Two-sided unstratified log-rank p-value			<.0001

Abbreviations: CI=confidence interval; CTCAE=common terminology criteria of adverse events; EV=enfortumab vedotin; Gem=gemcitabine; HR=hazard ratio; mSAF=modified safety analysis set; N=number of patients; NC=not calculated; Pembro=pembrolizumab; Plat=cisplatin or carboplatin; PT=preferred term; TEAE=treatment-emergent adverse event.
Note: The analysis were conducted unstratified.
Time to event duration is defined as date of first exposure to treatment to start date of first AE + 1 day. Censoring date is defined as min(data cutoff date, date of last dose of study treatment + 30 days, death date).
(a) Estimated from the Kaplan-Meier Method; (b) Calculated using the log-log transformation according to Kalbfleisch and Prentice and Greenwood's formula for computing the standard error of the survival estimate; (c) Based on the Brookmeyer-Crowley Method.
ASTELLAS Data Cutoff Date: 08AUG2023

Unstratified HR [95% CI]			3.048 [0.993, 9.358]
Log-rank test			
Two-sided unstratified log-rank p-value			0.0405

Abbreviations: CI=confidence interval; CTCAE=common terminology criteria of adverse events; EV=enfortumab vedotin; Gem=gemcitabine; HR=hazard ratio; mSAF=modified safety analysis set; N=number of patients; NC=not calculated; Pembro=pembrolizumab; Plat=cisplatin or carboplatin; PT=preferred term; TEAE=treatment-emergent adverse event.
Note: The analysis were conducted unstratified.
Time to event duration is defined as date of first exposure to treatment to start date of first AE + 1 day. Censoring date is defined as min(data cutoff date, date of last dose of study treatment + 30 days, death date).
(a) Estimated from the Kaplan-Meier Method; (b) Calculated using the log-log transformation according to Kalbfleisch and Prentice and Greenwood's formula for computing the standard error of the survival estimate; (c) Based on the Brookmeyer-Crowley Method.

Abbreviations: CI=confidence interval; CTCAE=common terminology criteria of adverse events; EV=enfortumab vedotin; Gem=gemcitabine; HR=hazard ratio; KME=Kaplan-Meier Estimate of time to event (months); mSAF=modified safety analysis set; N=number of patients; n=number of events; NC=not calculated; Pembro=pembrolizumab; Plat=cisplatin or carboplatin; TEAESI=treatment-emergent adverse event of special interest.
Note: The analysis were conducted unstratified.
Time to event duration is defined as date of first exposure to treatment to start date of first AE + 1 day. Censoring date is defined as min(data cutoff date, date of last dose of study treatment + 30 days, death date).
(a) Based on the Brookmeyer-Crowley Method; (b) Calculated from unstratified Cox proportional hazards model; (c) Based on 2-sided stratified log-rank test, unadjusted for multiplicity; (d) Two-sided Type 3 Wald test p-value from Cox proportional hazards model including treatment, subgroup, and treatment x subgroup interaction.
ASTELLAS Data Cutoff Date: 08AUG2023

Note: The analysis were conducted unstratified.
Time to event duration is defined as date of first exposure to treatment to start date of first AE + 1 day. Censoring date is defined as min(data cutoff date, date of last dose of study treatment + 30 days, death date) for Plat+Gem and min(data cutoff date, date of last dose of study treatment + 90 days, death date) for EV+Pembro (if no anticancer therapy started).
In case a new anticancer therapy was initiated between 1 and 30 days after last dose of treatment medication, censoring date was defined as min(data cutoff date, date of last dose of study treatment + 30 days, death date). In case a new anticancer therapy was initiated between 31 and 90 days after last dose of treatment medication, censoring date was defined as min(data cutoff date, date of new anticancer treatment, death date).
(a) Estimated from the Kaplan-Meier Method; (b) Calculated using the log-log transformation according to Kalbfleisch and Prentice and Greenwood's formula for computing the standard error of the survival estimate; (c) Based on the Brookmeyer-Crowley Method.

Abbreviations: CI=confidence interval; EV=enfortumab vedotin; Gem=gemcitabine; HR=hazard ratio; KME=Kaplan-Meier Estimate of time to event (months); mSAF=modified safety analysis set; N=number of patients; n=number of events; NC=not calculated; Pembro=pembrolizumab; Plat=cisplatin or carboplatin; TESAESI=treatment-emergent serious adverse event of special interest.
Note: The analysis were conducted unstratified.
Time to event duration is defined as date of first exposure to treatment to start date of first AE + 1 day. Censoring date is defined as min(data cutoff date, date of last dose of study treatment + 30 days, death date) for Plat+Gem and min(data cutoff date, date of last dose of study treatment + 90 days, death date) for EV+Pembro (if no anticancer therapy started).
In case a new anticancer therapy was initiated between 1 and 30 days after last dose of treatment medication, censoring date was defined as min(data cutoff date, date of last dose of study treatment + 30 days, death date). In case a new anticancer therapy was initiated between 31 and 90 days after last dose of treatment medication, censoring date was defined as min(data cutoff date, date of new anticancer treatment, death date).
(a) Based on the Brookmeyer-Crowley Method; (b) Calculated from unstratified Cox proportional hazards model; (c) Based on 2-sided stratified log-rank test, unadjusted for multiplicity; (d) Two-sided Type 3 Wald test p-value from Cox proportional hazards model including treatment, subgroup, and treatment x subgroup interaction.
ASTELLAS Data Cutoff Date: 08AUG2023

Note: The analysis were conducted unstratified.
Time to event duration is defined as date of first exposure to treatment to start date of first AE + 1 day. Censoring date is defined as min(data cutoff date, date of last dose of study treatment + 30 days, death date).
(a) Estimated from the Kaplan-Meier Method; (b) Calculated using the log-log transformation according to Kalbfleisch and Prentice and Greenwood's formula for computing the standard error of the survival estimate; (c) Based on the Brookmeyer-Crowley Method.
ASTELLAS Data Cutoff Date: 08AUG2023

Abbreviations: # at Risk=number of patients at risk; CI=confidence interval; EQ-5D-5L=European Quality of Life 5 dimensions 5 level; EV=enfortumab vedotin; Gem=gemcitabine; MID=minimal important difference; mITT=modified intent-to-treat; N=number of patients; Pembro=pembrolizumab; Plat=cisplatin or carboplatin; VAS=visual analogue scale.

Note: Time to first deterioration is defined as time from randomization to the first observation with a >=15 point decrease before subsequent anticancer treatment. Otherwise, censoring date is the date of the last available assessment of the parameter before subsequent anticancer treatment (if any).

Patients with no baseline and/or no post-baseline assessments as well as patients whose baseline scores do not allow for further deterioration are censored at the date of randomization.

Abbreviations: CI=confidence interval; EV=enfortumab vedotin; Gem=gemcitabine; HR=hazard ratio; mSAF=modified safety analysis set; N=number of patients; Pembro=pembrolizumab; Plat=cisplatin or carboplatin; TESAESI=treatment-emergent serious adverse event of special interest.

Note: Time to event duration is defined as date of first exposure to treatment to start date of first AE + 1 day. Censoring date is defined as min(data cutoff date, date of last dose of study treatment + 30 days, death date) for Plat+Gem and min(data cutoff date, date of last dose of study treatment + 90 days, death date) for EV+Pembro (if no anticancer therapy started).

In case a new anticancer therapy was initiated between 1 and 30 days after last dose of treatment medication, censoring date was defined as min(data cutoff date, date of last dose of study treatment + 30 days, death date). In case a new anticancer therapy was initiated between 31 and 90 days after last dose of treatment medication, censoring date was defined as min(data cutoff date, date of new anticancer treatment, death date).
