min, Max	0.0, 33.3	0.0, 33.3	0.0, 33.3	0.0, 33.3		
Week 24						
n	8	8	4	4		
Mean (SD)	8.33 (15.430)	8.33 (15.430)	0.00 (0.000)	0.00 (0.000)		
Median	0.00	0.00	0.00	0.00		
Min, Max	0.0, 33.3	0.0, 33.3	0.0, 0.0	0.0, 0.0		

EORTC QLQ-C30 is European Organization for Research and Treatment of Cancer Quality of Life Questionnaire-Core 30 Scale. Symptom scales include fatigue, nausea and vomiting, pain, dyspnoea, insomnia, appetite loss, constipation, diarrhoea, and financial difficulties. Each subscale has a range of 0 - 100%. A high scale score represents a higher response level. Thus a high score for a functional scale represents a high level of functioning but a high score for a symptom scale represents a high level of symptomatology/problem. Patients were randomized to Danicopan or Placebo for 12 weeks as Treatment Period 1. At Week 12, patients randomized to Placebo were switched to Danicopan for an additional 12 weeks as Treatment Period 2 and patients randomized to Danicopan continued on Danicopan during Treatment Period 2. At the end of the Treatment Period 2 (Week 24), patients entered the Long Term Extension (LTE) Period and continue to receive Danicopan. D->D: Danicopan at Treatment Period 1 and Danicopan at Treatment Period 2; P->D: Placebo at Treatment Period 1 and Danicopan at Treatment Period 2. Change from baseline is summarized only for patients who have data at baseline and the specified time point. Baseline is defined as the last non-missing value prior to the first dose of study drug. Actual values for Total group is summarized only for baseline and the time points from Long Term Extension (LTE).
