Summary of Time to Onset of TEAE by SOC/PT by Sex
Safety Population
TEAE in SOC Term **Metabolism and nutrition disorders** and Preferred Term **Hyperuricaemia**
Female

Statistics	Placebo + BSC N=90	Fruquintinib + BSC N=215
Kaplan-Meier Estimates at % (95% CI)		
3 months	98.9 (96.7, 100.0)	97.5 (95.4, 99.7)
6 months	98.9 (96.7, 100.0)	96.7 (94.0, 99.4)
9 months	NE (NE, NE)	96.7 (94.0, 99.4)
12 months	NE (NE, NE)	96.7 (94.0, 99.4)
18 months	NE (NE, NE)	96.7 (94.0, 99.4)
Median Follow-up Time (months)	2.83	3.78

* indicates censored value.
Note: The adjusted HR and its 95% CI are estimated using unstratified Cox's proportional hazards model in which the randomization schedule stratification factors and treatment group are covariates.
P-value is calculated using the stratified log-rank test.
Follow-up time (months) is calculated as ((last dose date + 37 days) – first dose date + 1)/30.4375.
Note: Percentages are based on the number of subjects in each treatment group unless otherwise specified.
BSC=Best supportive care; CI=Confidence interval; HR=Hazard ratio; Max=Maximum; Min=Minimum; SE=Standard error.

TEAE in SOC Term **Investigations** and Preferred Term **Alanine aminotransferase increased**
ECOG: 1

Statistics	Placebo + BSC N=128	Fruquintinib + BSC N=263
Kaplan-Meier Estimates at % (95% CI)		
3 months	95.2 (91.4, 98.9)	88.7 (84.6, 92.8)
6 months	81.6 (56.7, 100.0)	87.0 (82.3, 91.6)
9 months	NE (NE, NE)	84.5 (77.9, 91.1)
12 months	NE (NE, NE)	84.5 (77.9, 91.1)
18 months	NE (NE, NE)	84.5 (77.9, 91.1)
Median Follow-up Time (months)	2.56	3.06

* indicates censored value.
Note: The adjusted HR and its 95% CI are estimated using unstratified Cox's proportional hazards model in which the randomization schedule stratification factors and treatment group are covariates.
P-value is calculated using the stratified log-rank test.
Follow-up time (months) is calculated as ((last dose date + 37 days) – first dose date + 1)/30.4375.
Note: Percentages are based on the number of subjects in each treatment group unless otherwise specified.
BSC=Best supportive care; CI=Confidence interval; HR=Hazard ratio; Max=Maximum; Min=Minimum; SE=Standard error.

TEAE in SOC Term **Gastrointestinal disorders** and Preferred Term **Stomatitis**
Rectum

Statistics	Placebo + BSC N=69	Fruquintinib + BSC N=141
Number of Subjects with Events, n (%)	3 (4.3)	18 (12.8)
Number of Subjects Censored, n (%)	66 (95.7)	123 (87.2)
Time to first TEAE (months)		
25% percentile (95% CI)	NE (NE, NE)	NE (NE, NE)
Median (95% CI)	NE (NE, NE)	NE (NE, NE)
75% percentile (95% CI)	NE (NE, NE)	NE (NE, NE)
Min, Max	0.2*, 13.0*	0.3, 18.6*
Comparison (Fruquintinib + BSC vs Placebo + BSC)		
Hazard Ratio (SE)		2.600 (0.629)
95% CI		(0.758, 8.919)
Log-rank p-value		0.129

* indicates censored value.
Note: The adjusted HR and its 95% CI are estimated using unstratified Cox's proportional hazards model in which the randomization schedule stratification factors and treatment group are covariates.
P-value is calculated using the stratified log-rank test.
Follow-up time (months) is calculated as ((last dose date + 37 days) – first dose date + 1)/30.4375.
Note: Percentages are based on the number of subjects in each treatment group unless otherwise specified.
BSC=Best supportive care; CI=Confidence interval; HR=Hazard ratio; Max=Maximum; Min=Minimum; SE=Standard error.

Median Follow-up Time (months)	2.83	2.86

* indicates censored value.
Note: The adjusted HR and its 95% CI are estimated using unstratified Cox's proportional hazards model in which the randomization schedule stratification factors and treatment group are covariates.
P-value is calculated using the stratified log-rank test.
Follow-up time (months) is calculated as ((last dose date + 37 days) – first dose date + 1)/30.4375.
Note: Percentages are based on the number of subjects in each treatment group unless otherwise specified.
BSC=Best supportive care; CI=Confidence interval; HR=Hazard ratio; Max=Maximum; Min=Minimum; SE=Standard error.

Table 35.1.1.6.1.3G
Summary of Time to Onset of TEAE by SOC/PT by Primary Tumor Site at 1st Diagnosis
Safety Population
TEAE in SOC Term **General disorders and administration site conditions** and Preferred Term **Condition aggravated**
Colon and Rectum

Statistics	Placebo + BSC N=23	Fruquintinib + BSC N=39
Number of Subjects with Events, n (%)	1 (4.3)	1 (2.6)
Number of Subjects Censored, n (%)	22 (95.7)	38 (97.4)
Time to first TEAE (months)		
25% percentile (95% CI)	NE (2.83, NE)	NE (NE, NE)
Median (95% CI)	NE (NE, NE)	NE (NE, NE)
75% percentile (95% CI)	NE (NE, NE)	NE (NE, NE)
Min, Max	1.3*, 8.4*	0.9*, 20.1*
Comparison (Fruquintinib + BSC vs Placebo + BSC)		
Hazard Ratio (SE)		0.621 (1.503)
95% CI		(0.033, 11.826)
Log-rank p-value		0.844

* indicates censored value.
