Two-sided stratified log-rank p-value			0.4201

Abbreviations: BPI-SF=Brief Pain Inventory - Short Form; CI=confidence interval; EV=enfortumab vedotin; Gem=gemcitabine; HR=hazard ratio; MID=minimal important difference; mITT=modified intent-to-treat; N=number of patients; NC=not calculated; Pembro=pembrolizumab; Plat=cisplatin or carboplatin.
Note: The stratification factors are programmed cell death ligand-1 (PD-L1) expression (high [CPS>=10] or low [CPS<10]), liver metastases (present or absent), age (<65 or >=65 years), sex and region (North America, Europe, Rest of World). If a subgroup is identified as a stratification factor, the models will only be controlled for the other stratification factor.
Time to first deterioration is defined as time from randomization to the first observation with a >=2 point increase before subsequent anticancer treatment. Otherwise, censoring date is the date of the last available assessment of the parameter before subsequent anticancer treatment (if any).
Patients with no baseline and/or no post-baseline assessments as well as patients whose baseline scores do not allow for further deterioration are censored at the date of randomization.
(a) Estimated from the Kaplan-Meier Method; (b) Calculated using the log-log transformation according to Kalbfleisch and Prentice and Greenwood's formula for computing the standard error of the survival estimate; (c) Based on the Brookmeyer-Crowley Method.

Time to first deterioration is defined as time from randomization to the first observation with a >=2 point increase before subsequent anticancer treatment. Otherwise, censoring date is the date of the last available assessment of the parameter before subsequent anticancer treatment (if any).
Patients with no baseline and/or no post-baseline assessments as well as patients whose baseline scores do not allow for further deterioration are censored at the date of randomization.
(a) Based on the Brookmeyer-Crowley Method; (b) Calculated from stratified Cox proportional hazards model; (c) Based on 2-sided stratified log-rank test, unadjusted for multiplicity; (d) Two-sided Type 3 Wald test p-value from Cox proportional hazards model including treatment, subgroup, and treatment x subgroup interaction.
ASTELLAS Data Cutoff Date: 08AUG2023

Abbreviations: BPI-SF=Brief Pain Inventory - Short Form; CI=confidence interval; EV=enfortumab vedotin; Gem=gemcitabine; HR=hazard ratio; KME=Kaplan-Meier Estimate (median) of time to event (months); MID=minimal important difference; mITT=modified intent-to-treat; N=number of patients; n=number of patients with event; NC=not calculated; Pembro=pembrolizumab; Plat=cisplatin or carboplatin.
Note: The stratification factors are programmed cell death ligand-1 (PD-L1) expression (high [CPS>=10] or low [CPS<10]), liver metastases (present or absent), age (<65 or >=65 years), sex and region (North America, Europe, Rest of World). If a subgroup is identified as a stratification factor, the models will only be controlled for the other stratification factor.
Time to first deterioration is defined as time from randomization to the first observation with a >=2 point increase before subsequent anticancer treatment. Otherwise, censoring date is the date of the last available assessment of the parameter before subsequent anticancer treatment (if any).
Patients with no baseline and/or no post-baseline assessments as well as patients whose baseline scores do not allow for further deterioration are censored at the date of randomization.
(a) Based on the Brookmeyer-Crowley Method; (b) Calculated from stratified Cox proportional hazards model; (c) Based on 2-sided stratified log-rank test, unadjusted for multiplicity; (d) Two-sided Type 3 Wald test p-value from Cox proportional hazards model including treatment, subgroup, and treatment x subgroup interaction.

Composite endpoint=worst pain (Question 3) or initiation of new opioid medication for pain. Time to first deterioration is defined as time from randomization to the first observation with a >=2 point increase or initiation of new opioid medication for pain before subsequent anticancer treatment. Otherwise, censoring date is the date of the last available assessment of the parameter before subsequent anticancer treatment (if any).
Patients with no baseline and/or no post-baseline assessments as well as patients whose baseline scores do not allow for further deterioration are censored at the date of randomization.
(a) Based on the Brookmeyer-Crowley Method; (b) Calculated from stratified Cox proportional hazards model; (c) Based on 2-sided stratified log-rank test, unadjusted for multiplicity; (d) Two-sided Type 3 Wald test p-value from Cox proportional hazards model including treatment, subgroup, and treatment x subgroup interaction.
ASTELLAS Data Cutoff Date: 08AUG2023

Abbreviations: CI=confidence interval; EORTC QLQ-C30=European Organisation for Research and Treatment of Cancer Quality of Life Questionnaire-Core 30; EV=enfortumab vedotin; Gem=gemcitabine; HR=hazard ratio; KME=Kaplan-Meier Estimate (median) of time to event (months); MID=minimal important difference; mITT=modified intent-to-treat; N=number of patients; n=number of patients with event; Pembro=pembrolizumab; Plat=cisplatin or carboplatin; QoL=quality of life.

Note: The stratification factors are programmed cell death ligand-1 (PD-L1) expression (high [CPS>=10] or low [CPS<10]), liver metastases (present or absent), age (<65 or >=65 years), sex and region (North America, Europe, Rest of World). If a subgroup is identified as a stratification factor, the models will only be controlled for the other stratification factor.

Time to first deterioration is defined as time from randomization to the first observation with a >=10 point decrease before subsequent anticancer treatment. Otherwise, censoring date is the date of the last available assessment of the parameter before subsequent anticancer treatment (if any).

Patients with no baseline and/or no post-baseline assessments as well as patients whose baseline scores do not allow for further deterioration are censored at the date of randomization.

(a) Based on the Brookmeyer-Crowley Method; (b) Calculated from stratified Cox proportional hazards model; (c) Based on 2-sided stratified log-rank test, unadjusted for multiplicity; (d) Two-sided Type 3 Wald test p-value from Cox proportional hazards model including treatment, subgroup, and treatment x subgroup interaction.

Abbreviations: CI=confidence interval; EORTC QLQ-C30=European Organisation for Research and Treatment of Cancer Quality of Life Questionnaire-Core 30; EV=enfortumab vedotin; Gem=gemcitabine; HR=hazard ratio; KME=Kaplan-Meier Estimate (median) of time to event (months); MID=minimal important difference; mITT=modified intent-to-treat; N=number of patients; n=number of patients with event; Pembro=pembrolizumab; Plat=cisplatin or carboplatin.

Note: The stratification factors are programmed cell death ligand-1 (PD-L1) expression (high [CPS>=10] or low [CPS<10]), liver metastases (present or absent), age (<65 or >=65 years), sex and region (North America, Europe, Rest of World). If a subgroup is identified as a stratification factor, the models will only be controlled for the other stratification factor.

Time to first deterioration is defined as time from randomization to the first observation with a >=10 point decrease before subsequent anticancer treatment. Otherwise, censoring date is the date of the last available assessment of the parameter before subsequent anticancer treatment (if any).

Patients with no baseline and/or no post-baseline assessments as well as patients whose baseline scores do not allow for further deterioration are censored at the date of randomization.

(a) Based on the Brookmeyer-Crowley Method; (b) Calculated from stratified Cox proportional hazards model; (c) Based on 2-sided stratified log-rank test, unadjusted for multiplicity; (d) Two-sided Type 3 Wald test p-value from Cox proportional hazards model including treatment, subgroup, and treatment x subgroup interaction.

Abbreviations: CI=confidence interval; EORTC QLQ-C30=European Organisation for Research and Treatment of Cancer Quality of Life Questionnaire-Core 30; EV=enfortumab vedotin; Gem=gemcitabine; HR=hazard ratio; KME=Kaplan-Meier Estimate (median) of time to event (months); MID=minimal important difference; mITT=modified intent-to-treat; N=number of patients; n=number of patients with event; Pembro=pembrolizumab; Plat=cisplatin or carboplatin.

Note: The stratification factors are programmed cell death ligand-1 (PD-L1) expression (high [CPS>=10] or low [CPS<10]), liver metastases (present or absent), age (<65 or >=65 years), sex and region (North America, Europe, Rest of World). If a subgroup is identified as a stratification factor, the models will only be controlled for the other stratification factor.

Time to first deterioration is defined as time from randomization to the first observation with a >=10 point decrease before subsequent anticancer treatment. Otherwise, censoring date is the date of the last available assessment of the parameter before subsequent anticancer treatment (if any).

Patients with no baseline and/or no post-baseline assessments as well as patients whose baseline scores do not allow for further deterioration are censored at the date of randomization.

(a) Based on the Brookmeyer-Crowley Method; (b) Calculated from stratified Cox proportional hazards model; (c) Based on 2-sided stratified log-rank test, unadjusted for multiplicity; (d) Two-sided Type 3 Wald test p-value from Cox proportional hazards model including treatment, subgroup, and treatment x subgroup interaction.

Note: The stratification factors are programmed cell death ligand-1 (PD-L1) expression (high [CPS>=10] or low [CPS<10]), liver metastases (present or absent), age (<65 or >=65 years), sex and region (North America, Europe, Rest of World). If a subgroup is identified as a stratification factor, the models will only be controlled for the other stratification factor.
Time to first deterioration is defined as time from randomization to the first observation with a >=10 point decrease before subsequent anticancer treatment. Otherwise, censoring date is the date of the last available assessment of the parameter before subsequent anticancer treatment (if any).
Patients with no baseline and/or no post-baseline assessments as well as patients whose baseline scores do not allow for further deterioration are censored at the date of randomization.
(a) Estimated from the Kaplan-Meier Method; (b) Calculated using the log-log transformation according to Kalbfleisch and Prentice and Greenwood's formula for computing the standard error of the survival estimate; (c) Based on the Brookmeyer-Crowley Method.

Month 18	9.2 [4.8, 15.5]	9.6 [4.4, 17.2]	
Month 24	NC [NC, NC]	NC [NC, NC]	
Kaplan-Meier estimates of time to event (months)			
Median [95% CI] (c)	0.6 [0.4, 0.8]	0.4 [0.4, 0.6]	
Cox proportional hazards model			
Stratified HR [95% CI]			0.777 [0.587, 1.028]
Log-rank test			
Two-sided stratified log-rank p-value			0.0740

Abbreviations: CI=confidence interval; EORTC QLQ-C30=European Organisation for Research and Treatment of Cancer Quality of Life Questionnaire-Core 30; EV=enfortumab vedotin; Gem=gemcitabine; HR=hazard ratio; MID=minimal important difference; mITT=modified intent-to-treat; N=number of patients; Pembro=pembrolizumab; Plat=cisplatin or carboplatin.
Note: The stratification factors are programmed cell death ligand-1 (PD-L1) expression (high [CPS>=10] or low [CPS<10]), liver metastases (present or absent), age (<65 or >=65 years), sex and region (North America, Europe, Rest of World). If a subgroup is identified as a stratification factor, the models will only be controlled for the other stratification factor.
Time to first deterioration is defined as time from randomization to the first observation with a >=10 point increase before subsequent anticancer treatment. Otherwise, censoring date is the date of the last available assessment of the parameter before subsequent anticancer treatment (if any).
Patients with no baseline and/or no post-baseline assessments as well as patients whose baseline scores do not allow for further deterioration are censored at the date of randomization.
(a) Estimated from the Kaplan-Meier Method; (b) Calculated using the log-log transformation according to Kalbfleisch and Prentice and Greenwood's formula for computing the standard error of the survival estimate; (c) Based on the Brookmeyer-Crowley Method.

Note: The stratification factors are programmed cell death ligand-1 (PD-L1) expression (high [CPS>=10] or low [CPS<10]), liver metastases (present or absent), age (<65 or >=65 years), sex and region (North America, Europe, Rest of World). If a subgroup is identified as a stratification factor, the models will only be controlled for the other stratification factor.

Time to first deterioration is defined as time from randomization to the first observation with a >=10 point increase before subsequent anticancer treatment. Otherwise, censoring date is the date of the last available assessment of the parameter before subsequent anticancer treatment (if any).

Patients with no baseline and/or no post-baseline assessments as well as patients whose baseline scores do not allow for further deterioration are censored at the date of randomization.

(a) Based on the Brookmeyer-Crowley Method; (b) Calculated from stratified Cox proportional hazards model; (c) Based on 2-sided stratified log-rank test, unadjusted for multiplicity; (d) Two-sided Type 3 Wald test p-value from Cox proportional hazards model including treatment, subgroup, and treatment x subgroup interaction.

Abbreviations: CI=confidence interval; EORTC QLQ-C30=European Organisation for Research and Treatment of Cancer Quality of Life Questionnaire-Core 30; EV=enfortumab vedotin; Gem=gemcitabine; HR=hazard ratio; KME=Kaplan-Meier Estimate (median) of time to event (months); MID=minimal important difference; mITT=modified intent-to-treat; N=number of patients; n=number of patients with event; Pembro=pembrolizumab; Plat=cisplatin or carboplatin.

Note: The stratification factors are programmed cell death ligand-1 (PD-L1) expression (high [CPS>=10] or low [CPS<10]), liver metastases (present or absent), age (<65 or >=65 years), sex and region (North America, Europe, Rest of World). If a subgroup is identified as a stratification factor, the models will only be controlled for the other stratification factor.

Time to first deterioration is defined as time from randomization to the first observation with a >=10 point increase before subsequent anticancer treatment. Otherwise, censoring date is the date of the last available assessment of the parameter before subsequent anticancer treatment (if any).

Patients with no baseline and/or no post-baseline assessments as well as patients whose baseline scores do not allow for further deterioration are censored at the date of randomization.

(a) Based on the Brookmeyer-Crowley Method; (b) Calculated from stratified Cox proportional hazards model; (c) Based on 2-sided stratified log-rank test, unadjusted for multiplicity; (d) Two-sided Type 3 Wald test p-value from Cox proportional hazards model including treatment, subgroup, and treatment x subgroup interaction.

Abbreviations: CI=confidence interval; EORTC QLQ-C30=European Organisation for Research and Treatment of Cancer Quality of Life Questionnaire-Core 30; EV=enfortumab vedotin; Gem=gemcitabine; HR=hazard ratio; KME=Kaplan-Meier Estimate (median) of time to event (months); MID=minimal important difference; mITT=modified intent-to-treat; N=number of patients; n=number of patients with event; Pembro=pembrolizumab; Plat=cisplatin or carboplatin.

Note: The stratification factors are programmed cell death ligand-1 (PD-L1) expression (high [CPS>=10] or low [CPS<10]), liver metastases (present or absent), age (<65 or >=65 years), sex and region (North America, Europe, Rest of World). If a subgroup is identified as a stratification factor, the models will only be controlled for the other stratification factor.

Time to first deterioration is defined as time from randomization to the first observation with a >=10 point increase before subsequent anticancer treatment. Otherwise, censoring date is the date of the last available assessment of the parameter before subsequent anticancer treatment (if any).

Patients with no baseline and/or no post-baseline assessments as well as patients whose baseline scores do not allow for further deterioration are censored at the date of randomization.

(a) Based on the Brookmeyer-Crowley Method; (b) Calculated from stratified Cox proportional hazards model; (c) Based on 2-sided stratified log-rank test, unadjusted for multiplicity; (d) Two-sided Type 3 Wald test p-value from Cox proportional hazards model including treatment, subgroup, and treatment x subgroup interaction.

Abbreviations: CI=confidence interval; EORTC QLQ-C30=European Organisation for Research and Treatment of Cancer Quality of Life Questionnaire-Core 30; EV=enfortumab vedotin; Gem=gemcitabine; HR=hazard ratio; KME=Kaplan-Meier Estimate (median) of time to event (months); MID=minimal important difference; mITT=modified intent-to-treat; N=number of patients; n=number of patients with event; Pembro=pembrolizumab; Plat=cisplatin or carboplatin.

Note: The stratification factors are programmed cell death ligand-1 (PD-L1) expression (high [CPS>=10] or low [CPS<10]), liver metastases (present or absent), age (<65 or >=65 years), sex and region (North America, Europe, Rest of World). If a subgroup is identified as a stratification factor, the models will only be controlled for the other stratification factor.

Time to first deterioration is defined as time from randomization to the first observation with a >=10 point increase before subsequent anticancer treatment. Otherwise, censoring date is the date of the last available assessment of the parameter before subsequent anticancer treatment (if any).

Patients with no baseline and/or no post-baseline assessments as well as patients whose baseline scores do not allow for further deterioration are censored at the date of randomization.

(a) Based on the Brookmeyer-Crowley Method; (b) Calculated from stratified Cox proportional hazards model; (c) Based on 2-sided stratified log-rank test, unadjusted for multiplicity; (d) Two-sided Type 3 Wald test p-value from Cox proportional hazards model including treatment, subgroup, and treatment x subgroup interaction.

If a subgroup is identified as a stratification factor, the models will only be controlled for the other stratification factor.
Time to first deterioration is defined as time from randomization to the first observation with a >=10 point increase before subsequent anticancer treatment. Otherwise, censoring date is the date of the last available assessment of the parameter before subsequent anticancer treatment (if any).
Patients with no baseline and/or no post-baseline assessments as well as patients whose baseline scores do not allow for further deterioration are censored at the date of randomization.
(a) Estimated from the Kaplan-Meier Method; (b) Calculated using the log-log transformation according to Kalbfleisch and Prentice and Greenwood's formula for computing the standard error of the survival estimate; (c) Based on the Brookmeyer-Crowley Method.

Kaplan-Meier estimates of time to event (months)			
Median [95% CI] (c)	2.5 [1.3, 5.2]	2.2 [1.5, 3.2]	
Cox proportional hazards model			
Stratified HR [95% CI]			1.012 [0.772, 1.327]
Log-rank test			
Two-sided stratified log-rank p-value			0.9625

Abbreviations: CI=confidence interval; EQ-5D-5L=European Quality of Life 5 dimensions 5 level; EV=enfortumab vedotin; Gem=gemcitabine; HR=hazard ratio; MID=minimal important difference; mITT=modified intent-to-treat; N=number of patients; Pembro=pembrolizumab; Plat=cisplatin or carboplatin; VAS=visual analogue scale.

Note: The stratification factors are programmed cell death ligand-1 (PD-L1) expression (high [CPS>=10] or low [CPS<10]), liver metastases (present or absent), age (<65 or >=65 years), sex and region (North America, Europe, Rest of World). If a subgroup is identified as a stratification factor, the models will only be controlled for the other stratification factor.

Time to first deterioration is defined as time from randomization to the first observation with a >=15 point decrease before subsequent anticancer treatment. Otherwise, censoring date is the date of the last available assessment of the parameter before subsequent anticancer treatment (if any).

Patients with no baseline and/or no post-baseline assessments as well as patients whose baseline scores do not allow for further deterioration are censored at the date of randomization.

(a) Estimated from the Kaplan-Meier Method; (b) Calculated using the log-log transformation according to Kalbfleisch and Prentice and Greenwood's formula for computing the standard error of the survival estimate; (c) Based on the Brookmeyer-Crowley Method.

ASTELLAS Data Cutoff Date: 08AUG2023

Lymph node only	60	7 (11.7)	NC [NC, NC]	65	1 (1.5)	NC [NC, NC]	5.363 [0.627, 45.907]	0.0855	

Abbreviations: CI=confidence interval; EV=enfortumab vedotin; Gem=gemcitabine; HR=hazard ratio; KME=Kaplan-Meier Estimate of time to event (months); mSAF=modified safety analysis set; N=number of patients; n=number of events; NC=not calculated; Pembro=pembrolizumab; Plat=cisplatin or carboplatin; SOC=system organ classes; TEAE=treatment-emergent adverse event.
Note: The analysis were conducted unstratified.
Time to event duration is defined as date of first exposure to treatment to start date of first AE + 1 day. Censoring date is defined as min(data cutoff date, date of last dose of study treatment + 30 days, death date).
(a) Based on the Brookmeyer-Crowley Method; (b) Calculated from unstratified Cox proportional hazards model; (c) Based on 2-sided stratified log-rank test, unadjusted for multiplicity; (d) Two-sided Type 3 Wald test p-value from Cox proportional hazards model including treatment, subgroup, and treatment x subgroup interaction.
ASTELLAS Data Cutoff Date: 08AUG2023

Abbreviations: CI=confidence interval; EV=enfortumab vedotin; Gem=gemcitabine; HR=hazard ratio; mSAF=modified safety analysis set; N=number of patients; NC=not calculated; Pembro=pembrolizumab; Plat=cisplatin or carboplatin; PT=preferred term; TEAE=treatment-emergent adverse event.
Note: The analysis were conducted unstratified.
Time to event duration is defined as date of first exposure to treatment to start date of first AE + 1 day. Censoring date is defined as min(data cutoff date, date of last dose of study treatment + 30 days, death date).
(a) Estimated from the Kaplan-Meier Method; (b) Calculated using the log-log transformation according to Kalbfleisch and Prentice and Greenwood's formula for computing the standard error of the survival estimate; (c) Based on the Brookmeyer-Crowley Method.
ASTELLAS Data Cutoff Date: 08AUG2023

Unstratified HR [95% CI]			1.493 [0.544, 4.101]
Log-rank test			
Two-sided unstratified log-rank p-value			0.4341

Abbreviations: CI=confidence interval; EV=enfortumab vedotin; Gem=gemcitabine; HR=hazard ratio; mSAF=modified safety analysis set; N=number of patients; NC=not calculated; Pembro=pembrolizumab; Plat=cisplatin or carboplatin; SOC=system organ classes; TEAE=treatment-emergent adverse event.
Note: The analysis were conducted unstratified.
Time to event duration is defined as date of first exposure to treatment to start date of first AE + 1 day. Censoring date is defined as min(data cutoff date, date of last dose of study treatment + 30 days, death date).
(a) Estimated from the Kaplan-Meier Method; (b) Calculated using the log-log transformation according to Kalbfleisch and Prentice and Greenwood's formula for computing the standard error of the survival estimate; (c) Based on the Brookmeyer-Crowley Method.
ASTELLAS Data Cutoff Date: 08AUG2023

Median [95% CI] (c)	NC [NC, NC]	NC [NC, NC]	
Cox proportional hazards model			
Unstratified HR [95% CI]			3.216 [1.294, 7.991]
Log-rank test			
Two-sided unstratified log-rank p-value			0.0078

Abbreviations: CI=confidence interval; EV=enfortumab vedotin; Gem=gemcitabine; HR=hazard ratio; mSAF=modified safety analysis set; N=number of patients; NC=not calculated; Pembro=pembrolizumab; Plat=cisplatin or carboplatin; SOC=system organ classes; TESAE=treatment-emergent serious adverse event.
Note: The analysis were conducted unstratified.
Time to event duration is defined as date of first exposure to treatment to start date of first AE + 1 day. Censoring date is defined as min(data cutoff date, date of last dose of study treatment + 30 days, death date) for Plat+Gem and min(data cutoff date, date of last dose of study treatment + 90 days, death date) for EV+Pembro (if no anticancer therapy started).
In case a new anticancer therapy was initiated between 1 and 30 days after last dose of treatment medication, censoring date was defined as min(data cutoff date, date of last dose of study treatment + 30 days, death date). In case a new anticancer therapy was initiated between 31 and 90 days after last dose of treatment medication, censoring date was defined as min(data cutoff date, date of new anticancer treatment, death date).
(a) Estimated from the Kaplan-Meier Method; (b) Calculated using the log-log transformation according to Kalbfleisch and Prentice and Greenwood's formula for computing the standard error of the survival estimate; (c) Based on the Brookmeyer-Crowley Method.

Number of patients at risk	239 (100.0%)	236 (100.0%)	
Number of patients with events	5 (2.1%)	6 (2.5%)	
Number of patients censored	234 (97.9%)	230 (97.5%)	
Probability of being event-free (a) [95% CI] (b) at:			
Month 3	98.7 [96.2, 99.6]	97.7 [94.6, 99.0]	
Month 6	97.7 [94.5, 99.0]	97.1 [93.7, 98.7]	
Month 9	97.7 [94.5, 99.0]	NC [NC, NC]	
Month 12	97.7 [94.5, 99.0]	NC [NC, NC]	
Month 18	97.7 [94.5, 99.0]	NC [NC, NC]	
Month 24	97.7 [94.5, 99.0]	NC [NC, NC]	
Kaplan-Meier estimates of time to event (months)			
Median [95% CI] (c)	NC [NC, NC]	NC [NC, NC]	
Cox proportional hazards model			
Unstratified HR [95% CI]			0.492 [0.128, 1.884]
Log-rank test			
Two-sided unstratified log-rank p-value			0.2916

Abbreviations: CI=confidence interval; EV=enfortumab vedotin; Gem=gemcitabine; HR=hazard ratio; mSAF=modified safety analysis set; N=number of patients; NC=not calculated; Pembro=pembrolizumab; Plat=cisplatin or carboplatin; SOC=system organ classes; TESAE=treatment-emergent serious adverse event.
Note: The analysis were conducted unstratified.
Time to event duration is defined as date of first exposure to treatment to start date of first AE + 1 day. Censoring date is defined as min(data cutoff date, date of last dose of study treatment + 30 days, death date) for Plat+Gem and min(data cutoff date, date of last dose of study treatment + 90 days, death date) for EV+Pembro (if no anticancer therapy started).
In case a new anticancer therapy was initiated between 1 and 30 days after last dose of treatment medication, censoring date was defined as min(data cutoff date, date of last dose of study treatment + 30 days, death date). In case a new anticancer therapy was initiated between 31 and 90 days after last dose of treatment medication, censoring date was defined as min(data cutoff date, date of new anticancer treatment, death date).
(a) Estimated from the Kaplan-Meier Method; (b) Calculated using the log-log transformation according to Kalbfleisch and Prentice and Greenwood's formula for computing the standard error of the survival estimate; (c) Based on the Brookmeyer-Crowley Method.
ASTELLAS Data Cutoff Date: 08AUG2023

Unstratified HR [95% CI]			0.082 [0.046, 0.147]
Log-rank test			
Two-sided unstratified log-rank p-value			<.0001

Abbreviations: CI=confidence interval; CTCAE=common terminology criteria of adverse events; EV=enfortumab vedotin; Gem=gemcitabine; HR=hazard ratio; mSAF=modified safety analysis set; N=number of patients; NC=not calculated; Pembro=pembrolizumab; Plat=cisplatin or carboplatin; SOC=system organ classes; TEAE=treatment-emergent adverse event.
Note: The analysis were conducted unstratified.
Time to event duration is defined as date of first exposure to treatment to start date of first AE + 1 day. Censoring date is defined as min(data cutoff date, date of last dose of study treatment + 30 days, death date).
(a) Estimated from the Kaplan-Meier Method; (b) Calculated using the log-log transformation according to Kalbfleisch and Prentice and Greenwood's formula for computing the standard error of the survival estimate; (c) Based on the Brookmeyer-Crowley Method.
ASTELLAS Data Cutoff Date: 08AUG2023

Note: The analysis were conducted unstratified.
Time to event duration is defined as date of first exposure to treatment to start date of first AE + 1 day. Censoring date is defined as min(data cutoff date, date of last dose of study treatment + 30 days, death date).
(a) Estimated from the Kaplan-Meier Method; (b) Calculated using the log-log transformation according to Kalbfleisch and Prentice and Greenwood's formula for computing the standard error of the survival estimate; (c) Based on the Brookmeyer-Crowley Method.
ASTELLAS Data Cutoff Date: 08AUG2023

Log-rank test			
Two-sided unstratified log-rank p-value			<.0001

Abbreviations: CI=confidence interval; CTCAE=common terminology criteria of adverse events; EV=enfortumab vedotin; Gem=gemcitabine; HR=hazard ratio; mSAF=modified safety analysis set; N=number of patients; NC=not calculated; Pembro=pembrolizumab; Plat=cisplatin or carboplatin; TEAESI=treatment-emergent adverse event of special interest.
Note: The analysis were conducted unstratified.
Time to event duration is defined as date of first exposure to treatment to start date of first AE + 1 day. Censoring date is defined as min(data cutoff date, date of last dose of study treatment + 30 days, death date).
(a) Estimated from the Kaplan-Meier Method; (b) Calculated using the log-log transformation according to Kalbfleisch and Prentice and Greenwood's formula for computing the standard error of the survival estimate; (c) Based on the Brookmeyer-Crowley Method.
ASTELLAS Data Cutoff Date: 08AUG2023

Abbreviations: CI=confidence interval; EV=enfortumab vedotin; Gem=gemcitabine; HR=hazard ratio; KME=Kaplan-Meier Estimate of time to event (months); mSAF=modified safety analysis set; N=number of patients; n=number of events; NC=not calculated; Pembro=pembrolizumab; Plat=cisplatin or carboplatin; TEAESI=treatment-emergent adverse event of special interest.
Note: The analysis were conducted unstratified.
Time to event duration is defined as date of first exposure to treatment to start date of first AE + 1 day. Censoring date is defined as min(data cutoff date, date of last dose of study treatment + 30 days, death date).
(a) Based on the Brookmeyer-Crowley Method; (b) Calculated from unstratified Cox proportional hazards model; (c) Based on 2-sided stratified log-rank test, unadjusted for multiplicity; (d) Two-sided Type 3 Wald test p-value from Cox proportional hazards model including treatment, subgroup, and treatment x subgroup interaction.
ASTELLAS Data Cutoff Date: 08AUG2023

	EV+Pembro (N= 201)	Plat+Gem (N= 197)	EV+Pembro vs. Plat+Gem
Number of patients at risk	201 (100.0%)	197 (100.0%)	
Number of patients with events	22 (10.9%)	95 (48.2%)	
Number of patients censored	179 (89.1%)	102 (51.8%)	
Probability of being event-free (a) [95% CI] (b) at:			
Month 3	93.0 [88.3, 95.9]	52.9 [45.4, 59.8]	
Month 6	90.6 [85.2, 94.0]	48.0 [40.3, 55.3]	
Month 9	89.9 [84.3, 93.5]	NC [NC, NC]	
Month 12	87.8 [81.4, 92.1]	NC [NC, NC]	
Month 18	84.3 [75.8, 90.0]	NC [NC, NC]	
Month 24	84.3 [75.8, 90.0]	NC [NC, NC]	
Kaplan-Meier estimates of time to event (months)			
Median [95% CI] (c)	NC [NC, NC]	3.6 [1.8, NC]	
Cox proportional hazards model			
Unstratified HR [95% CI]			0.120 [0.071, 0.202]
Log-rank test			
Two-sided unstratified log-rank p-value			<.0001

Abbreviations: CI=confidence interval; EV=enfortumab vedotin; Gem=gemcitabine; HR=hazard ratio; mSAF=modified safety analysis set; N=number of patients; NC=not calculated; Pembro=pembrolizumab; Plat=cisplatin or carboplatin; PT=preferred term; TEAE=treatment-emergent adverse event.
Note: The analysis were conducted unstratified.
Time to event duration is defined as date of first exposure to treatment to start date of first AE + 1 day. Censoring date is defined as min(data cutoff date, date of last dose of study treatment + 30 days, death date).
(a) Estimated from the Kaplan-Meier Method; (b) Calculated using the log-log transformation according to Kalbfleisch and Prentice and Greenwood's formula for computing the standard error of the survival estimate; (c) Based on the Brookmeyer-Crowley Method.

Unstratified HR [95% CI]			0.898 [0.705, 1.144]
Log-rank test			
Two-sided unstratified log-rank p-value			0.3916

Abbreviations: CI=confidence interval; EV=enfortumab vedotin; Gem=gemcitabine; HR=hazard ratio; mSAF=modified safety analysis set; N=number of patients; NC=not calculated; Pembro=pembrolizumab; Plat=cisplatin or carboplatin; SOC=system organ classes; TEAE=treatment-emergent adverse event.
Note: The analysis were conducted unstratified.
Time to event duration is defined as date of first exposure to treatment to start date of first AE + 1 day. Censoring date is defined as min(data cutoff date, date of last dose of study treatment + 30 days, death date).
(a) Estimated from the Kaplan-Meier Method; (b) Calculated using the log-log transformation according to Kalbfleisch and Prentice and Greenwood's formula for computing the standard error of the survival estimate; (c) Based on the Brookmeyer-Crowley Method.
ASTELLAS Data Cutoff Date: 08AUG2023

Abbreviations: CI=confidence interval; EV=enfortumab vedotin; Gem=gemcitabine; HR=hazard ratio; mSAF=modified safety analysis set; N=number of patients; NC=not calculated; Pembro=pembrolizumab; Plat=cisplatin or carboplatin; PT=preferred term; TEAE=treatment-emergent adverse event.
Note: The analysis were conducted unstratified.
Time to event duration is defined as date of first exposure to treatment to start date of first AE + 1 day. Censoring date is defined as min(data cutoff date, date of last dose of study treatment + 30 days, death date).
(a) Estimated from the Kaplan-Meier Method; (b) Calculated using the log-log transformation according to Kalbfleisch and Prentice and Greenwood's formula for computing the standard error of the survival estimate; (c) Based on the Brookmeyer-Crowley Method.
ASTELLAS Data Cutoff Date: 08AUG2023

Cox proportional hazards model			
Unstratified HR [95% CI]			6.812 [1.549, 29.962]
Log-rank test			
Two-sided unstratified log-rank p-value			0.0033

Abbreviations: CI=confidence interval; EV=enfortumab vedotin; Gem=gemcitabine; HR=hazard ratio; mSAF=modified safety analysis set; N=number of patients; NC=not calculated; Pembro=pembrolizumab; Plat=cisplatin or carboplatin; PT=preferred term; TEAE=treatment-emergent adverse event.
Note: The analysis were conducted unstratified.
Time to event duration is defined as date of first exposure to treatment to start date of first AE + 1 day. Censoring date is defined as min(data cutoff date, date of last dose of study treatment + 30 days, death date).
(a) Estimated from the Kaplan-Meier Method; (b) Calculated using the log-log transformation according to Kalbfleisch and Prentice and Greenwood's formula for computing the standard error of the survival estimate; (c) Based on the Brookmeyer-Crowley Method.

	EV+Pembro (N= 201)	Plat+Gem (N= 197)	EV+Pembro vs. Plat+Gem
Number of patients at risk	201 (100.0%)	197 (100.0%)	
Number of patients with events	30 (14.9%)	27 (13.7%)	
Number of patients censored	171 (85.1%)	170 (86.3%)	
Probability of being event-free (a) [95% CI] (b) at:			
Month 3	92.5 [87.7, 95.5]	86.7 [80.8, 90.9]	
Month 6	86.2 [80.0, 90.5]	84.4 [78.0, 89.1]	
Month 9	84.6 [78.2, 89.3]	NC [NC, NC]	
Month 12	83.6 [76.8, 88.6]	NC [NC, NC]	
Month 18	77.5 [67.1, 85.0]	NC [NC, NC]	
Month 24	77.5 [67.1, 85.0]	NC [NC, NC]	
Kaplan-Meier estimates of time to event (months)			
Median [95% CI] (c)	NC [NC, NC]	NC [NC, NC]	
Cox proportional hazards model			
Unstratified HR [95% CI]			0.700 [0.400, 1.227]
Log-rank test			
Two-sided unstratified log-rank p-value			0.2106

Abbreviations: CI=confidence interval; EV=enfortumab vedotin; Gem=gemcitabine; HR=hazard ratio; mSAF=modified safety analysis set; N=number of patients; NC=not calculated; Pembro=pembrolizumab; Plat=cisplatin or carboplatin; SOC=system organ classes; TEAE=treatment-emergent adverse event.
Note: The analysis were conducted unstratified.
Time to event duration is defined as date of first exposure to treatment to start date of first AE + 1 day. Censoring date is defined as min(data cutoff date, date of last dose of study treatment + 30 days, death date).
(a) Estimated from the Kaplan-Meier Method; (b) Calculated using the log-log transformation according to Kalbfleisch and Prentice and Greenwood's formula for computing the standard error of the survival estimate; (c) Based on the Brookmeyer-Crowley Method.
ASTELLAS Data Cutoff Date: 08AUG2023

Time to event duration is defined as date of first exposure to treatment to start date of first AE + 1 day. Censoring date is defined as min(data cutoff date, date of last dose of study treatment + 30 days, death date) for Plat+Gem and min(data cutoff date, date of last dose of study treatment + 90 days, death date) for EV+Pembro (if no anticancer therapy started).
In case a new anticancer therapy was initiated between 1 and 30 days after last dose of treatment medication, censoring date was defined as min(data cutoff date, date of last dose of study treatment + 30 days, death date). In case a new anticancer therapy was initiated between 31 and 90 days after last dose of treatment medication, censoring date was defined as min(data cutoff date, date of new anticancer treatment, death date).
(a) Based on the Brookmeyer-Crowley Method; (b) Calculated from unstratified Cox proportional hazards model; (c) Based on 2-sided stratified log-rank test, unadjusted for multiplicity; (d) Two-sided Type 3 Wald test p-value from Cox proportional hazards model including treatment, subgroup, and treatment x subgroup interaction.
ASTELLAS Data Cutoff Date: 08AUG2023

Table 302.1.2002.127.2.1: Summary and Results of TESAEs - Respiratory, thoracic and mediastinal disorders (SOC) - Analysis Set mSAF 2

	EV+Pembro (N= 201)	Plat+Gem (N= 197)	EV+Pembro vs. Plat+Gem
Number of patients at risk	201 (100.0%)	197 (100.0%)	
Number of patients with events	13 (6.5%)	11 (5.6%)	
Number of patients censored	188 (93.5%)	186 (94.4%)	
Probability of being event-free (a) [95% CI] (b) at:			
Month 3	96.4 [92.6, 98.3]	95.7 [91.6, 97.8]
